The Mailchimp User Guide for Beginners Bryan

Bent, 2021-10-08 Successful email marketing starts with your subscriber list. Open rates, click through rates, and most importantly - results - are all directly impacted by who is receiving and taking action on your emails. Since Mailchimp's monthly rates are based on your total subscriber count, you'll want to make sure that your list is clean, compliant, and doesn't include any duplicates. Proper list creation and importing is the most important step for any Mailchimp user. Before you can start designing, coding and sending HTML email, you need to know how it works and what tools you'll need. Here's some background information that every email designer and marketer should know. The most important thing to know about HTML email is that you can't just attach an HTML file and a bunch of images to a message and click —send. Most of the time, your recipients' email applications will break all the paths to your image files by moving your images into temporary folders on your hard drive. And you can't just paste all your code into your email application, either. Most email apps send messages in plain-text format by default, so the HTML won't render. Your recipients would just see all that raw source code, instead of the pretty email that's supposed to show up. Ready to explore new feature and know your software better? Read This book to know more.

And yet--perhaps because the ubiquity of email has obscured its study--this is the first scholarly book devoted to email as a key historical, social, and commercial site of digital communication in our everyday lives. In *Email and the Everyday*, Esther Milne examines how email is experienced, understood, and materially structured as a practice spanning the domestic and institutional spaces of daily life.
