Collaborative, Trusted and Privacy-Aware e/m-Services Christos Douligeris. Nineta Polemi. Athanasios Karantijas. Winfried Lamersdorf, 2013-04-20 This book constitutes the refereed conference proceedings of the 12th IFIP WG 6.11 Conference on e-Business, e-Services and e-Society, I3E 2013, held in Athens, Greece, in April 2013. The 25 revised papers presented together with a keynote speech were carefully reviewed and selected from numerous submissions. They are organized in the following topical sections: trust and privacy; security, access control and legal requirements in cloud systems; protocols, regulation and social networking; adoption issues in e/m-services; new services adoption and ecological behavior; knowledge management and business processes; and management, policies and technologies in e/mservices.

Independent Evaluation Report Ruben Lamdany,2013-04-15

The IMF carries out its mandate to foster macroeconomic stability and thereby facilitate prosperity by promoting the adoption of sound policies and international cooperation. Ultimately, the means to achieve these goals is to have Fund policy advice translated into concrete action. Key to achieving such traction is the relationship

between Fund staff and member country authorities, together with the quality of the advice and members' confidence in it. That is, the Fund needs to be seen as a trusted advisor. This evaluation examines in what circumstances the Fund is viewed as a trusted advisor to its member countries. It uses evidence gathered since 2005, but emphasizes the period since the onset of the global crisis in 2007–08. Because the concept of trusted advisor is "in the eyes of the beholder," the evaluation derives the main attributes from country authorities themselves.

The Trusted Leader Robert M. Galford, Anne Seibold
Drapeau, 2003-01-09 As today's headlines remind us, trust is the hot-button issue in business today, especially for investors, managers, workers, and consumers. More than ever before, the success of an organization depends on leadership that fosters strong connections across teams and among bosses, colleagues, and subordinates. Companies are in urgent need of trusted leaders, but how can managers meet that need? Be trustworthy is the short, logical answer, of course. But being trustworthy and building trust in an organization are not one and the same thing. The former is an inherent part of a person; the latter requires developed talent and considerable skill. Based on highly specific

research and experience that covers a wide spectrum of managers and organizations, The Trusted Leader identifies the three critical types of trust that leaders need to master: strategic trust. organizational trust, and personal trust. It introduces a practical and effective formula for building organizational confidence, and provides a unique analysis of the obstacles to trust and the sources of resistance to the building of trust inside organizations. Through a series of interactive exercises, executives will learn how to determine where trust is missing and how it can be supplemented in people, departments, and even whole companies. Perhaps most timely are the book's series of diagnostic tools and skills that help executives rebuild trust that has been broken or betrayed. As business insiders and authors Robert Galford and Anne Seibold Drapeau show, trust inside a company provides focus, fuels passion, fosters innovation, and helps employers to hire and retain the best employees. Trust inside, the authors argue, also builds trust outside by gaining credibility with today's skeptical consumer. Trust is all too frequently overlooked in other leadership books, and is even more important today as companies face uncertain customer demands and the pressures to compete successfully in a whiplash market. Crises, restructurings, mergers,

downturns, and executive departures are often trust-destroyers. The Trusted Leader examines those defining moments, and helps leaders turn such situations into trust-building experiences, creating a culture and legacy of trust throughout the organization at large. Rich in true stories, examples, and practical advice, The Trusted Leader guides leaders on how to climb the ladder of trust and how to secure their legacy as trusted leaders. For managers of all levels, The Trusted Leader is the only comprehensive guide for building trust inside an organization -- the key to every company's long-term survival and success.

