**Model Building in Economics** Lawrence A. Boland, 2014 Concern about the role and the limits of modeling has heightened after repeated questions were raised regarding the dependability and suitability of the models that were used in the run-up to the 2008 financial crash. In this book, Lawrence Boland provides an overview of the practices of and the problems faced by model builders to explain the nature of models, the modeling process, and the possibility for and nature of their testing. In a reflective manner, the author raises serious questions about the assumptions and judgments that model builders make in constructing models. In making his case, he examines the traditional microeconomics-macroeconomics separation with regard to how theoretical models are built and used and how they interact, paying particular attention to the use of equilibrium concepts in macroeconomic

models and game theory and to the challenges involved in building empirical models, testing models, and using models to test theoretical explanations. Lawrence Boland has been teaching at Simon Fraser University since 1966. He has also taught at the University of Wisconsin-Milwaukee and was a visiting professor in the department of economics at Boston University. At Capilano College and Vancouver Community College, he taught introductory sociology. He is a Fellow of the Royal Society of Canada. Dr. Boland has published six books on economic methodology, including *The Foundations of Economic Method: A Popperian Perspective* (2003); *The Principles of Economics: Some Lies My Teachers Told Me* (1992); and *The Methodology of Economic Model Building: Methodology after Samuelson* (1989) --

**Soccer Thinking for Management Success** Peter Loge, 2018-07-27 The modern world is networked and always working. Organizations no longer have the luxury of time. Expertise is no longer confined to a couple of smart guys in corner offices, reviewing information to which only they have access and issuing instructions through layers of middle-men to nine-to-fivers who carry out the dictates and feed paper back up the chain, awaiting the next set of instructions. Today's successful organization is decentralized and never stops moving. In fact, organizational success is a lot like soccer. Every player is both a specialist and generalist. Responsibility on the field is distributed, and everyone on the team works for everyone else. Communication

among players is constant. Soccer is 90 minutes of systems thinking in action. Soccer Thinking for Management Success is by a soccer fan and player who has spent a career building and running teams and organizations. He draws on insights from leaders, known and not-so-well-known who use soccer thinking to succeed. This is not just another book on how to be a great leader by a famous person. This is a management and leadership book by, and for, the rest of us.
