Continuous Renal Replacement Therapy John A. Kellum, Rinaldo Bellomo, Claudio Ronco, 2016 Continuous Renal Replacement Therapy (CRRT) is the standard of care for management of critically ill patients with acute renal failure. Part of the Pittsburgh Critical Care series, Continuous Renal Replacement Therapy provides concise, evidence-based, bedside guidance about this treatment modality, offering quick reference answers to clinicians' questions about treatments and situations encountered in daily practice. Organized into sections on theory, practice, special situations, and organizational issues, this volume provides a complete view of CRRT theory and practice. Tables summarize and highlight key points, and key studies and trials are included in each chapter. The second edition has been updated to include a new chapter on the use of biomarkers to aid in patient selection and timing, extensive revisions on terminology and nomenclature to match current standards, and the most up-to-date information on newly developed CRRT machines.

Cardiorenal Syndromes in Critical Care C. Ronco, R. Bellomo, P.A. McCullough, 2010-05-04 Critical care nephrology is an emerging multidisciplinary science in which the competences of different specialists are merged to provide a unified diagnostic and therapeutic approach to the critically ill patient. The volume at hand places great emphasis on cardiorenal syndromes and the multidisciplinary collaboration between cardiology and nephrology. Several contributions describe the cardiorenal syndrome in its different varieties and subtypes and report the results from the most recent Acute Dialysis Quality Initiative Consensus Conference, as well as proposing new diagnostic approaches based on early biomarkers of AKI. Other papers discuss advances in technology for renal replacement therapy and multiple organ support therapy. Moreover, special emphasis is placed on the potential role of extracorporeal therapies in patients affected by H1N1 influenza, and a summary of the most recent trials in the field is included. Containing the proceedings of the 2010 International Vicenza Course on Critical Care Nephrology, this publication is a state-of-the-art appraisal of today's technology and current issues related to cardiorenal syndromes.

Renal Function in Acute and Chronic Kidney Diseases John D. Imig, Xueying Zhao, Md Abdul Hye Khan, 2021-01-18

Neutrophil Gelatinase-associated Lipocalin Mina Hur, Salvatore Di Somma, 2014 Acute kidney injury (AKI), defined as an abrupt decrease in renal function over a period of hours to days, is a common complication among hospitalised patients with different acute diseases. Its incidence has been increasing in recent years and is reported to be very high especially in the acute settings. Since clinical signs and symptoms of acute renal damage are not specific, it is difficult to promptly distinguish AKI at the time of patient presentation. Currently the diagnosis of AKI requires serial assessment of laboratory tests over a period of several days, and is based mainly on the evaluation of serum creatinine (sCr) and decrease in urine output as supported by Risk, Injury, Failure, Loss, and End-Stage Kidney Disease (RIFLE) criteria, Acute Kidney Injury Network (AKIN) criteria, and the recent Kidney Disease: Improving Global Outcomes (KDIGO) practice guidelines for AKI. Such a need for repeated sCr evaluations and monitoring of urinary output for too long time after admission could therefore result in a diagnostic delay. With delays in diagnosis, clinicians miss opportunities to start appropriate treatment to minimise damage, and patients incur more severe AKI with subsequent greater risk of developing progression of renal damage leading to chronic kidney disease (CKD), dialysis and increased risk of severe cardiovascular diseases and death.

Acute kidney injury Sics Editore, 2014-10-01 In acute kidney injury (AKI) the ability of the glomeruli to filtrate deteriorates, which leads to a disturbed acid-base and fluid balance as well as to the accumulation of end products of nitrogen metabolism. Within 24 to 48 hours of the onset of the injury the serum creatinine concentration will rise and urine output fall. AKI should be identified before the creatinine concentration is markedly increased and the estimated glomerular filtration rate (eGFR) falls. A typical patient is an elderly individual with pre-existing renal impairment who, for example, contracts acute diarrhoea or receives nephrotoxic drugs (e.g. NSAIDs, ACE inhibitors), i.e. acute-on-chronic kidney disease. Hypovolaemia is the most common cause of oliguria and can be reversed with fluid therapy. The urine output of a seriously ill patient must be monitored. Urinary

retention must be identified and treated. The concomitant administration of an ACE inhibitor, diuretic and NSAID increases the risk of AKI.

