Immunity to Malaria and Vaccine Strategies Kevin N. Couper, Julius C. Hafalla, Noah S. Butler, Ashraful Haque, 2019-10-10 Malaria, caused by infection with protozoan parasites belonging to the genus *Plasmodium*, is a highly prevalent and lethal infectious disease, responsible for 435,000 deaths in 2017. Optimism that malaria was gradually being controlled and eliminated has been tempered by recent evidence that malaria control measures are beginning to stall and that *Plasmodium* parasites are developing resistance to front-line anti-malarial drugs. An important milestone has been the recent development of a malaria vaccine (Mosquirix) for use in humans, the very first against a parasitic infection. Unfortunately, this vaccine has modest and short-lived efficacy, with vaccinated individuals possibly being at increased risk of severe malarial disease when protection wanes. Thus, to define new ways to combat malaria, there remains an urgent requirement to identify the immune mechanisms that promote resistance to malarial disease and to understand why these so often fail. The review and primary research articles in this Research Topic illustrate the breadth of research performed worldwide aimed to understand the biology of the *Plasmodium* parasite, the roles of the various cell types that act within the immune response against the parasite, and the parasitological and immunological basis of severe malarial disease. The articles in section 1 exemplify the different vaccination strategies being developed and tested by the research community in the fight against malaria. The articles in section 2 review important overarching aspects of malaria immunology and the use of models to study human malaria. The articles in section 3 describe the ways through which the *Plasmodium* parasite is initially recognised by the immune system during infection, how the parasite can directly impact this critical event to restrict anti-*Plasmodium* immunity, and resolve the roles of key innate cell populations, such as dendritic cells, in coordinating malarial immunity. The articles in sections 4-6 outline the roles T and B cell populations play during malaria, highlighting the activation, diversification and regulation of the crucial cell types during malaria, and discuss some of the reasons adaptive immunity to malaria is often considered so poor compared with other diseases. The articles in section 7 provide up to date information on the pathogenesis of cerebral malaria, bridging our understanding of the syndrome in humans with information learned from animal models. Overall, the articles in this research, many of which are published by leaders in the malaria field, emphasize the imagination and technical advances being employed by researchers against malaria. We acknowledge the initiation and support of this Research Topic by the International Union of Immunological Societies (IUIS). We hereby state publicly that the IUIS has had no editorial input in articles included in this Research Topic, thus ensuring that all aspects of this Research Topic are evaluated objectively, unbiased by any specific policy or opinion of the IUIS.

International Review of Cytology Kwang W. Jeon, 2007-07-16 International Review of Cytology presents current advances and comprehensive reviews in cell biology – both plant and animal. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research. Articles in this volume include Adhesion Molecules and Other Secreted Host-interaction Determinants in Apicomplexa: Insights from Comparative Genomics; Cell Responses to Biomimetic Protein Scaffold Used in Tissue Repair and Engineering; New Insights into Glycosphingolipid Function – Storage, Lipid Rafts and Translocators; Microscopic Morphology and the Origins of the Membrane Maturation Model of Golgi Apparatus Function; New Insights into the Macronuclear Development in Ciliates; Polarity Regulators and the Control of Epithelial Architecture, Cell Migration and Tumourigenesis.

Advances in Parasitology, 2016-03-22 First published in 1963, *Advances in Parasitology* contains comprehensive and up-to-date reviews on all areas of

interest in contemporary parasitology. The series includes medical studies of parasites of major influence, such as *Plasmodium falciparum* and trypanosomes. The series also contains reviews of more traditional areas, such as zoology, taxonomy, and life history, which help to shape current thinking and applications. The 2014 impact factor is 6.226. Informs and updates on all the latest developments in the field of parasitology Contains contributions from leading authorities and industry experts

Malarial Drug Delivery Systems Ranjita Shegokar, Yashwant Pathak, 2023-03-06 This book targets new advances in areas of treatment and drug delivery sciences for Malaria. This is the only published book which compiles the complete road map of malarial drug delivery systems along with an overview on the pathology, current state of malaria across the globe, new clinical trials, emerging drugs and evolving novel drug delivery platforms. A wide variety of novel micro-and nano-formulations using promising technologies are being explored to deliver the malarial drug via different administration routes. This book addresses the gap between new approaches and old treatment modalities and how the former is superior in pharmacological performance when tested in in-vitro and in-vivo. Audience from wide range group like from researchers to regulatory bodies can benefit from the compiled information to find out patient needs and addresses a much-needed update to the existing malaria drug delivery research.

Protein Phosphorylation in Parasites Christian Doerig, Gerald Spaeth, Martin Wiese, 2013-10-11 This is the first book to collect and summarize in one publication the efforts to use kinases or phosphatases for drug development against parasite infections. The editors and contributors comprise the Who is Who in the field, and they are comprehensive in covering every aspect of the topic, from basic research findings to translational approaches in drug development The result will be welcomed by everyone in academia and industry participating in the global effort to finally combat the major diseases caused by eukaryotic parasites. This is volume one of a two-volume treatise, the second being exclusively dedicated to efforts to combat malaria using the same approach.

Reflections on a Century of Malaria Biochemistry Irwin Sherman, 2011-08-29 Malaria is one of the most common infectious diseases and an enormous public health problem. Each year it causes disease in approximately 650 million people and kills between 1 and 3 million, most of them young children in Sub-Saharan Africa. This book provides an overview of the research that has been done in malaria biochemistry in the quest to find a cure. It discusses how our understanding has helped us to develop better diagnostics and novel chemotherapies. Researchers will find having all of this information in one volume, annotated with personal reflections from a leader in the field, invaluable given the big push being made on various fronts to use the latest drug discovery tools to attack malaria and other developing country diseases. * Reviews the past 100 years of malaria biochemistry research providing researchers with an overview of the investigations that have been undertaken in this field Benefit: Allows researchers to see what progress has been made so that they can use this knowledge when trying to develop the latest drug discovery tools to attack malaria * Chronicles both biochemical successes and failures Benefit: Allows researchers to see what has and hasn't work which they can then apply in their own research

The Book of Renee Renn Martin,2002-11-01 The Book of Renee is a jewel. Told in a simple, elegant voice, its stories run the gamut from bawdy to reverent, from the slap-stick comic to the severe. It is a memorial service interspersed with hymns-a remarkable group of sonnets once written as a wedding gift for a new bride And, it is one man's attempt to outlive the grief of loss. Everyone should have a book like this written for them-everyone should live their lives so as to deserve it. What Ravel's Pavanne for a Dead Princess is in music, what the Taj Mahal is in architecture, The Book of Renee is in literature.
