Design and Quality Considerations for Developing Mobile Apps for Medication Management: Emerging Research and Opportunities

Yap, Kevin, Ali, Eskinder Eshetu, Chew, Lita, 2020-07-31 Medication management is an essential component of therapeutic success in the treatment of chronic diseases. However, patients who do not regularly take their prescribed medications are a primary concern of health systems worldwide. A significant proportion of patients on chronic medications fail to adhere to their treatments, and suboptimal adherence leads to dire clinical and financial consequences on the personal level. Moreover, non-adherence can adversely impact public healthcare costs and the clinical outcomes of patients. Design and Quality Considerations for Developing Mobile Apps for Medication Management: Emerging Research and Opportunities is a collection of innovative research that combines theory and practice on optimizing strategies to improve medication adherence and overall health and wellbeing in patients through the design of usable and reliable mobile app-based systems. Highlighting a broad range of topics including pharmaceutical care, quality assessment, and health behavior frameworks, this book is ideally designed for clinicians, pharmacists, healthcare providers, programmers, software developers, researchers, academicians, and students.

Evidence-based Practice for Health Professionals Bernadette Howlett, Ellen J. Rogo, Teresa Gabiola Shelton, 2014 Evidence-based practice (EBP) has become the standard in medical practice today. Evidence-based Practice for Health Professionals: An Interprofessional Approach covers the fundamentals of applying medical evidence to clinical practice and discussing research findings with patients and fellow professionals. This essential text explains the basic concepts of EBP, its applications in medicine, and how to interpret biostatistics and biomedical research. With examples derived from primary care medicine and nursing, evidence-Based Practice for Health Professionals teaches the skills needed to access and interpret research in order to successfully apply it to collaborative, clinical decisions. Students gain valuable practice with skill-building learning activities, such as explaining the evidence for treatments to patients, developing a standard of care, selecting a diagnostic tool, and designing community-based educational materials.

Novel Aspects of Lipoprotein Metabolism with Focus on Systemic Inflammation Robin P.F. Dullaart, 2020-03-10 With cardiometabolic diseases still topping the list of mortality causes and in facing the obesity and diabetes epidemic, there remains a great need to better understand the pathophysiological derangements underlying these conditions. During the past years, it has become increasingly appreciated that low grade systemic inflammation is a common hallmark of cardiometabolic disorders—not only concerning diabetes and atherosclerotic cardiovascular disease but also involving non-alcoholic fatty liver disease. Recently developed high-throughput laboratory techniques for lipidomics and metabolomics have enabled researchers to discern novel crosstalk pathways between lipid phenotypes and enhanced chronic inflammation. With this Special Issue of the Journal of Clinical Medicine, entitled “Novel Aspects of Lipoprotein Metabolism with a Focus on Systemic Inflammation”, researchers were invited to submit original papers and reviews on various topics, in particular, at the interface of lipid metabolism and inflammation.

Principles of Biostatistics Marcello Pagano, Kimberlee Gauvreau, 2018-02-19 This edition is a reprint of the second edition published in 2000 by Brooks/Cole and then Cengage Learning. Principles of Biostatistics is aimed at students in the biological and health sciences who wish to learn modern research methods. It is based on a required course offered at the Harvard School of Public Health. In addition to these graduate students, many health professionals from the Harvard medical area attend as well. The book is divided into three parts. The first five chapters deal with collections of numbers and ways in which to summarize, explore, and explain them. The next two chapters focus on probability and introduce the tools needed for the subsequent investigation of uncertainty. It is only in the eighth chapter and thereafter that the authors distinguish between populations and samples and begin to investigate the inherent variability introduced by sampling, thus progressing to inference. Postponing the slightly more difficult concepts until a solid foundation has been established makes it easier for the reader to comprehend them. All supplements, including a manual for students with solutions for odd-numbered exercises, a manual for instructors with solutions to all exercises, and selected data sets, are available at <http://www.crcpress.com/9781138593145>.

