Dynamics of an Authoritarian System Mária Csanádi, Márton Gerő, Miklós Hajdu, Imre

Kovách, István János Tóth, Mihály Laki, 2022-07-12 This conceptually synthetic and empirically rich book demonstrates the vulnerability of democratic settings to authoritarianism and populism. Six scholars from various professional fields explore here the metamorphosis of a political party into a centralized authoritarian system. Viktor Orbán and his Fidesz party needed less than ten years to accomplish this transformation in Hungary. In 2010, after winning a majority that could make changes in the constitution – two-thirds of the parliamentary seats, they evolved and stabilized the system, which produced again the two-thirds majority in 2014 and 2018. The authors reveal how a democratic setting can be used as a device for political capture. They show how a political entity managed to penetrate almost all sub-fields of the economy to arrive at institutionalized corruption, and how the centralized power structure reproduces itself. With the help of a powerful empirical apparatus—among others analyses of more than 220,000 public tenders, redistributions of state subsidies, and the

interconnectedness of those privileged with the political elite – the authors detail the functioning of a crony system and the network aspects of political connections in the rapid enrichment of politically-linked businesses. Their studies demonstrate the role of political capture in this redistribution and how this capture leads to a new social stratification.

Puskas on Puskas Ferenc Puskás, 1997 Ferenc Puskas is one of the greatest soccer footballers of modern times, ranking alongside Pele, Di Stefano, Maradona and Cruyff in the game's Hall of Fame. With 83 goals in 84 matches for Hungary, he is still the most prolific international goalscorer of all time. In extensive recorded interviews, Puskas tells football historian Rogan Taylor the intimate story of his extraordinary double career (captain of the Hungarian team - unbeaten for four years... and after fleeing Hungary in the 1956 Uprising, a decade of glory after 30 years of age, with Real Madrid, Spain). This book provides a living history of the world's most popular sport providing an invaluable, personal record of the life of one of its most gifted and influential players.

Formations of Masculinity in Post-Communist Hungarian Cinema György Kalmár, 2017-09-18 This

book investigates the formations of masculinity in Hungarian cinema after the fall of communism and explores some of the cultural phenomena of the years following the 1989 regime change. The films explored offer a unique perspective encompassing two entirely different worlds: state socialism and neoliberal capitalism. The films suggest that Eastern Europe is somehow different than its western counterpart and that its subjects are marked by what they went through before and after 1989. These films are all remembering, interpreting, picturing, marketing and trying to come to terms with this difference—with the memory and effects of state-socialism. In looking closely at the films' male figures, one may not only get a glimpse of the dramatic changes Eastern European societies went through after the fall of communism but also see the brave new world of global neoliberal capitalism through the eyes of the Eastern European newcomers.

Metaphor and National Identity Orsolya Putz, 2019-12-15 Due to the Treaty of Trianon – which was signed at the end of World War 1 in 1920 – Hungary lost two thirds of its former territory, as well as the inhabitants of these areas. The book aims to reveal why the treaty still plays a role in

Hungarian national identity construction, by studying the alternative conceptualization of the treaty and its consequences. The cognitive linguistic research explores Hungarian politicians' conceptual system about Trianon, with special interest on conceptual metaphors. It also analyzes the factors that may motivate the emergence of the conceptual system, as well as its synchronic diversity and diachronic changes. The monograph provides a niche insight into the conceptual basis of how contemporary citizens of Hungary interpret the treaty of Trianon and its consequences. The book will be of interest to cognitive and cultural linguists, cultural anthropologists, or any professionals working on national identity construction.

