Central Oregon Aviation Tor Hanson,2021 This book will take readers back in time to the pioneering days of Central Oregon, when birdmen and barnstormers crisscrossed the skies in their Wright Flyers, Curtiss Jennys, and Ford Trimotors. In the early days, the dusty high desert airfields were home to flimsy airplanes. As air travel evolved from utilizing seat-of-the-pants construction to becoming a new mode of mass transportation, the Central Oregon region developed along with the technology. Over the next century, a dedicated group of visionaries--aviators and city officials--built a thriving economy around Redmond Municipal Airport. Today, this transportation hub, also known as Roberts Field, sees an average of 1 million passengers each year. It is complemented by smaller general aviation airports that are home to private and corporate pilots, as well as a flourishing aviation industry.

Regulatory Reform and Competitiveness in Europe: Vertical issues Giampaolo Galli,Jacques Pelkmans,2000-01-01 The second of two volumes, this text discusses the vertical issues involved in regulatory reform. The contributors describe in detail the regulatory reforms which are needed or have been initiated in nine major industrial sectors, including automobiles, textiles and clothing, retail trade, chemicals, banking, road transport, telecoms, electricity and (scheduled) air transport. They argue that regulatory reform can, more often than not, help improve the competitiveness of companies while generating net growth effects for the European Union as a whole.

Air Quality in Airplane Cabins and Similar Enclosed Spaces Martin B. Hocking,Diana Hocking,2005-09-16 The issue of aircraft air quality is attracting considerable attention of late, as access to public air travel has expanded exponentially. Aircrew and passengers are increasingly concerned about operating and service decisions that could affect their health, comfort, and safety. The editor of this volume invited a wide range of experts to provide an in-depth treatment of virtually all aspects of aircraft cabin air quality. The topics are covered at a level comprehensible to all who fly as well as being of sufficient depth to be informative to decision makers concerned with purchase, design, operation, and servicing of passenger aircraft. Topics are grouped under: Control of Aircraft Cabin Air Quality; Possible Effects of Low Humidity, Decreased Outside Air Flows; and Effects of Some Aircraft Malfunctions on Cabin Air Quality. The volume concludes with Air Quality Systems for Related Enclosed Spaces, in which chapters cover air quality in buildings, ships, submarines, and spacecraft, which provide novel approaches potentially applicable to aircraft.
