Innovative Assessment for the 21st Century Valerie J. Shute,Betsy Jane Becker,2010-09-08 In today's rapidly changing and information-rich world, students are not acquiring adequate knowledge and skills to prepare them for careers in mathematics, science, and technology with the traditional approach to assessment and instruction. New competencies (e.g., information communication and technology skills) are needed to deal successfully with the deluge of data. In order to accomplish this, new educationally valuable skills must be acknowledged and assessed. Toward this end, the skills we value and support for a society producing knowledge workers, not simply service workers, must be identified, together with methods for their measurement. Innovative Assessment for the 21st Century explores the faces of future assessment—and ask hard questions, such as: What would an assessment that captures all of the above attributes look like? Should it be standardized? What is the role of the professional teacher?

Concepts of Biology Samantha Fowler,Rebecca Roush,James Wise,2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Blood Oxidant Ties: The Evolving Concepts in Myocardial Injury and Cardiovascular Disease Bashir Matata,Maqsood Elahi,Priscilla Day-Walsh,2023-07-18 Blood Oxidant Ties: The Evolving Concepts in Myocardial Injury and Cardiovascular Disease is an update on the recent advances in the development of antioxidant-based therapies. It starts with an overview of the mechanisms underlying the genesis of oxidative stress, summarizing the link between oxidative stress and a number of cardiovascular conditions. This is followed by an explanation of how oxidative stress interacts with lipid metabolism and the placental environment. Three chapters on the role of antioxidant-based therapy for cardiovascular diseases round up the book. Key Features - Outlines several cell-signaling pathways that are modulated by the interplay between reducing and oxidizing agents (redox status) and gene expression in the cardiovascular disease process - Brings information about maternal programming environment in the placenta - Covers development of novel nanotechnology-based antioxidant delivery systems for effective drug delivery - Includes references for further reading The book is aimed at a broad readership of scientific and medical professionals involved in research on cardiovascular diseases, pathophysiology, pharmacy, pharmaceutical science and life sciences. It also serves as a reference for scholars who want to understand the complex biochemical mechanisms of antioxidant agents.

Aesthetic Concepts Emily Brady,Jerrold Levinson,2001 Aesthetic Concepts is an exploration of key topics in contemporary aesthetics that arise from the seminal work of Frank Sibley (1923-1996). Sibley developed a distinctive aesthetic theory through a number of papers published between 1955 and 1995 (a selection of which, entitled Approach to Aesthetics, is also published by OUP). Sibley's theory is grounded in the important and influential distinction he made between aesthetic and non-aesthetic concepts in his ground-breaking paper, 'Aesthetic Concepts'. Thirteen specially written essays by British and American philosophical aestheticians bring Sibley's insight into a contemporary framework, exploring the ways his ideas give rise to important new discussion about issues in aesthetics that greatly interested him. These include: the differences and relationships between aesthetic concepts and other types of concepts, aesthetic realism and objectivity, methods of aesthetic evaluation in practice and in theory, the boundaries of aesthetics, and aesthetics of nature versus aesthetics of art. This collection will be of interest to scholars in philosophy, art theory, and art criticism.

Essential Current Concepts in Stem Cell Biology Beate Brand-Saberi,2020-01-03 This textbook describes the biology of different adult stem cell types and outlines the current level of knowledge in the field. It clearly explains the basics of hematopoietic, mesenchymal and cord blood stem cells and also covers induced pluripotent stem cells. Further, it includes a chapter on ethical aspects of human stem cell research, which promotes critical thinking and responsible handling of the material. Based on the international masters program Molecular and Developmental Stem Cell Biology taught at Ruhr-University Bochum and Tongji University Shanghai, the book is a valuable source for postdocs and researchers working with stem cells and also offers essential insights for physicians and dentists wishing to expand their knowledge. This textbook is a valuable complement to Concepts and Applications of Stem Cell Biology, also published in the Learning Materials in Biosciences textbook series.

