Deploying Machine Learning Robbie Allen,2019-05
Increasingly, business leaders and managers recognize
that machine learning offers their companies immense
opportunities for competitive advantage. But most
discussions of machine learning are intensely technical or
academic, and don't offer practical information leaders can
use to identify, evaluate, plan, or manage projects.
Deploying Machine Learning fills that gap, helping them
clarify exactly how machine learning can help them, and
collaborate with technologists to actually apply it
successfully. You'll learn: What machine learning is, how it
compares to big data and artificial intelligence, and why
it's suddenly so important What machine learning can do
for you: solutions for computer vision, natural language
processing, prediction, and more How to use machine

learning to solve real business problems -- from reducing costs through improving decision-making and introducing new products Separating hype from reality: identifying pitfalls, limitations, and misconceptions upfront Knowing enough about the technology to work effectively with your technical team Getting the data right: sourcing, collection, governance, security, and culture Solving harder problems: exploring deep learning and other advanced techniques Understanding today's machine learning software and hardware ecosystem Evaluating potential projects, and addressing workforce concerns Staffing your project, acquiring the right tools, and building a workable project plan Interpreting results -- and building an organization that can increasingly learn from data Using machine learning responsibly and ethically Preparing for tomorrow's advances The authors conclude with five chapter-length case studies: image, text, and video analysis, chatbots, and prediction applications. For each, they don't just present results: they also illuminate the process the company undertook, and the pitfalls it overcame along the way.
