Learn Maths For Grade 1 - Logic Trainer For Kids Ages 6 to 8 Brain Trainer,2020-06-10 The importance of early childhood mathematics: There is a growing body of evidence suggesting that children from birth to age 8, are capable of more advanced mathematical thinking in the areas of number, geometry, measurement, algebraic thinking, and data analysis than what was thought in years prior (Hachey, 2013). In early childhood education it has been demonstrated that a correlation exists between the level of a child's mathematical ability and their future academic success. The reverse of this relationship has also been observed, where children who are behind the mathematical skills of their peers, continue to fall behind in future studies (Pelkowski, et al. 2019). Furthermore, it is well established in literature that the more maths learning opportunities a child is exposed to, the more growth they will experience in math knowledge (Piasta, et al. 2015). This book is designed to provide a math learning opportunity to foster the curiosity and confidence of children aged 6-8 and set them well on the path to academic success. These 36 math logic puzzles will engage and stimulate your child's problem solving ability through addition and subtraction of healthy foods.

Struck by Genius Jason Padgett, Maureen Seaberg, 2014-04-22 From head trauma to scientific wonder—a “deeply absorbing . . . fascinating” true story of acquired savant syndrome (Entertainment Weekly). Twelve years ago, Jason Padgett had never made it past pre-algebra. But a violent mugging forever altered the way his brain worked. It turned an ordinary math-averse student into an extraordinary young man with a unique gift to see the world as no one else does: water pours from the faucet in crystalline patterns, numbers call to mind distinct geometric shapes, and intricate fractal patterns emerge from the movement of tree branches, revealing the intrinsic mathematical designs hidden in the objects around us. As his ability to understand physics skyrocketed, the “accidental genius” developed the astonishing ability to draw the complex geometric shapes he saw everywhere. Overcoming huge setbacks and embracing his new mind, Padgett “gained a vision of the world that is as beautiful as it is challenging.” Along the way he fell in love, found joy in numbers, and spent plenty of time having his head examined (The New York Times Book Review). Illustrated with Jason’s stunning, mathematically precise artwork, his singular story reveals the wondrous potential of the human brain, and “an incredible phenomenon which points toward dormant potential—a little Rain Man perhaps—within us all” (Darold A. Treffert, MD, author of Islands of Genius: The Bountiful Mind of the Autistic, Acquired, and Sudden Savant). “A tale worthy of Ripley’s Believe It or Not! . . . This memoir sends a hopeful message to families touched by brain injury, autism, or neurological damage from strokes.” —Booklist “How extraordinary it is to contemplate the bizarre gifts that might lie within all of us.” —People
