Helping Your Child Learn Math Patsy F. Kanter, 1992 Teaching school survival skills for young children--emphasis on learning math. Includes information for parents and hands-on lessons and projects for children.

The Verbal Math Lesson Book 2 Michael Levin, Charan Langton, 2014-04 Everyone thinks kids hate math. But the truth is, kids don't hate math they hate worksheets! Writing down equations takes fine motor skills that young children haven't yet developed, making the process of learning math difficult and tedious. Math done mentally, or verbal math, makes math fun. Children see math problems as a game and a challenge. In the second edition of this pioneering educational bestseller, handwriting is removed from math problems to help children cement fundamental mathematical skills so that they may solve problems without having to do any writing at all. Developed as a supplement to traditional math education, the lesson is completely comprehensive, step-by-step, and leaves no area undone. The second book of the series is meant for children between the ages of 7 and 8.

The Best Way to Learn Multiplication Tables Oksana Siniukov, Maryna Kuznetsova, Math Country, 2020-04-09 The Math Country team is made up of practicing mathematics teachers with a combined teaching experience of more than 35 years, who are also authors of unique methods of intensive children's education. In any beginner math course a big chunk of time is spent on learning the multiplication table. It's not a secret that just memorizing

tables isn't fun for kids. It's proportionate how much work has to be put in to somehow convince the kid that learning this table will in fact be useful later in life. The multiplication table isn't easy for kids to remember, so a big part of this training regime is spent on making it easier for kids to memorize it. It is critical that the child experiences the joy of figuring out ideas on their own, that they form self-esteem and trust in their own abilities, and also the curiosity to learn. These are the defining factors when it comes to accessing the overall intellectual development of a child. The material is recommended for self-training of grade 2-3 classes. The contents naturally join into the material kids of that age are learning in school about multiplication tables. Our material fits into any education program. The system of additional exercises leads to development of mental abilities such as: memory, attention, imagination, logical and spatial thinking, and artistic abilities. Instead of tedious repetitive memorization, the child will understand and easily remember the multiplication material. Exercises that are interesting allow those learning to quicker acquire the material and appreciate math for what it is, not just tedious repetitive memorization.

Math Fact Fluency Jennifer Bay-Williams, Gina Kling, 2019-01-14 This approach to teaching basic math facts, grounded in years of research, will transform students' learning of basic facts and help them become more confident, adept, and successful at math. Mastering the basic facts for addition, subtraction, multiplication, and division is an essential goal for all students. Most educators also agree that success at higher levels of math hinges on this fundamental skill. But what's the best way to get there? Are flash cards, drills, and timed tests the answer? If so, then why do students go into the upper elementary grades (and beyond) still counting on their fingers or experiencing math anxiety? What does research say about teaching basic math facts so they will stick? In *Math Fact Fluency*, experts Jennifer Bay-Williams and Gina Kling provide the answers to these questions—and so much more. This book offers everything a teacher needs to teach, assess, and communicate with parents about basic math fact instruction, including The five fundamentals of fact fluency, which provide a research-based framework for effective instruction in the basic facts. Strategies students can use to find facts that are not yet committed to memory. More than 40 easy-to-make, easy-to-use games that provide engaging fact practice. More than 20 assessment tools that provide useful data on fact fluency and mastery. Suggestions and strategies for collaborating with families to help their children master the basic math facts. *Math Fact Fluency* is an indispensable guide for any educator who needs to teach basic math facts.
