Logic in High Definition Alessandro Giordani,Jacek Malinowski,2020-11-19 This volume clusters together issues centered upon the variety of types of intensional semantics. Consisting of 10 contributions, the volume is based on papers presented at the Trends in Logic 2019 conference. The various chapters introduce readers to the topic, or apply new types of logical semantics to elucidate subtleties of logical systems and natural language semantics. The book introduces hyperintentional systems that aim at solving some open philosophical problems. Specifically, the first three studies focus on relating semantics, while the following ones discuss fundamental issues related to hyper-intensional semantics or develop hyper-intensional frameworks to address issues in modal, epistemic, deontic and action logic. Authors in this volume present original results on logical systems but also extend beyond this by offering philosophical considerations on the topic as well. This volume will appeal to students and researchers in the field of logic.

Semantic Modeling and Interoperability in Product and Process Engineering Yongsheng Ma,2013-06-06 In the past decade, feature-based design and manufacturing has gained some momentum in various engineering domains to represent and reuse semantic patterns with effective applicability. However, the actual scope of feature application is still very limited. Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field aiming at the enhancement of sustainable knowledge representation, implementation and reuse in an open and yet practically manageable scale. This semantic modeling technology supports uniform, multi-facet and multi-level collaborative system engineering with heterogeneous computer-aided tools, such as CAD/CAM, CAE, and ERP. This presented unified feature model can be applied to product and process representation, development, implementation and management. Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real-world scenarios. By expanding on well-known feature-based design and manufacturing approach, Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers, practitioners and students from both academia and engineering field.

The Graceful Guru Karen Pechilis,2004 A distinctive aspect of Hindu devotion is the veneration of a human guru, who is not only an exemplar and a teacher but is also understood to be an embodiment of the divine. Historically, the role of guru in the public domain has been exclusive to men. The new visibility of female gurus inIndia and the U.S. today, and indeed across the globe, has inspired this first-ever scholarly study of the origins, variety, and worldwide popularity of Hindu female gurus. In the Introduction, Karen Pechilis examines the historical emergence of Hindu female gurus with reference to the Hindu philosophy of the self, women spiritual exemplars as wives and saints, Tantric worship of the Goddess, and the internationalization of gurus in the U.S. in the twentieth century. Nine essays profile specific female gurus, presenting biographies of these remarkable women while highlightingoverarching issues and themes concerning women's status as religious leaders; these themes are nuanced in the afterword to the volume. The essays explore how Hindu female gurus embody grace in both senses--as a feminine ideal and an attribute of the divine--and argue that their status as leaders isgrounded in their negotiation of these two types of grace. This book provides biographical profiles of the following female gurus plus sensitive scholarly analysis of their spiritual paths: Ammachi, Anandamayi Ma, Gauri Ma, Gurumayi, Jayashri Ma, Karunamayi Ma, Ma Jaya Sati Bhagavati, Mother Meera,Shree Maa and Sita Devi.

Logic Synthesis and Verification Soha Hassoun,Tsutomu Sasao,2012-12-06 Research and development of logic synthesis and verification have matured considerably over the past two decades. Many commercial products are available, and they have been critical in harnessing advances in fabrication technology to produce today's plethora of electronic components. While this maturity is assuring, the advances in fabrication continue to seemingly present unwieldy challenges. Logic Synthesis and Verification provides a state-of-the-art view of logic synthesis and verification. It consists of fifteen chapters, each focusing on a distinct aspect. Each chapter presents key developments, outlines future challenges, and lists essential references. Two unique features of this book are technical strength and comprehensiveness. The book chapters are written by twenty-eight recognized leaders in the field and reviewed by equally qualified experts. The topics collectively span the field. Logic Synthesis and Verification fills a current gap in the existing CAD literature. Each chapter contains essential information to study a topic at a great depth, and to understand further developments in the field. The book is intended for seniors, graduate students, researchers, and developers of related Computer-Aided Design (CAD) tools. From the foreword: The commercial success of logic synthesis and verification is due in large part to the ideas of many of the authors of this book. Their innovative work contributed to design automation tools that permanently changed the course of electronic design. by Aart J. de Geus, Chairman and CEO, Synopsys, Inc.

