*After the Map* William Rankin, 2016-07 Over the course of the twentieth century, there was a major shift in practices of mapping, as centuries-old methods of land surveying and print publication were incrementally displaced by electronic navigation systems. William Rankin argues that although this shift did not render traditional maps obsolete, it did revise the goals of the mapping sciences as a whole. Military cartographers and civilian agencies alike developed new techniques for tasks that exceeded the capabilities of paper, such as aiming long-range guns, navigating in featureless environments, regularizing air travel, or drilling for offshore oil. *After the Map* reveals the major conceptual ramifications of these and other changes and in doing so offers a new way of understanding the central political-geographic shift of the twentieth century. Seen first and foremost as affecting a transformation in the nature of territory, the change from paper mapping to electronic systems is not a story about technological improvement or the wizardry of precision; instead, it is about the kind of geographic knowledge and therefore governance that can exist in the first place.

**Cartographies of Travel and Navigation** James R. Akerman, 2010-11-15 Finding one's way with a map is a relatively recent phenomenon. In premodern times, maps were used, if at all, mainly for planning journeys in advance, not for guiding travelers on the road. With the exception of navigational sea charts, the use of maps by travelers only became common in the modern era; indeed, in the last two hundred years, maps have become the most ubiquitous and familiar genre of modern cartography. Examining the historical relationship between travelers, navigation, and maps, *Cartographies of Travel and Navigation* considers the cartographic response to the new modalities of modern travel brought about by technological and institutional developments in the twentieth century. Highlighting the ways in which the travelers, operators, and planners of modern transportation systems value maps as both navigation tools and as representatives of a radical new mobility, this collection brings the cartography of travel—by road, sea, rail, and air—to the forefront, placing maps at the center of the history of travel and movement. Richly and colorfully illustrated, *Cartographies of Travel and Navigation* ably fills the void in historical literature on transportation mapping.
