Curiosity Rod Pyle, 2014-07-15 The story of the people who designed, built, launched, landed, and are now operating the Mars rover Curiosity Award-winning science writer Rod Pyle provides a behind-the-scenes look into the recent space mission to Mars of Curiosity--the unmanned rover that is now providing researchers with unprecedented information about the red planet. Pyle follows the team of dedicated scientists whose job it is to explore new vistas on Mars. Readers will also join Curiosity, the most advanced machine ever sent to another planet, on its journey of discovery. Drawing on his contacts at NASA and the Jet Propulsion Laboratory, the author provides stunning insights into how this enthusiastic team of diverse individuals uses a revolutionary onboard laboratory of chemistry, geology, and physics instruments to unravel the profound secrets of the Red Planet. Readers will meet: Robert Manning, chief engineer for every rover mission since Pathfinder; John Grotzinger, the chief scientist of the entire mission; Vandl Tompkins, the software designer who keeps the rover on track; Bobak Ferdowsi, famed "Mohawk Guy" from Mission Control; Adam Steltzner, the Elvis-like Entry, Descent and Landing Lead; Al Chen, chief of flight dynamics and the voice of JPL during Curiosity's treacherous landing; and many others. And of course, Pyle describes the adventures of the Curiosity rover itself, from landing through the first samples, drilling, and discovering a habitable past on the planet, to reaching the ultimate target: Mount Sharp, in the center of Gale Crater. America is once again at the forefront of a new space age and Curiosity is just the beginning of many exciting new discoveries to come.

Missions to Mars Larry S. Crumpler, 2021-11-09 From a long-term planning lead for the Mars Exploration Rover Project comes this vivid insider account of some of NASA's most vital and exciting missions to the Red Planet, illustrated with full-color photographs—a wondrous chronicle of

unprecedented scientific discovery and the search for evidence of life on Mars. “There are probably just a few of moments in human history when a small group of humans stood on the margins of a vast new world, and it is no stretch of the romantic imagination that the arrival of two rovers on the surface of another planet was surely one of them.” Human exploration of Mars is the most ambitious and exciting scientific goal of the twenty-first century. Few people know as much about this fascinating planet as Dr. Larry Crumpler. As one of the long-term planning leads for the Mars Exploration Rover Project, he helped control the daily communications between NASA and the rovers roaming the planet to gather scientific data. Thanks to the Rover Project, we now know that the dry, red dust of the planet’s surface hides a wet, possibly living history, and that conditions were present for the evolution of complex, organic life. In this magnificent compendium, Dr. Crumpler recounts the history of the Red Planet, from the earliest days when ancient astronomers turned their eyes to the heavens to the breakthrough discoveries being unearthed by modern technology today, including some of the first images from the latest rover, Perseverance. Paired with stunning, full-color photographs taken by rovers and NASA satellites images, this magnificent “biography” of the red planet allows us to understand and experience it as never before. When the Spirit and Opportunity Rovers landed on Mars in January 2004, scientists expected them to function for 90 days. But those three months turned into fifteen years. With data gathered by the rovers, Dr. Crumpler and his fellow team members were able to reconstruct the planet’s stunning geological past, when it was once inundated with water, and perhaps could have supported microbial life. Dr Crumpler also reveals the joys and demands of life as a scientist taking part in these historic missions. Exploring fundamental questions about this remarkable planet that have intrigued us earthlings for years, *Missions to Mars* illuminates Mars’ significance in the solar system—and the human imagination.

Breakthroughs in Mars Exploration Karen Latchana Kenney, 2019-02-01 Will astronauts one day travel all the way to Mars? Get informed about Mars research and plans for Mars exploration, and discover key aspects of the science and technology involved in solving the mysteries of the red planet.

Sojourner Andrew Mishkin, 2003 Far out of reach of her human creators -- one hundred twenty-two million miles from home -- a sophisticated, thinking robot smaller than a microwave oven crept among the rocks of an alien landscape. Six-wheeled Sojourner was doing what had never been done before -- exploring the rough, red terrain of Mars. Soon, she would beam spectacular pictures of her one-of-a-kind travels back to Earth. And millions of people would be captivated. Book jacket.

Red Rover Roger Wiens, 2013-03-12 The principle investigator for the ChemCam instrument on the Curiosity rover and a scientist at Los Alamos National Laboratory, Wiens traces the ups and downs of the new era of robotic space exploration through his own experience working on some of the important projects over the past decade. His topics include from Minnesota to the moon, vindication, ticket to Mars, on the Rover, and seven minutes of terror. His account provides a framework for the images and data currently coming back from Curiosity.