Acute Kidney Injury Demystified Ankita Kashyap, Krishna N. Sharma, 2023-12-30

Diagnostics, Risk Factors, Treatment and Outcomes of Acute Kidney Injury in a New Paradigm Wisit Cheungpasitporn, Charat Thongprayoon, Wisit Kaewput, 2020-12-10 Acute kidney injury (AKI) is a frequent clinical syndrome among hospitalized patients, independently associated with both short- and long-term mortality. Previous investigations attempted to identify effective interventions to prevent AKI or promote kidney function recovery in patients with AKI. Most were unsuccessful. Hence, additional studies are required in the field of AKI research. In this Special Issue, we are making a call to action to stimulate researchers and clinicians to submit their studies on AKI conducted in nephrology, internal medicine, critical care, and other disciplines that will provide additional knowledge and skills in the field of AKI research, ultimately to improve patient outcomes.

Perioperative Kidney Injury Charuhas V. Thakar, Chirag R. Parikh, 2014-10-21 The kidneys participate in all vital processes of the body to maintain overall homeostasis and health. When kidneys are injured during surgical interventions, metabolic and hemodynamic control is disrupted, leading to dysfunction associated with greater mortality, length of hospital stay and cost. Perioperative Kidney Injury presents the epidemiology, risk factors, diagnosis, treatment and outcomes associated with kidney injury during the peri-operative period. Concepts and principles of care to prevent kidney complications during surgical procedures are provided to equip health care professionals along with strategies to manage acute kidney injury and associated challenges when they occur. Chapters detail diverse surgical settings, ranging from the more common, such as abdominal, cardiac and vascular surgeries, to the intricately complex, including the use of the left ventricular assist device and organ transplants. This practical and comprehensive text blends the evidence-based standards of care with cutting edge advances in the field, while also providing the reader with a peek into innovations on the horizon.

ADQI Consensus on AKI Biomarkers and Cardiorenal Syndromes J.A. Kellum, P.A. McCullough, R.L. Mehta, P.T. Murray, C. Ronco, 2013-05-14 Associated with both acute kidney injury (AKI) and cardio-renal syndromes (CRS), new biomarkers represent both a popular area of investigation and a new opportunity for advancement of therapy. This book contains the resolutions of the most recent ADQI conferences on biomarkers in AKI (Dublin) and on cardio-renal syndromes (Venice). The first part answers specific questions about new biomarkers and their use and utility in AKI: What are the most suitable candidate molecules and physiologic measures, how solid and evidence based is the discovery phase? How can we incorporate the new biomarkers in the AKI conceptual model describing the evolution from susceptibility to insult, decreased GFR and organ death? Even if we have a positive biomarker pattern and we can identify patients at risk or patients with early or even subclinical AKI, how is this information affecting our clinical behavior and practice? The second part is dedicated to the appraisal of the current knowledge about the pathophysiological mechanisms involved in different forms of CRS: it contains contributions on the state-of-the-art knowledge and practice of CRS, particularly focusing on the pathophysiology of the

five subtypes. Acute and chronic mechanisms of damage are explored in depth, with particular attention to the primacy of organ involvement and the subsequent pathways of organ crosstalk. Presenting the most recent research in the field of biomarkers, AKI and CRS, this publication is an important educational tool for advanced investigators and clinical experts, but also for students and fellows.

Controversies in Acute Kidney Injury J.A. Kellum, C. Ronco, J.-L. Vincent, 2011-09-15 Acute kidney injury (AKI) is a serious and as yet incompletely understood disorder in which sudden impairment of kidney function occurs secondary to one or more of a variety of underlying conditions. This disorder is very common in (elderly) ICU patients and is associated with very high mortality. Many of those who survive suffer from permanent kidney failure and other long-term morbidities, which may include cardiovascular disease and immune dysfunction. Epidemiologic evidence suggests that AKI is not a single disease, but a syndrome comprised of multiple, often coexisting, etiologies. Being usually part of multiorgan failure syndrome, it calls for multiple organ support therapy. The publication at hand contains sections on prerenal azotemia syndromes, dying 'of' or 'with' AKI, pathophysiology of sepsis-induced acute kidney injury, developments in prevention / treatment / rehabilitation, and renal support. Reporting the latest recommendations from experts, it provides valuable information for those that are interested in understanding the disorder and its treatment options.

Renal Disease in Cancer Patients Kevin W. Finkel, Scott C. Howard, 2013-10-02 Renal Disease in Cancer Patients is a translational reference detailing the nephrological problems unique to patients with cancer in an organized and authoritative fashion. This book provides a common language for nephrologists, oncologists, hematologists, and other clinicians who treat cancer patients, to discuss the development of renal diseases in the context of cancer and options for their optimum diagnosis, management, and treatment. With the advent of better supportive care and the era of personalized medicine, patients with cancer are living longer, and oncologists and nephrologists now recognize the serious consequences of renal disease among these patients. Designed especially with this new need in mind, Renal Disease in Cancer Patients presents the various renal diseases affecting cancer patients in a single, authoritative volume. The book covers topics in radiation nephritis, obstructive nephropathy, drug nephropathy, graft-versus-host disease, and more.