Trusted Systems Liqun Chen,Moti Yung,2010-07-10 This volume contains the 16 papers presented at the INTRUST 2009 conf- ence, held in Beijing, China in December 2009. INTRUST 2009 was the ?rst international conference on the theory, technologies and applications of trusted systems. It was devoted to all aspects of trusted computing systems, incl- ing trusted modules, platforms, networks, services and applications, from their fundamental features and functionalities to design principles, architecture and implementation technologies. The goal of the conference was to bring academic and industrial researchers, designers and implementers together with end-users of trusted

systems, in order to foster the exchange of ideas in this challenging and fruitful area. The program consisted of 3 invited talks and 20 contributed papers. The - vited speakerswere Wenchang Shi (Renmin University of China), DavidWooten (Microsoft) and Scott Rotondo (Sun Microsystems). The ?rst speaker provided a paper, which is included in these proceedings. Special thanks are due to these speakers. The contributed talks were arranged with two main tracks, one devoted to academic aspects of trusted computing systems (addressed by these proceings), and the other devoted to industrial aspects. The contributed papers were selected out of 42 submissions from 13 countries. The refereeing process was rigorous, involving at least three (and mostly more) independent reports being prepared for each submission. We are very grateful to our hard-working and distinguished Program Committee for doing such an excellent job in a timely fashion.

Trust 2009 conference, held in Oxford, UK in April 2009. Trust
2009 was the second international conference devoted to the

technical and socio-economic aspects of trusted computing. The conference had two main strands, one devoted to technical aspects of trusted computing (addressed by these proceedings), and the other devoted to socio-economic aspects. Trust 2009 built on the successful Trust 2008 conference, held in Villach, Austria in March 2008. The proceedings of Trust 2008, containing 14 papers, were published in volume 4968 of the Lecture Notes in Computer Science series.

ThetechnicalstrandofTrust2009contained15originalpapersonthedesig n and application of trusted computing. For these proceedings the papers have been divided into four main categories, namely: – Implementation of trusted computing – Attestation – PKI for trusted computing – Applications of trusted computing The 15 papers included here were selected from a total of 33 submissions. The refereeing process was rigorous, involving at least three (and mostly more) independent reports being prepared for each submission. We are very grateful to our hard-working and distinguished Program Committee for doing such an excellent job in a timely fashion. We believe that the result is a high-quality set of papers, some of which have been signi?cantly improved as a result of the refereeing process. We would also like to thank all the

authors who submitted their papers to the technical strand of the Trust 2009 conference, all external referees, and all the attendees of the conference.

Trusted Computing and Information Security Ming Xu, Zheng Qin.Fei Yan, Shaojing Fu, 2017-11-22 This book constitutes the refereed proceedings of the 11th Chinese Conference on Trusted Computing and Information Security, CTCIS 2017, held in Changsha, China, in September 2017. The 28 revised full papers presented were carefully reviewed and selected from 96 submissions. The papers focus on topics such as theory of trusted computing, trustworthy software; infrastructure of trusted computing, application and evaluation of trusted computing; network security and communication security; theory and technology of cryptographic techniques; information content security; system security for mobile network and IoT systems, industrial control and embedded systems; security for Cloud computing, virtualization systems and big data.

Autonomic and Trusted Computing Bing Xie, Juergen
Branke, Masoud Sadjadi, Daqing Zhang, Xingshe Zhou, 2010-10-08
Computing systems including hardware, software, communication, and networks are becoming increasingly large and heterogeneous.

In short, they have become - creasingly complex. Such complexity is getting even more critical with the ubiquitous permeation of embedded devices and other pervasive systems. To cope with the growing and ubiquitous complexity, autonomic computing (AC) focuses on self-manageable computing and communication systems that exhibit self-awareness, self-configuration, selfoptimization, self-healing, self-protection and other self-* properties to the maximum extent possible without human intervention or guidance. Organic computing (OC) additionally addresses adaptability, robustness, and c- trolled emergence as well as nature-inspired concepts for self-organization. Any autonomic or organic system must be trustworthy to avoid the risk of losing control and retain confidence that the system will not fail. Trust and/or distrust relationships in the Internet and in pervasive infrastructures are key factors to enable dynamic interaction and cooperation of various users, systems, and services. Trusted/ trustworthy computing (TC) aims at making computing and communication systems -- as well as services -- available, predictable, traceable, controllable, asse- able, sustainable, dependable, persistent, security/privacy protectable, etc. A series of grand challenges exists to achieve practical autonomic or organic

s- tems with truly trustworthy services. Started in 2005, ATC conferences have been held at Nagasaki (Japan), Vienna (Austria), Three Gorges (China), Hong Kong (China), Oslo (Norway) and Brisbane (Australia). The 2010 proceedings contain the papers presented at the 7th International Conference on Autonomic and Trusted Computing (ATC 2010), held in Xi'an, China, October 26–29, 2010.