Supervisory Control and Scheduling of Resource Allocation Systems Bo Huang,MengChu Zhou,2020-06-29 Presents strategies with reachability graph analysis for optimizing resource allocation systems Supervisory Control and Scheduling of Resource Allocation Systems offers an important guide to Petri net (PN) models and methods for supervisory control and system scheduling of resource allocation systems (RASs). Resource allocation systems are common in automated manufacturing systems, project management systems, cloud data centers, and software

engineering systems. The authors—two experts on the topic—present a definition, techniques, models, and state-of-the-art applications of supervisory control and scheduling problems. The book introduces the basic concepts and research background on resource allocation systems and Petri nets. The authors then focus on the deadlock-free supervisor synthesis for RASs using Petri nets. The book also investigates the heuristic scheduling of RASs based on timed Petri nets. Conclusions and open problems are provided in the last section of the book. This important book: Includes multiple methods for supervisory control and scheduling with reachability graphs, and provides illustrative examples Reveals how to accelerate the supervisory controller design and system scheduling of RASs based on PN reachability graphs, with optimal or near-optimal results Highlights both solution quality and computational speed in RAS deadlock handling and system scheduling Written for researchers, engineers, scientists, and professionals in system planning and control, engineering, operation, and management, Supervisory Control and Scheduling of Resource Allocation Systems provides an essential guide to the supervisory control and scheduling of resource allocation systems (RASs) using Petri net reachability graphs, which allow for multiple resource acquisitions and flexible routings.

An English-Hausa Dictionary Roxana Ma Newman, 1990 Hausa students and Hausaphiles now have an English-Hausa dictionary that is readily available, attractively produced and quite attractively priced, and more comprehensive than any English-based dictionary for an African language...A magnificent accomplishment that promises to serve a wide variety of purposes. It establishes both precedent and an excellent model that one hopes will be followed for other less commonly taught languages. -William R. Leben, *Modern Language Journal* This is a modern comprehensive dictionary designed specifically for English-speaking users who wish to acquire communicative fluency in Hausa, West Africa's most important and most widely spoken language. The dictionary contains a broad selection of words that the average person is likely to need in speaking and writing Hausa for everyday use. Included are common technical terms drawn from a range of fields, as well as generally accepted borrowings from English and French. The entries are divided into meaning groups and grammatical categories, marked clearly by semantic and usage indicators to help the user distinguish between the various meanings. Numerous phrases, sentences, and common idiomatic expressions illustrate conversational usage and provide culturally informative contexts. The easy to read typography marks lexical and grammatical distinctions of tone and vowel length for every Hausa word in the dictionary. The introduction provides concise information on various points of Hausa grammar. Useful appendixes include pronoun paradigms, pronunciation guides to Hausa place names and personal names, an index of Nigerian and international organizations, and a description of the currencies of Nigeria and Niger. An English-Hausa Dictionary will be an invaluable guide for students, research scholars, translators, and people with educational business, or governmental ties in West Africa who are interested in learning the language and culture of one of that area's most dynamic societies. It will be equally useful to non-Hausa speaking Africans who want to learn Hausa. In general, the innovative design features of this book will set a new standard for pedagogically oriented reference works of African languages. A valuable resource for scholars and students of linguistic and African languages and literature...It is highly recommended for use in academic and research libraries. Newman and her editorial staff deserve to be congratulated. -Felix Eme Unaeze, *American Reference Books Annual*

Deep Learning Ian Goodfellow, Yoshua Bengio, Aaron Courville, 2016-11-10 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." -Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. Port-Site and Wound Recurrences in Cancer Surgery M.A. Reymond, H.J. Bonjer, F. Köckerling, 2012-12-06 During the past 9 years, reports of 'port-site' deposits following laparoscopic surgery for malignancy, especially laparoscopic resection of colonic cancer, have cast a shadow on the wisdom of the laparoscopic approach in the surgical management in patients with cancer. Those reports of port-site deposits, some 90 cases reported in the literature up to 1999, have opened a 'can of worms' and highlighted the scarcity of our knowledge on cancer cell migration from solid tumors and the factors that underlie their successful implantation in surgical wounds both in the presence and absence of a positive pressure pneumoperitoneum. The jury is out even in relation to the effect of the healing surgical access wound - do the biochemical and cellular repair processes and the associated growth factors enhance or prevent implantation of exfoliated viable tumor cells? Whatever the answer to this question, it is clear that tumor cells do implant in healing surgical wounds and the key question is whether this is facilitated by laparoscopic surgery with CO pneumoperitoneum compared to the traditional 2 surgical exposure. It is known that tumors shed malignant cells into the blood stream, the peritoneal cavity and in the case of hollow organs, intraluminally. Equally there is good evidence that surgical and instrumental manipulation of tumors induce exfoliation of viable tumor cells.