Therapist's Guide to Positive Psychological Interventions Jeana L. Magyar-Moe, 2009-07-30

Positive psychology - essentially the scientific study of the strengths that enable individuals and communities to thrive - is a relatively new discipline that has experienced substantial growth in the last 5-10 years. Research suggests that the principles and theories from this area of study are highly relevant to the practice of counseling and psychotherapy, and positive psychology presents clinicians

and patients with a much needed balance to the more traditional focus on pathology and the disease model of mental health. This book provides a comprehensive introduction to the best-researched positive psychological interventions. It emphasizes clinical application, providing a detailed view of how the research can be applied to patients. Covering the broaden-and-build theory, strengths-based therapy, mentoring modalities and more, the volume will provide numerous assessment tools, exercises and worksheets for use throughout the counseling and psychotherapy process. - Summarizes the applications of research from positive psychology to the practice of counseling and psychotherapy - Provides clinician a variety of assessments, worksheets, handouts, and take home and in-session exercises to utilize in the process of conducting therapy from a positive psychological perspective - Provides general treatment planning guidelines for the appropriate use of such assessments, worksheets, handouts, and exercises - Bibliography of positive psychology references to compliment the information provided in this book

The TBE Book ,2020-05-01 While the number of vector-borne diseases and their incidence in Europe is much less than in tropical and/or developing countries, there are nevertheless a substantial number of such infections in Europe. The most important one is the zoonotic arbovirus infection Tick-Borne Encephalitis (TBE), a virus transmitted to humans by ticks or by consumption of unpasteurized dairy products from infected cows, goats, or sheep. TBE is endemic in the non-tropical Eurasian forest belt with most cases occurring in Russia and in central and eastern parts of Europe. In endemic areas, TBE is one of the most important causes of viral meningitis/encephalitis and a major public health concern. Moreover, TBE is becoming more and more frequent in Europe due to the appearance of new endemic areas and increasing awareness. However, it might be difficult to diagnose TBE, because clinical manifestations tend to be relatively nonspecific. Although a standardized case definition across the European Union has existed now for a few years, national implementation of TBE

programs, including regular screening and diagnosis, are done in only very few countries. Therefore, wide differences in the intensity and quality of national surveillance of TBE cases still exist, and the true burden of disease and the areas with circulation of the TBE viral subtypes in Europe and Asia are not fully known. Moreover, although safe and effective vaccines are available, vaccination uptake in most endemic countries is too low to reduce the TBE burden significantly. The authors of ‘The TBE Book’ therefore have tried to compile in this “working book” the most recent and relevant aspects of TBE.

Mouse Models of Human Cancer Eric C. Holland,2004-08-27 Mice have become the species of choice for modeling the complex interactions between tumor cells and the host environment. Mouse genetics are easily manipulated, and a growing array of technology exists for this purpose. Mouse models allow investigators to better understand causal relationships between specific genetic alterations and tumors, utilize new imaging techniques, and test novel therapies. Recent developments along these lines show great promise for the development of new anti-cancer treatments. Mouse Models of Human Cancer provides researchers and students with a complete resource on the subject, systematically presenting the principles, methodologies, applications, and challenges associated with

this exciting field. Offering a survey of the latest research and a description of future areas of interest, this text: Presents real experimental data Describes organ site-specific mouse models Clearly identifies suitable models for further drug testing Critically analyzes current methodologies and their limitations Features numerous recognizable expert contributors Lists key Web sites, reagents, and companies From mouse handling and genetic engineering to preclinical trials, *Mouse Models of Human Cancer* is a comprehensive guide to using these models and relating them to human disease. Its uniform presentation describes organ-specific models in clinical, imaging, and molecular terms, and lays out the relevant genetics, experimental approaches, histological comparisons with human disease, and conclusions. Combining stellar chapter authors, rich illustrations, and clear, up-to-date coverage, *Mouse Models of Human Cancer* is an invaluable resource for advanced students and cutting-edge researchers.

Mothers in the Jewish Cultural Imagination Marjorie Lehman,Jane L. Kanarek,Simon J.

Bronner,2017-08-01 Most Jews will feel intimately familiar with and attached to the figure of the ‘Jewish mother’, yet few have questioned representations of mothers and motherhood in Jewish culture. This volume aims to fill this gap by bringing to the fore the vast network of symbols and images which Jews have associated with mothers from the Bible to the modern period. It demonstrates the complex ways in which the Jewish mother has been used to construct and frame Jewish religion and culture.
