**Decision-making on Mega-projects** Hugo Priemus,Bent Flyvbjerg,Bert van Wee,2008-01-01 It will be useful for those experienced and senior professionals who are charged with authorizing and controlling projects. Recommended. P.F. Rad, Choice Building on the seminal work of Bent Flyvbjerg, this book is a collection of expert contributions that will prove essential to anyone wanting to understand why mega-projects go wrong and how they can be made to work better. Professor Sir Peter Hall, University College London, UK This book offers a refreshing and fascinating look at mega-projects from the perspective of public evaluation and planning. With the changing role of the public sector in planning and implementing large-scale projects and a subsequent strong emergence of private public modes of operation, mega-projects have become a problematic phenomenon. This volume is a major source of information and reference. It provides the reader with unique insights and caveats in mega-projects planning. Peter Nijkamp, VU University Amsterdam, The Netherlands This book enlarges the understanding of decision-making on mega-projects and suggest recommendations for a more effective, efficient and democratic approach. Authors from different scientific disciplines address various aspects of the decision-making process, such as management characteristics and cost benefit analysis, planning and innovation and competition and institutions. The subject matter is highly diverse, but certain questions remain at the forefront. For example, how do we deal with protracted preparation processes, how do we tackle risks and uncertainties, and how can we best divide the risks and responsibilities among the private and public players throughout the different phases of the project? Presenting a state-of-the-art overview, based on experiences and visions of authors from Europe and North America, this unique book will be of interest to practitioners of large-scale project management, politicians, public officials and private organisations involved in mega-project decision-making. It will also appeal to researchers, consultants and students dealing with substantial engineering projects, complex systems, project management and transport infrastructure.

Neurointervention in the Medical Specialties Randall C. Edgell,Sean I. Savitz,John Dalfino,2014-11-26 Neurointervention in the Medical Specialties is a first-of-its-kind reference that serves as a bridge between the neurointerventionalist and the physicians who most frequently look to these specialists for answers to some of the most intractable problems they face. Providing background on the wide range of diseases treated through

neurointervention along with the indications and alternatives to such treatments, this landmark title is grouped into four parts: an introduction to the tools and anatomical structures that are integral to the field; disease processes most often encountered by neurologists, cardiologists, and vascular surgeons; those diseases more frequently treated by neurosurgeons; and finally those diseases first seen by several other specialties including ophthalmologists and head and neck surgeons. Importantly, each chapter includes details of neurointerventional technique and case discussions that are sufficiently detailed to provide a treatment template and guidance to neurointerventionalists in training and practice. At the same time, the descriptions provide referring physicians with insight into how neurointerventional procedures are performed. Finally, there are several concluding, thought-provoking chapters that examine what new opportunities await the field of neurointervention on the horizon. Neurointervention in the Medical Specialties is a major contribution to the literature and invaluable resource for all clinicians and researchers interested in this exciting field.

*Introduction to Rural Planning* Nick Gallent, Iqbal Hamiduddin, Meri Juntti, Sue Kidd, Dave Shaw, 2015-06-30

*Introduction to Rural Planning: Economies, Communities and Landscapes* provides a critical analysis of the key challenges facing rural places and the ways that public policy and community action shape rural spaces. The second edition provides an examination of the composite nature of 'rural planning', which combines land-use and spatial planning elements with community action, countryside management and the projects and programmes of national and supra-national agencies and organisations. It also offers a broad analysis of entrepreneurial social action as a shaper of rural outcomes, with particular coverage of the localism agenda and Neighbourhood Planning in England. With a focus on accessibility and rural transport provision, this book examines the governance arrangements needed to deliver integrated solutions spanning urban and rural places. Through an examination of the ecosystem approach to environmental planning, it links the procurement of ecosystem services to the global challenges of habitat degradation and loss, climate change and resource scarcity and management. A valuable resource for students of planning, rural development and rural geography, *Introduction to Rural Planning* aims to make sense of current rural challenges and planning approaches, evaluating the currency of the 'rural' label in the context of global urbanisation, arguing that rural spaces are relational spaces characterised by critical production and consumption tensions.

How Much Is Clean Air Worth? Ari Rabl, Joseph V. Spadaro, Mike Holland, 2014-07-10

*How Much is Clean Air Worth?* offers readers a comprehensive overview of the core methodologies and tools used to quantify the impacts and damage costs of pollution. The book begins by reviewing the tools used for environmental assessments and shows that a rational approach requires an impact pathway analysis (IPA) for each of the possible impacts of a pollutant, i.e. an analysis of the chain emission -> dispersion -> exposure-response functions -> monetary valuation. The IPA methodology is explained in full and illustrated with worked examples, and difficulties are discussed and uncertainties analysed. In addition to detailed computer models, a very simple model (the 'Uniform World Model') is presented, enabling readers to make estimates for cases where no results are available. Published results for electricity, waste treatment and transport are reviewed, with a thorough discussion of policy implications. This book will appeal to a broad mix of academics, graduate students and practitioners in government and industry working on cost-benefit analysis, environmental impact analysis and environmental policy.

From Individual Wellbeing to Regional Priorities Silva Larson, 2011-07-12

The understanding of subjective perceptions of wellbeing, that is, the perceived needs and current levels of satisfactions of people, could provide valuable information for policy and decision makers. It would allow for the mapping of the envisaged impacts of policy against things that people value and care about, thus providing information about the positive and negative potential of different policy options to impact upon human welfare. In this book, Dr Silva Larson takes us on a journey of explorations into the things that are important to people. She argues that an approach which takes into account both what people value most and how satisfied they are with the current state of affairs would assist decision makers with identifying perceived regional priorities. Further, she proposes and describes one such approach, that of using a quantitative composite value that combines both types of information, and demonstrates, using two shires in the Great Barrier Reef region of Australia as examples, how this can be done. The resulting "action lists" identify and quantify the unsatisfied needs of most importance to most people in the region, that is, factors that have high potential to improve the quality of life of residents, if restored.

**An Introduction to Clinical Research for Health and Social Care Professionals** Ario Santini, Kenneth A

Eaton, 2022-05-22 With the increasing emphasis on evidence-based practice, there is a need for all health and social care professionals to understand the principles of general and clinical research. In the United Kingdom and several other countries, this had led to a proliferation of advanced programs, including for those seeking

doctorate degrees. In this book, the editors introduce readers to the principles and practice of clinical research. Eighteen chapters and three appendices provide guidance on the different stages of a research project, from inception to the dissemination of results. Topics include: • steps to engage in practice-based research; • ethical questions surrounding research; • sources of funding; • collecting and collating data. Contributing authors emphasize the need to critically appraise literature before carrying out a research project. They also explain the stages of a research project and share insights on where to go for more information. The book includes an index, a glossary, and charts and figures to promote learning. Discussion questions reinforce critical material.
