Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21 Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, *Short Message Service (SMS): The Creation of Personal Text Messaging*, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

Don't Throw the Book at Them Harry Box, 2014-09-09 Don't Throw the Book at Them addresses one of the most vital issues in contemporary missions. It is a manual for cross-cultural missionaries and national church leaders ministering in societies based on oral rather than written communication. Harry Box is a former missionary and researcher in Papua New Guinea and among the Aborigines of Central Australia. In this book, he explains the distinct characteristics of oral societies, how they differ from literacy-oriented societies, Jesus' ministry to oral communicators, and why effective presentation of the Christian message demands that Western Christians change their approach to orality. He goes beyond case studies and analysis, allowing the reader to develop a detailed plan for communication.

The Joy of Text Kristina Grish,2010-05-11 Finally, the software gods have rescued us from our stalled, confused love lives by giving us so many new ways to meet, connect, and share what we want, feel, and mean. Or have they? Dating has never been simple, but in an age of IMs, text messages, e-mails, and BlackBerry notes, it can be an absolute minefield. How can you accurately judge a guy's potential when all you have to go on is his punctuation? What's the best way to maintain your witty, sassy rapport once you've decided to leave the safety of techno-anonymity and take your relationship off-line? When do you remedy a techno-gaffe or know if it's too early to hit send? And how can you gauge his feelings without seeing his body language or even hearing his voice? Enough is enough. In *The Joy of Text*, real-life cyber-Cyrano Kristina Grish establishes hard and fast rules to help modern women navigate their love lives via technology; offers invaluable tips on how to analyze text, timing, and tone; and provides advice on etiquette in an age when the handwritten thank-you note is all but obsolete.

Biosurveillance Taha Kass-Hout,Xiaohui Zhang,2010-11-09 As evidenced by the anthrax attacks in 2001, the SARS outbreak in 2003, and the H1N1 influenza pandemic in 2009, a pathogen does not recognize geographic or national boundaries, often leading to devastating consequences. Automated biosurveillance systems have emerged as key solutions for mitigating current and future health-related events. Focusing on this promising public health innovation, *Biosurveillance: Methods and Case Studies* discusses how these systems churn through vast amounts of health-related data to support epidemiologists and public health officials in the early identification, situation awareness, and response management of natural and man-made health-related events. The book follows a natural sequence from theory to application. The initial chapters build a foundation while subsequent chapters present more applied case studies from around the world, including China, the United States, Denmark, and the Asia-Pacific region. The contributors share candid, first-hand insights on lessons learned and unresolved issues that will help chart the future of biosurveillance. As this book illustrates, biosurveillance operates in a complex, multidimensional problem space that incorporates varied data. Capturing the progress of modern-day pioneers who are walking in John Snow's footsteps, this volume shows how contemporary information technology can be applied to the age-old challenge of combating the spread of disease and illness.

SMS Uprising: Mobile Activism in Africa Sokari Ekine,2010-01-30 Providing a unique insight into how activists and social change advocates are addressing Africa's many challenges from within, this collection of essays by those engaged in using mobile phone technologies for social change provides an analysis of the socioeconomic, political, and media contexts faced by activists in Africa today. The articles address a broad range of issues--including inequalities in access to technology based on gender and rural and urban usage--and it offers practical examples of how activists are using mobile technology to organize and document their experiences. An overview of the lessons learned in making effective use of mobile phone technologies without any of the romanticism so often associated with the use of new technologies for social change is given. Examples are shared in a way that makes them easy to replicate, hoping to lead to greater reflection about the real potential and limitations of mobile technologies. Contributors include Ken Banks, Nathan Eagle, Anil Naidoo, Berna Ngolobe, and Juliana Rotich.

Margin of Victory Nathaniel G. Pearlman,2012-04-06 This book illuminates modern political technology, examining important technologies, companies, and

people; putting recent innovations into historical context; and describing the possible future uses of technology in electoral politics. Despite a decade of political technology's celebrated triumphs—such as online fundraising of the presidential campaigns of McCain in 2000, Dean in 2003, and Obama in 2008; or the web-enabled, socially networked campaign of Obama 2008—the field of e-politics is still at an unsolidified stage. *Margin of Victory: How Technologists Help Politicians Win Elections* offers an unprecedented insiders' view of the fast-changing role of political technology that explains how innovations in the use of new media, software tools, data, and analytics hold yet untapped potential. Contributions from leading practitioners in this highly specialized field cover everything from political blogs to targeting mobile devices to utilizing software created specifically to manage campaigns. The book documents how political technology is still in an early stage, despite its enormous advances in recent years, and how the strategies that work today will inevitably be superseded as new technologies arrive and potential voters become less receptive to the previous campaign's tactics.