Trusted Computing Dengguo Feng,2017-12-18 The book summarizes key concepts and theories in trusted computing, e.g., TPM, TCM, mobile modules, chain of trust, trusted software stack etc, and discusses the configuration of trusted platforms and network connections. It also emphasizes the application of such technologies in practice, extending readers from computer science and information science researchers to industrial engineers.

Trusted Computing for Embedded Systems Bernard

Candaele, Dimitrios Soudris, Iraklis Anagnostopoulos, 2014-12-11

This book describes the state-of-the-art in trusted computing for embedded systems. It shows how a variety of security and trusted computing problems are addressed currently and what solutions are expected to emerge in the coming years. The discussion focuses on attacks aimed at hardware and software for embedded.

systems, and the authors describe specific solutions to create security features. Case studies are used to present new techniques designed as industrial security solutions. Coverage includes development of tamper resistant hardware and firmware mechanisms for lightweight embedded devices, as well as those serving as security anchors for embedded platforms required by applications such as smart power grids, smart networked and home appliances, environmental and infrastructure sensor networks, etc. · Enables readers to address a variety of security threats to embedded hardware and software; Describes design of secure wireless sensor networks, to address secure authentication of trusted portable devices for embedded systems; · Presents secure solutions for the design of smart-grid applications and their deployment in large-scale networked and systems.

International Conference on Autonomic and Trusted Computing,

ATC 2009, held in Brisbane, Australia, in July 2009, co-located with

UIC 2009, the 6th International Conference on Ubiquitous

Intelligence and Computing. The 17 revised full papers presented

together with one invited paper and one keynote talk were carefully reviewed and selected from 52 submissions. The regular papers are organized in topical sections on organic and autonomic computing, trusted computing, wireless sensor networks, and trust.

Autonomic and Trusted Computing Laurence T. Yang, Hai Jin, Theo Ungerer, 2006-08-25 This book constitutes the refereed proceedings of the Third International Conference on Autonomic and Trusted Computing, ATC 2006, held in Wuhan, China in September 2006. The 57 revised full papers presented together with two keynotes were carefully reviewed and selected from 208 submissions. The papers are organized in topical sections.

Trusted Computing Platforms Sean W. Smith,2013-12-11 How can one trust computation taking place at a remote site, particularly if a party at that site might have motivation to subvert this trust? In recent years, industrial efforts have advanced the notion of a trusted computing platform as a building block. Through a conspiracy of hardware and software magic, these platforms attempt to solve this remote trust problem, to preserve various critical properties against various types of adversaries. However, these current efforts are just points on a larger continuum, which ranges from earlier work on secure coprocessor design and

applications, through TCPA/TCG, to recent academic developments. Without wading through stacks of theses and research literature, the general computer science reader cannot see this big picture. Trusted Computing Platforms: Design and Applications fills this gap. Starting with early prototypes and proposed applications, this book surveys the longer history of amplifying small amounts of hardware security into broader system security--and reports real case study experience with security architecture and applications on multiple types of platforms. The author examines the theory, design, implementation of the IBM 4758 secure coprocessor platform and discusses real case study applications that exploit the unique capabilities of this platform. The author discusses how these foundations grow into newer industrial designs, and discusses alternate architectures and case studies of applications that this newer hardware can enable. The author closes with an examination of more recent cutting-edge experimental work in this area. Trusted Computing Platforms: Design and Applications is written for security architects, application designers, and the general computer scientist interested in the evolution and uses of this emerging technology

Trusted Computing - Challenges and Applications Peter

Lipp,Ahmad-Reza Sadeghi,2008-08-04 This book constitutes the thoroughly refereed post-conference proceedings of the First International Conference on Trusted Computing and Trust in Information Technologies, TRUST 2008, held in Villach, Austria, in March 2008. The 13 revised full papers presented together with 1 invited lecture were carefully reviewed and selected from 43 submissions. The papers cover the core issues of trust in IT systems and present recent leading edge developments in the field of trusted infrastructure and computing to foster the international knowledge exchange necessary to catch up with the latest trends in science and technology developments.