The Origin of Concepts Susan Carey,2011 Carey begins by characterizing the innate starting point for conceptual development, namely systems of core cognition. Representations of core cognition are the output of dedicated input analyzers, as with perceptual representations, but these core representations differ from perceptual representations in having more abstract contents and richer functional roles. Carey argues that the key to understanding cognitive development lies in recognizing conceptual discontinuities in which new representational systems emerge that have more expressive power than core cognition and are also incommensurate with core cognition and other earlier representational systems. Finally, Carey fleshes out Quinian bootstrapping, a learning mechanism that has been repeatedly

sketched in the literature on the history and philosophy of science. She demonstrates that Quinian bootstrapping is a major mechanism in the construction of new representational resources over the course of children's cognitive development.

Collaborative Business Ecosystems and Virtual Enterprises Luis M. Camarinha-Matos, 2013-06-29 Towards collaborative business ecosystems Last decade was fertile in the emerging of new collaboration mechanisms and forms of dynamic virtual organizations, leading to the concept of dynamic business ecosystem, which is supported (or induced ?) by the progress of the ubiquitous I pervasive computing and networking. The new technologies, collaborative business models, and organizational forms supported by networking tools invade all traditional businesses and organizations what requires thinking in terms of whole systems, i. e. seeing each business as part of a wider economic ecosystem and environment. It is also becoming evident that the agile formation of very dynamic virtual organizations depends on the existence of a proper longer-term embedding or nesting environment (e. g. regional industry cluster), in order to guarantee certain basic requirements such as trust building (Trusting your partner is a gradual and long process); common interoperability, ontology, and distributed collaboration infrastructures; agreed business practices (requiring substantial engineering Ire-engineering efforts); a sense of community (we vs. the others), and some sense of stability (when is a dynamic state or a stationary state useful). The more frequent situation is the case in which this nesting environment is formed by organizations located in a common region, although geography is not a major facet when cooperation is supported by computer networks.

Transitions Theory Afaf I. Meleis, PhD, DrPS (hon), FAAN, 2010-02-17 It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature. Score: 95, 4 Stars. --Doody's Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory. Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original transitions theory that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy,

old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

Modes of Religiosity Harvey Whitehouse,2004 Religions--whatever else they may be--are configurations of cultural information reproduced across space and time. Beginning with this seemingly obvious fact of religious transmission, Harvey Whitehouse goes on to construct a testable theory of how religions are created, passed on, and changed. At the center of his theory are two divergent 'modes of religiosity: ' the imagistic and the doctrinal. Drawing from recent advances in cognitive science, Whitehouse's theory shows how religions tend to coalesce around one of these two poles depending on how religious behaviors are remembered. In the 'imagistic mode, ' rituals have a lasting impact on people's minds, haunting not only our memories but influencing the way we ruminate on religious topics. These psychological features are linked to the scale and structure of religious communities, fostering small, exclusive, and ideologically heterogeneous ritual groupings or factions. In the 'doctrinal mode', on the other hand, religious knowledge is primarily spread through intensive and repetitive teaching; religious communities are contrastingly large, inclusive, and centrally regulated. While these tendencies have long been recognized in the history of the study of religion, the modes of religiosity theory is unique in that it explains why these tendencies exist. More importantly, Whitehouse does not give the final word, but invites us to join a series of collaborative networks among anthropologists, historians, archaeologists, and psychologists, currently trying to falsify, confirm, or refine the theory. Are you tired of the flood of descriptions and interpretations of religions which offer no clear strategy for evaluation, comparison, and testing? Modes of Religiosity can provide you with a new way to think when you think about religion.

NICOMACHEAN ETHICS Aristotle,2017-04-20 **EVERY** art and every inquiry, and similarly every action and pursuit, is thought to aim at some good; and for this reason the good has rightly been declared to be that at which all things aim. But a certain difference is found among ends; some are activities, others are products apart from the activities that produce them. Where there are ends apart from the actions, it is the nature of the products to be better than the activities. Now, as there are many actions, arts, and sciences, their ends also are many; the end of the medical art is health, that of shipbuilding a vessel, that of strategy victory, that of economics wealth. But where such arts fall under a single capacity- as bridle-making and the other arts concerned with the equipment of horses fall under the art of riding, and this and every military action under strategy, in the same way other arts fall under yet others- in all of these the ends of the master arts are to be preferred to all the subordinate ends; for it is for the sake of the former that the latter are pursued. It makes no difference whether the activities themselves are the ends of the actions, or something else apart from the activities, as in the case of the sciences just mentioned.
