The Media Players Stephen Wittek, 2015-07-16 The Media Players: Shakespeare, Middleton, Jonson, and the Idea of News builds a case for the central, formative function of Shakespeare's theater in the news culture of early modern England. In an analysis that combines historical research with recent developments in public sphere theory, Dr. Stephen Wittek argues that the unique discursive space created by commercial theater helped to foster the conceptual framework that made news possible. Dr. Wittek's analysis focuses on the years between 1590 and 1630, an era of extraordinary advances in English news culture that begins with the first instance of serialized news in England and ends with the emergence of news as a regular, permanent fixture of the marketplace. Notably, this period of expansion in news culture coincided with a correspondingly extraordinary era of theatrical production and innovation, an era that marks the beginning of commercial theater in London, and has left us with the plays of William Shakespeare, Ben Jonson, and Thomas Middleton.

**Microsoft on Trial** Luca Rubini, 2010-01-01 Microsoft on Trial analyses the antitrust cases that have involved Microsoft in both sides of the Atlantic and offers a thorough and timely discussion on the regulation of unilateral behaviour in a topical sector. This fascinating and highly topical book facilitates discussion on the difficult technical, legal and economic issues with respect to innovation, competition and welfare raised, through the span of more than a decade, by the US and EC Microsoft antitrust cases. **The Microsoft Antitrust Cases** Andrew I. Gavil, Harry First, 2014-11-28 A comprehensive account of the decades-long, multiple antitrust actions against Microsoft and an assessment of the effectiveness of antitrust law in the digital age. For more than two decades, the U.S. Department of Justice, various states, the European Commission, and many private litigants pursued antitrust actions against the tech giant Microsoft. In investigating and prosecuting Microsoft, federal and state prosecutors were playing their traditional role of reining in a corporate power intent on eliminating competition. Seen from another perspective, however, the government's prosecution of Microsoft—in which it deployed the century-old Sherman Antitrust Act in the volatile and evolving global business environment of the digital era—was unprecedented. In this book, two experts on competition policy offer a comprehensive account of the multiple antitrust actions against Microsoft—from beginning to end—and an assessment of the effectiveness of antitrust law in the twenty-first century. Gavil and First describe in detail the cases that the Department of Justice and the states initiated in 1998, accusing Microsoft of obstructing browser competition and perpetuating its Windows monopoly. They cover the private litigation that followed, and the European Commission cases decided in 2004 and 2009. They also consider broader issues of competition policy in the age of globalization, addressing the adequacy of today's antitrust laws, their enforcement by multiple parties around the world, and the difficulty of obtaining effective remedies—all lessons learned from the Microsoft cases.

**Multimedia Networks** Hans W. Barz, Gregory A. Bassett, 2016-01-12 The transportation of multimedia over the network requires timely and errorless transmission much more strictly than other data. This had led to special protocols and to special treatment in multimedia applications (telephony, IP-TV, streaming) to overcome network issues. This book begins with an overview of the vast market combined with the user's expectations.

The base mechanisms of the audio/video coding (H.26x etc.) are explained to understand characteristics of the generated network traffic. Further chapters treat common specialized underlying IP network functions which cope with multimedia data in conjunction with special time adaption measures. Based on those standard functions these chapters can treat uniformly SIP, H.248, High-End IP-TV, Webcast, Signage etc. A special section is devoted to home networks which challenge high-end service delivery due to possibly unreliable management. The whole book treats concepts described in accessible IP-based standards and which are implemented broadly. The book is aimed at graduate students/practitioners with good basic knowledge in computer networking. It provides the reader with all concepts of currently used IP technologies of how to deliver multimedia efficiently to the end user.