Dosage Calculations Made Incredibly Easy! Springhouse, 2002 This entertaining guide is now more fun, more up-to-date, and even easier to use -- an indispensable resource for nurses who want to take the stress out of dosage calculations. New to this edition are a chapter on dimensional analysis; numerous lighthearted learning aids called Cheat Sheets; and Practice Makes Perfect -- case study questions and answers that let nurses assess their progress. Contents include math basics; measurement systems; drug orders and administration records; calculating oral, topical, and rectal drug dosages; calculating parenteral injections and I.V. infusions; and calculating pediatric, obstetric, and critical care dosages.

The Evolution of Radionanotargeting towards Clinical Precision Oncology: A Festschrift in Honor of Kalevi Kairemo Antti Jekunen, 2022-03-10 The Evolution of Radionanotargeting towards Clinical Precision Oncology is a remarkable book honoring Professor Kalevi Kairemo, who is known among academic and medical circles as a pioneer in novel radiolabeled therapeutics. This festschrift provides an overview of key advances in the field of radionanotargeting, and the directions for future development in patient care. Prof Kairemo's research is based on multiomics, which involves multiple elements: genomics, transcriptomics, proteomics, metabolomics, microbiomics, epigenomics, exposome, imaging, and precision medicine, which is reflected by the unique collection of articles presented. The articles start from the angle of radionanotargeting and theragnostics leading to imaging and therapy, which includes sections for thyroid cancer, head and neck cancer, genitourinary cancers and neuroendocrine neoplasms. Theragnostics, nanoparticles and precision oncology have also been covered in their own segments, while also giving a glimpse of research in metabolic imaging, cardiovascular radionuclide imaging, and bone therapies. The sequence of chapters demonstrates how, through Professor Kairemo's efforts, radionanotargeting has evolved to a practice changing therapeutic approach in the clinic, particularly in oncology. Finally, Professor Kairemo's own memoir, "Seven decades in health care" and memoirs from colleagues including a personal introduction to him with a photographic cavalcade reveals the world of a multitasking person with a multidisciplinary approach to science, that ushered his development of significant expertise across the fields of chemistry, biology, engineering, physics and clinical medicine. This book is excellent for medical historians, trainees and specialists in clinical and radiological oncology in expanding their understanding of the role of radionuclide imaging over the years, making it an ideal tribute that belongs in the library of anyone involved in the field.

Dosage Calculations for Nursing Students Chase Hassen,Bradley J Wojcik,2019-05-11 Welcome to the second edition of our dosage calculations book! Are you a nursing student, or nurse, who wants to learn a few simple methods of solving dosage calculations without a bunch of formulas? Would you like to raise your hand in your dosage calculation class, after the instructor explains a complicated formula, and ask to approach the white board to show the class a much simpler method? Do you want to go on your clinicals knowing that you have a solid foundation in dosage calculations? Do you want to walk into your Nursing Calculations Class on the first day knowing that you can ace all the tests before the course begins? If you answered yes to any of these questions, this book is for you! The book is divided into seven units containing thirty-five chapters. Unit 1: Essential Skills: You can't learn to drive a car if you don't understand the function of the steering wheel. The same applies to the following subjects when learning dosage calculations. The Metric System Apothecary/Avoirdupois/Household Systems Ratios Dimensional Analysis (DA) and Ratio Proportion (RP) Rounding Numbers Military Time Unit 2: Auxiliary Subjects: Roman Numerals Scientific Notation Unit 3: Unit Conversions Unit 3 covers converting between and within the various systems of measurement using dimensional analysis and ratio proportion. Unit conversions Within the Metric System Unit Conversions Within the Household System Unit Conversions Between Metric, Household and Apothecary Systems Unit Conversions Involving Pounds and Ounces Unit Conversions Involving Hours and Minutes Unit 4: Dosage Calculations Unit 4 builds on the knowledge gained in the previous units and covers dosage calculations, starting with the terminology and set up of problems, then progressing from easy, one-step, problems through multi-step problems. Dosage Calculations-The Basics Dosage Calculations Levels 1-3 Body Surface Area Dosing Calculations Pediatric Dosage Calculations Pediatric Maintenance Fluid Replacement Calculations Unit 5: IV Flow Rate Calculations Unit 5 starts with the basic terminology and set up of IV flow rate problems, then moves on to: Simple and Advanced Problems IV Flow Rate Adjustment Calculations Heparin Infusion and Adjustment Calculations Unit 6: Percent and Ratio Strength Calculations Percent, Percent Strength Percent Change Ratio Strength Unit 7: Miscellaneous Subjects Reconstitution Calculations Concentrations and Dilutions Milliequivalent Calculations Dosage Calculations Puzzles Self-Assessment Exam The book contains over 600 high quality practice problems with answers. We look forward to your feedback! Chase Hassen and Brad Wojcik