Trusted Cellular IoT Devices Kersten Heins,2023-01-01 This book focuses on the impact of secure frontend devices for the Internet of Things (IoT). It explains how to identify vulnerabilities of IoT applications and how to protect them against misuse and attacks. Provided insights will help readers to design a reliable and trustworthy IoT ecosystem ensuring a high level of user confidence and a fruitful deployment. As a starting point, the book provides guidance how to identify risks and potential threats. Then, it explains which countermeasures are available and introduces all major ingredients for an efficient implementation of IoT security

measures, e.g. a bullet-proof protection of user privacy and device identities. The author outlines an efficient design approach that combines classical embedded computing with smartcard technology and wireless cellular networking like LTE-M or NB-IoT. The target audience includes industrial professionals and students focusing on low cost design and a fast time-to-market. The book is ideal for engineering-minded IoT project owners to safeguard their business goals.

The Trusted Advisor David H. Maister, Robert Galford, Charles Green, 2012-12-11 Beside talent and a sterling portfolio, what can world-class consultants like Deloitte & Touche, Societe General and Towers Perrin boast has helped them achieve success in our entrepreneurial economy? They all have the inside track on the indispensable Trusted Advisor model for client relationships, created by renowned experts Charles Green and Robert Galford. Now Green and Galford have teamed up with the acclaimed David Maister in order to help their latest high-profile, fast-forward client: you. In this straightforward guide, Maister, Green and Galford show readers that the key to professional success goes well beyond technical mastery or expertise. Today, it's all about the vital ability to earn the client's trust and thereby win the ability to influence

them. In these high risk times, trust is more valuable than gold. With this critical, highly detailed and accessible resource, readers will learn the five crucial steps for developing, managing and improving client confidence. For both emerging and established entrepreneurs and consultants, THE TRUSTED ADVISOR is the first truly indispensable business book of the decade.

Trusted Systems Chris J. Mitchell, Allan Tomlinson, 2012-12-15

This book constitutes the refereed proceedings of the International Conference on Trusted Systems, INTRUST 2012, held in London, UK, in December 2012. The 6 revised full papers presented together with 3 short invited papers and a short paper which formed the basis for a panel session were carefully reviewed and selected from 19 submissions. The papers are organized in topical section on automated analysis, security and trust, mobile trust, security of distributed systems, evaluation and analysis, and embedded security.

Trusted Systems Roderick Bloem, Peter Lipp, 2013-11-25 This book constitutes the thoroughly refereed conference proceedings of the 5th International Conference on Trusted Systems, INTRUST 2013, held in Graz, Austria, in December 2013. The revised full papers focus on the theory, technologies and applications of

trusted systems. They cover all aspects of trusted computing systems, including trusted modules, platforms, networks, services and applications, from their fundamental features and functionalities to design principles, architecture and implementation technologies.

The Trusted Advisor: 20th Anniversary Edition Charles H. Green, Robert M. Galford, David H. Maister, 2001-10-09 Bestselling author David Maister teams up with Charles H. Green and Robert M. Galford to bring us the essential tool for all consultants, negotiators, and advisors. In today's fast-paced networked economy, professionals must work harder than ever to maintain and improve their business skills and knowledge. But technical mastery of one's discipline is not enough, assert world-renowned professional advisors David H. Maister, Charles H. Green, and Robert M. Galford. The key to professional success, they argue, is the ability to earn the trust and confidence of clients. To demonstrate the paramount importance of trust, the authors use anecdotes, experiences, and examples -- successes and mistakes, their own and others' -- to great effect. The result is an immensely readable book that will be welcomed by the inexperienced advisor and the most seasoned expert alike.