Mission to Mars James E. Oberg, 2017-09-15 How feasible is a manned Mars flight? How soon will it be possible? How long will it take? What kind of spacecraft will make the journey? What kind of data will be collected? What are the advantages of a manned flight over an unmanned? *Mission to Mars* discusses these questions and more in this serious, documented treatment of the not-too-distant manned expedition to Mars. The shuttle has proved successful and an enthusiastic boost to American interest in space. But while many laypeople wonder "what's next," scientists are planning what they feel is the next logical step. Drawing on the vast amount of data sent back by Viking orbiters and

probes, and existing developments in propulsion and space technology, space experts all over have been speculating, analyzing, and exchanging ideas relative to the long-awaited mission to Mars. Other factors, critical to an intelligent discussion of such an undertaking are included here: spaceship design and assembly, propulsion systems, navigation principles, life support systems, selecting a landing site, scientific activities on Mars, cost factors, political and social issues.

NASA Mars Rover Perseverance Steven Marboy, 2020-07-29 Perseverance is the latest in a long line of Mars rovers to be named by school-age children, from Sojourner in 1997 to the Spirit and Opportunity rovers, which landed on Mars in 2004, to Curiosity, which has been exploring Mars since 2012.

Landing on Mars Margaret J. Goldstein, 2023-08-01 Conditions on Mars make landing there very challenging. Readers get a close-up look at these challenges, plus information on how scientists have successfully landed rovers on Mars and how they might land humans there someday.

Curiosity's Mission on Mars Ron Miller, 2014-05-01 Could life have previously flourished on Mars? Will humans be able to travel there one day? Can humans one day colonize the red planet? NASA scientists have been interested in answering questions like these for a long time. In November 2011, NASA sent the rover Curiosity to Earth's nearest planetary neighbor. By gathering information about Mars's climate and geology, the robot is helping scientists uncover the secrets of the planet and its past. Since its launch, Curiosity has made some amazing discoveries. Just seven weeks after landing, the rover found an ancient streambed where water once flowed for thousands of years. In addition,

from drilling into Martian rock, the rover detected the key chemicals necessary for life--sulfur, nitrogen, hydrogen, oxygen, phosphorus, and carbon. And Curiosity's measurement of radiation on Mars shows levels similar to that at the International Space Station. These discoveries suggest that some parts of Mars could have been habitable--and may be again in the future. Learn more about the red planet and see what else Curiosity has uncovered!

Mars Landing 2012 Marc Kaufman, 2012-07-17 National Geographic presents the science, the goals, and the anticipation of humankind's most ambitious planetary expedition ever: the Curiosity mission to Mars. On August 6, 2012 (EST), NASA's Curiosity spacecraft will complete its 255-day, 354-million-mile journey and plunge down into Gale Crater, its target on the martian surface, decelerating from 13,200 to 0 mph in 7 minutes. The whole world will be watching this, the most complicated and precise landing ever undertaken, and wondering: What's the inside story on this Curiosity mission, and what do NASA scientists hope Curiosity will find? In this e-short, written by Washington Post science correspondent Marc Kaufman and published just as the suspense builds, with Curiosity hurtling toward Mars, space science readers, techies, and informed news junkies will find answers to these and other fascinating questions about the red planet.

Seeing Like a Rover Janet Vertesi, 2015-04-22 In the years since the Mars Exploration Rover Spirit and Opportunity first began transmitting images from the surface of Mars, we have become familiar with the harsh, rocky, rusty-red Martian landscape. But those images are much less straightforward than they may seem to a layperson: each one is the result of a complicated set of decisions and processes involving the large team behind the Rovers. With *Seeing Like a Rover*, Janet Vertesi takes us behind the scenes to reveal the work that goes into creating our knowledge of Mars. Every photograph that the Rovers take, she shows, must be processed, manipulated, and

interpreted—and all that comes after team members negotiate with each other about what they should even be taking photographs of in the first place. Vertesi's account of the inspiringly successful Rover project reveals science in action, a world where digital processing uncovers scientific truths, where images are used to craft consensus, and where team members develop an uncanny intimacy with the sensory apparatus of a robot that is millions of miles away. Ultimately, Vertesi shows, every image taken by the Mars Rovers is not merely a picture of Mars—it's a portrait of the whole Rover team, as well.

