  <u>51 Tools for Transforming Your Training</u> Kimberley Hare,Larry Reynolds,2017-03-02 Brain-Friendly Learning is not about techniques and gimmicks. It is far more than just putting on baroque music, or playing fun games. It's a movement rather than just a method; a movement to recover the real joy of learning that combines both sizzle and substance to every part of your training. This resource provides a blueprint for a new generation of accelerated learning methods. At its heart are five key principles: ¢ Keep it real ¢ Facilitate the flow ¢ Honour uniqueness ¢ Make it rich and multi-sensory ¢ State is everything (well almost). There is a clear explanation of the theory behind Brain-Friendly Learning from the inside out; the concepts and learning models you need to underpin your approach, along with a journey through the most complex structure in the universe - your amazing brain. You'll also discover a concise guide to brain-friendly training design along with tools that you can pick and adapt to help you create new training events or make-over existing ones. This resource is packed with activities for the trainer or facilitator. Some are designed to help you understand a particular concept in more detail; others are designed to apply the concept to learning events which you are facilitating. You will have attended or facilitated (some) training sessions that engaged you, motivated you and left

you with new insights and new techniques that you were just burning to try. At the time, you may not have been able to define what it was about these events that made them so special. This resource helps you to understand exactly what the mystery ingredient is and shows you how to use the whole encyclopedia of techniques that turn training into Brain-Friendly Learning.

Web 2.0 Tools in Concept Teaching Zeynep Tatlı,Ali Şükrü Özbay,2021-11-30 Currently, students are interested in more than one thing at the same time, preferring to use visuals and infographics, rather than writing, in the learning process. In addition, these students use technology better in the education process, as in all aspects of daily life, as they meet technology at an earlier age than their teachers. Therefore, teachers should also update themselves according to these learner characteristics. In particular, "assessment" and "evaluation" are two of the topics that students may not enjoy to their fullest extent. This book serves to make the assessment process fun and interactive, as well as to inform teachers about the different applications they can do in this process. It invites teachers to introduce highly interactive applications and make their classes active in the learning process.

Knowledge Cartography Alexandra Okada,Simon J. Buckingham Shum,Tony Sherborne,2014-10-07 Focuses on the process by which manually crafting interactive, hypertextual maps clarifies one's own understanding, communicates it to others, and enables collective intelligence. The authors see

mapping software as visual tools for reading and writing in a networked age. In an information ocean, the challenge is to find meaningful patterns around which we can weave plausible narratives. Maps of concepts, discussions and arguments make the connections between ideas tangible - and critically, disputable. With 22 chapters from leading researchers and practitioners (5 of them new for this edition), the reader will find the current state-of-the-art in the field. Part 1 focuses on knowledge maps for learning and teaching in schools and universities, before Part 2 turns to knowledge maps for information analysis and knowledge management in professional communities, but with many cross-cutting themes: · reflective practitioners documenting the most effective ways to map · conceptual frameworks for evaluating representations · real world case studies showing added value for professionals · more experimental case studies from research and education · visual languages, many of which work on both paper and with software · knowledge cartography software, much of it freely available and open source · visit the companion website for extra resources: books.kmi.open.ac.uk/knowledge-cartography Knowledge Cartography will be of interest to learners, educators, and researchers in all disciplines, as well as policy analysts, scenario planners, knowledge managers and team facilitators. Practitioners will find new perspectives and tools to expand their repertoire, while researchers will find rich enough conceptual grounding for further scholarship.