Barkley Adult ADHD Rating Scale-IV (BAARS-IV) Russell A. Barkley,2011-02-01 The Barkley Adult ADHD Rating Scale-IV (BAARS-IV) offers an essential tool for assessing current ADHD symptoms and domains of impairment as well as recollections of childhood symptoms. Directly linked to DSM-IV diagnostic criteria, the scale includes both self-report and other-report forms (for example, spouse, parent, or sibling). Not only is the BAARS-IV empirically based, reliable, and valid, but it is also exceptionally convenient to use. The long version takes the average adult 5-7 minutes to complete, and the Quick Screen takes only 3-5 minutes. Special features include a section of items assessing the newly identified symptoms of sluggish cognitive tempo, also known as the inattentive-only subtype of ADHD. Complete instructions for scoring and interpreting the scale are provided. See also the Barkley Deficits in Executive Functioning Scale (BDEFS for Adults), which assesses clinically significant executive functioning difficulties, and the Barkley Functional Impairment Scale (BFIS for Adults), which evaluates 15 major domains of psychosocial functioning. Includes Permission to Photocopy Enhancing the convenience and value of the BAARS-IV, the limited photocopy license allows purchasers to reproduce the forms and score sheets and yields considerable cost savings over other available scales. The large format and sturdy wire binding facilitate photocopying.

Calculate with Confidence Deborah Gray Morris,2010 Calculate with Confidence provides a clear consistent format with a step-by-step approach to the calculation and administration of drug dosages. It covers the ratio and proportion, formula, and dimensional analysis methods. This popular text focuses on enhancing the learning experience of students at all curricular levels by making content clinically applicable. Concepts relating to critical thinking, logical thinking, and nursing process are presented throughout. New practice problems have been added throughout this edition and rationales for the answers continue to be provided giving the students a better understanding of principles related to drug dosages. This fifth edition addresses the increasing responsibility of nurses in medication and administration; emphasizes the priority for client care, and presents material that reflects the current scope of the nursing practice. A clear and consistent, step-by-step approach to calculations and administration makes it easy to understand. Ratio and Proportion, Formula, and Dimensional Analysis content provides you with well-rounded coverage. Pretest and post-test help identify strengths and weaknesses in competency of basic math before and assess your comprehension after Unit One: Math Review. Points to Remember boxes highlighted in each chapter help you remember important concepts. Critical thinking information that should be applied in the clinical setting to help avoid drug calculation and administration errors is boxed throughout the text. Full-color illustrations, photographs, and drug labels familiarize you with what you'll encounter in the clinical setting. Current recommendations from The Joint Commission and Institute for Safe Medication Practices are followed throughout. Caution boxes identify issues that may lead to medication errors and strengthen actions that must be taken to avoid calculation errors. Tips for Clinical Practice calls attention to information critical to math calculation and patient safety as well as issues related to practice. Rule boxes familiarize students with information needed to accurately solve drug calculation problems.