Core Concepts in Acute Kidney Injury Sushrut S. Waikar, Patrick T. Murray, Ajay Singh, 2018 This comprehensive guide covers the causes, characteristics, and presentations of acute kidney injury (AKI), as well as prevention and treatment. The first part of the book features chapters on the epidemiology and diagnosis of AKI. This is followed by sections on pathophysiology, clinical syndromes and patient management. Authored by leading clinicians, epidemiologists, basic scientists, and clinical trialists, this book captures the latest evidence and best practices for treating patients with AKI.

Onco-Nephrology E-Book Kevin W. Finkel, Mark Anthony Perazella, Eric P Cohen, 2019-07-02 Kidney disease and cancer are frequent comorbidities that require specialized knowledge and expertise from both the nephrologist and the oncologist. Written by three pioneers in this growing subspecialty, Onco-Nephrology provides authoritative, definitive coverage of the mechanism and management of these two life-threatening diseases. This unique, single-volume resource covers current protocols and recommends management therapies to arrest kidney failure and allow oncologic treatments to continue and succeed. Addresses acute and chronic kidney diseases that develop from a variety of cancers. This includes direct kidney injury from the malignancy, paraneoplastic effects of the cancer, and various cancer agents used to treat the malignancy. Discusses key issues regarding kidney disease in patients with cancer, including conventional chemotherapeutic regimens and new novel therapies (targeted agents and immunotherapies) or the malignancies themselves that may promote kidney injury; patients with chronic kidney disease who acquire cancer unrelated to renal failure; and kidney transplantation, which has been shown to carry an increased risk of cancer. Contains dedicated chapters for each class of the conventional

chemotherapeutic agents, targeted cancer agents, and cancer immunotherapies including the basic science, pathogenic mechanisms of injury, clinical manifestations, and treatment. Includes special chapters devoted to the individual classes of chemotherapies that relate to kidney disease for quick reference. Discusses increasingly complex problems due to more numerous and specialized anti-cancer drugs, as well as increased survival rates for both cancer and renal failure requiring long-term patient care. Covers anti-VEGF (antivascular endothelial growth factor) agents and cancer immunotherapies – treatments that are being recognized for adverse kidney effects. Utilizes a clear, logical format based on the ASN Core Curriculum for Onco-Nephrology, making this reference an excellent tool for board review, as well as a practical resource in daily practice.

Acute Kidney Injury - Basic Research and Clinical Practice X. Ding, M.H. Rosner, C. Ronco, 2018-01-23 Acute Kidney Injury (AKI) is a complex syndrome that is prevalent among hospitalized patients. In recent years, occurrence of AKI events has risen due to a growing susceptibility of fragile and elderly subjects and an increase in the use of complex procedures such as cardiovascular surgery and imaging techniques. Exposure to potentially nephrotoxic drugs, such as new chemotherapeutic agents, is also proving to be a cause of AKI. This book summarizes recent advances in various settings. A reappraisal of current definitions and staging classifications for AKI in the literature is followed by a description of new criteria for identifying patients at risk and characterizing early kidney damage by using biomarkers. Other important topics include the sequelae of AKI and AKI in special populations such as children, the elderly, and those with cancer. The effects of AKI and its consequences on healthcare expenditures are also addressed from several perspectives. AKI management requires the cooperation of different specialists to optimize outcomes. This book is thus a perfect tool not only for nephrologists, but for every specialist involved in the complicated endeavor of improving patient care.

Aspects in Continuous Renal Replacement Therapy Ayman Karkar, 2019-04-17 Continuous renal replacement therapy (CRRT) is a slow and smooth continuous extracorporeal blood purification process. It is usually implemented over 24 hours to several days with gentle removal of fluid overload and excess uremic toxins. CRRT, which is based on the physiological principles of diffusion, ultrafiltration, convection, and adsorption, can be performed as slow continuous ultrafiltration, continuous veno-venous hemofiltration, continuous veno-venous hemodiafiltration, and continuous veno-venous hemodialysis. Over many years, CRRT has been shown to be an effective dialysis therapy for hemodynamically unstable patients with acute kidney injury, brain injury, and/or multiorgan failure in intensive care units. Aspects in CRRT covers selected important topics with a practical approach to the management of different aspects of CRRT. All chapters have been updated and are well referenced, supported by well-illustrated figures and tables, and written by distinguished and experienced authors. Aspects in CRRT is considered as a guide to daily practice in intensive care units, and a reference for medical and nursing staff involved in taking care of critically ill patients with acute kidney injury, sepsis, and multiorgan failure.
