

Massage Therapy

Trish Dryden, Christopher A. Moyer

Basic Clinical Massage Therapy James H. Clay, 2008 This superbly illustrated text familiarizes students with individual muscles and muscle systems and demonstrates basic clinical massage therapy techniques. More than 550 full-color illustrations of internal structures are embedded into photographs of live models to show each muscle or muscle group, surrounding structures, surface landmarks, and the therapist's hands. Students see clearly which muscle is being worked, where it is, where it is attached, how it can be accessed manually, what problems it can cause, and how treatment techniques are performed. This edition features improved illustrations of draping and includes palpation for each muscle. An accompanying Real Bodywork DVD includes video demonstrations of massage techniques from the book.

Massage Therapy Trish Dryden, Christopher A. Moyer, 2012-04-10 *Massage Therapy: Integrating Research and Practice* presents the latest research examining the evidence for the use of various massage therapy techniques in treating pathological conditions and special populations. In this resource readers will find a synthesis of information from the diverse fields of kinesiology, medicine, nursing, physical therapy, and psychology. Authored by experts carefully selected for their specific knowledge, experience, and research acumen, *Massage Therapy: Integrating Research and Practice* will assist both students and practitioners in these areas:

- Learning the benefits of evidence-based massage therapy practice
- Understanding various research methods
- Developing research skills by learning guidelines for writing case reports and journal articles
- Understanding how to integrate massage therapy research into education and clinical practice

This text presents a seamless integration of research and practice in four parts,

providing readers first with a background to the field of massage therapy followed by discussion of research methods. Next is an evidence-based presentation of the efficacy of massage therapy for conditions and populations often encountered in massage therapy practice. This clinical section presents three patient populations (pediatric, athletic, and elderly); three pain-related types (headache, neck and shoulder pain, and low back pain); and six conditions that massage therapists may encounter: pregnancy and labor, scar treatment, cancer, fibromyalgia, anxiety and depression, and clients who have experienced sexual trauma. Recommendations and evidence-based treatment guidelines are clearly defined for each condition. Case reports developed from real-life cases are included in this section, offering readers a real-world context for the clinical content presented. The final section illustrates specific ways to integrate research into the educational and professional development of current and future massage therapists. It provides readers with the fundamental tools for a research-based approach in clinical practice, especially as it relates to special populations. A running glossary, chapter summaries, and critical thinking questions assist students in learning the content and act as self-study tools for practitioners. **Massage Therapy: Integrating Research and Practice** offers both students and practitioners of massage therapy the most current evidence-based information, guidelines, and recommendations for the treatment of conditions often seen in massage therapy practice. This essential reference will assist practitioners in understanding the scientific literature and its application in enhancing the practice of this safe and effective health intervention.
