Solomon Northup

Twelve Years a Slave Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Aesthetics of Sustainable Architecture Nezar AlSayyad, 2011 This book deals with the aesthetic potentials of sustainable architecture and its practice. In contrast to the mechanistic model, the book attempts to open a new area of scholarship and debate on sustainability in the design and production of architecture.

It traces and underscores how the consideration of environment and sustainability is directly connected to aesthetic propositions in architecture.

The Remote Sensing of Tropospheric Composition from Space John P. Burrows, Ulrich Platt, Peter Borrell, 2011-01-15 The impact of anthropogenic activities on our atmospheric environment is of growing public concern and satellite-based techniques now provide an essential component of observational strategies on regional and global scales. The purpose of this book is to summarise the state of the art in the field in general, while describing both key techniques and findings in particular. It opens with an historical perspective of the field together with the basic principles of remote sensing from space. Three chapters follow on the techniques and on the solutions to the problems associated with the various spectral regions in which observations are made. The particular challenges posed by aerosols and clouds are covered in the next two chapters. Of special importance is the accuracy and reliability of remote sensing data and these issues are covered in a chapter on validation. The final section of the book is concerned with the exploitation of data, with chapters on observational aspects, which includes both individual and synergistic studies, and on the comparison of global and regional observations with chemical transport and climate models and the added value that the interaction brings to both. The book concludes with scientific needs and likely future developments in the field, and the necessary actions to be taken if we are to have the global observation system that the Earth needs in its present, deteriorating state. The appendices provide a comprehensive list of satellite instruments, global representations of some ancillary data such as fire counts and light pollution, a list of abbreviations and acronyms, and a set of colourful timelines indicating the

satellite coverage of tropospheric composition in the foreseeable future. Altogether, this book will be a timely reference and overview for anyone working at the interface of environmental, atmospheric and space sciences.

Photobiology Lars Olof Björn, 2012-12-06 Photobiology - the science of light and life - begins with basic principles and the physics of light and continues with general photobiological research methods, such as generation of light, measurement of light, and action spectroscopy. In an interdisciplinary way, it then treats how organisms tune their pigments and structures to the wavelength components of light, and how light is registered by organisms. Then follow various examples of photobiological phenomena: the design of the compound eye in relation to the properties of light, phototoxicity, photobiology of the human skin and of vitamin D, photomorphogenesis, photoperiodism, the setting of the biological clock by light, and bioluminescence. A final chapter is devoted to teaching experiments and demonstrations in photobiology. This book encompasses topics from a diverse array of traditional disciplines: physics, biochemistry, medicine, zoology, botany, microbiology, etc., and makes different aspects of photobiology accessible to experts in all these areas as well as to the novice.

Energy Politics and Schumpeter Dynamics Helmar Krupp, 2013-03-09 Japan is a country lacking her own energy sources and other natural resource~. Still, over the 4 decades since the end of World War II, she has achieved considerable economic development, a fact which highlights the success of the policies implemented by the government and their acceptance by the well matured Japanese society. At present, the world is confronted with serious environmental problems, for example, the consumption of large

amounts of energy that leads to increases in atmospheric carbon dioxide levels and subsequent global warming. After the oil crisis in the 1970s, Japan strove to reduce energy consumption, and achieved significant improvements in production efficiency in industry and in the air conditioning of homes. Another example of her success is in the automobile industry, where Japanese automobiles enjoy a good reputation for fuel efficiency. Japan has shown that environmental protection and economic development can be accomplished simultaneously, although the problems have not been solved completely. There are many areas that require further study. In this book, Dr. Helmar Krupp describes how society is organized to form a system. Then, in a unique and interesting turn, he tries to analyze the industrial development using Schumpeter's theory. Subsequently, many leaders in the field of energy policy in Japan discuss the issues involved from a variety of viewpoints.