Perseverance and the Mars 2020 Mission Manfred "Dutch" von Ehrenfried, 2022-01-18 This is the comprehensive story of NASA's pioneering Mars 2020 mission, which at this moment continues to break ground on the surface of the Red Planet. The book takes readers through every stage of the Mars mission, describing its major goals and objectives, the cutting-edge technology and instrumentation onboard the Perseverance rover and other spacecraft components, and the members of the scientific team who steered the mission along the way. Mars 2020 is the first to actually take samples of the Red Planet and prepare them for subsequent return to Earth. The chapters therefore delve into how and why Jezero Crater was selected as the optimal landing and sample collecting site to meet the mission objectives. Featuring dozens of high-resolution images of the mission, this book gives readers a deeper understanding of the technology underlying Mars 2020 and why its work is so important for planetary science and space exploration.

Exploring Planet Mars David Jefferis, Mat Irvine, 2007 Exploring Planet Mars looks at the scientific facts about Earth's nearest neighbor and delves into future exploration of the planet—possibly even colonization! Discoveries from the recent probes sent to the planet will be explored and whether they help confirm signs of life on Mars or not.

Mars Rover Curiosity Rob Manning (Engineer), William L. Simon, 2014 In *Mars Rover Curiosity: An Inside Account from Curiosity's Chief Engineer*, Rob Manning, the project's chief engineer, tells of bringing the groundbreaking spacecraft to life. Manning and his team at NASA's Jet Propulsion Laboratory, tasked with designing a lander many times larger and more complex than any before, faced technical setbacks, fights over inadequate resources, and the challenges of leading an army of brilliant, passionate, and often frustrated experts.

Mars Robert Godwin, 2004 In 1877 the famed Italian astronomer Giovanni Schiaparelli used his brand-new 8.6 inch telescope to study the planets. To his great surprise he suspected that he saw symmetry on Mars. In the years that followed one astronomer after another looked at the red planet and gradually a mythology was formed -- a mythology of alien intellect. By the 1890's the martial influence had spilled over into all walks of life and sparked philosophical debates and wondrous fictions. Scientists, fantasists and people of all creeds looked up and wondered -- is there life out there? Now, more than a century later, nations around the world are bombarding Mars with an unprecedented fleet of exploratory vehicles. Their journey taking less time than it took Amundsen and Shackleton to reach the poles of Earth, these small but hardy robotic emissaries are thrusting their way through the depths of interplanetary space to take up residence in the barren Martian deserts. Their goal is to answer one of the oldest questions in mankind's history. Is there life out there? In this sequel to the best-selling first volume, the reader is brought up to date with the most recent results from our nearest neighbour. Filled with a wealth of facts about the latest fleet of Martian explorers as well as a look at what may be coming next in mankind's most ambitious quest for knowledge. Includes DVD-V / DVD-ROM featuring: Exclusive interviews with Mars Rover Mission Scientist Steve Squyres, Senior Flight Engineer Rob Manning, Mission Manager Jim Eriksen, the complete Cornell

animation of the Rovers created by Maas Digital, a NASA animation of a proposed Manned Mars mission, the exciting mission control broadcast of the landing of Opportunity in Meridiani Planum and as an added extra special bonus, extremely rare video of Dr Wernher von Braun filmed in 1976 at the occasion of his last public speech about Mars exploration.

Mars Exploration Rovers Stephen John Kortenkamp, 2016-08-01 This book explores various perspectives surrounding the ongoing efforts to explore Mars and the men and women who work to better understand our solar system. Readers are immersed in the action as their choices guide the narrative.

Mars The Next Step Smith A E, 1989-01-01 The conquest of Earth's moon was merely a precursor to a more dramatic step forward, which will take men and women to an outpost that might eventually become a second home for the human race. *Mars: The Next Step* illustrates how the only feasible colonization of another planet in our solar system will be on Mars. The author addresses the various questions surrounding this theory with frank scientific caution that in no way obscures his vigorous enthusiasm and, above all, optimism for mankind's future in space. This vivid and entertaining book explores terraforming (planetary engineering), which could turn Mars into a more congenial environment for humans, both in terms of changing the harsh climate of the planet and the production of plants able to thrive there by means of genetic engineering. The book includes numerous diagrams of possible manned spacecraft, along with color pictures of Mars taken on previous unmanned missions.

Cars on Mars Alexandra Siy, 2011-07-01 Follow the course of NASA's Mars Exploration Rovers Mission. Learn how scientists determined that there was once water on Mars and how they resolved problems with the rovers in order to prolong the mission.
