Evolution of Telecommunication Services Emmanuel Bertin,Noel Crespi,Thomas

Magedanz,2013-10-14 In the telecom world, services have usually been conceived with a specific mindset. This mindset has defined the traditional characteristics of these services; services distinguished by their linkage with the access network, tight control over service use (e.g., authentication, billing), lack of deep personalization capabilities (mass services only) and reliance on standardization to achieve end-to-end interoperability between all the actors of the value chain (e.g., operators, platform manufacturers, device manufactures). This book offers insights into this complex but exciting world of telecommunications characterized by constant evolution, and approaches it from technology as well as business perspectives. The book is appropriately structured in three parts: (a) an overview of the state-of-the-art in fixed/mobile NGN and standardization activities; (b) an analysis of the competitive landscape between operators, device manufactures and OTT providers, emphasizing why network operators are challenged on their home turf; and (c) opportunities for business modeling and innovative telecom service offers.

Building the Future Internet through FIRE Martin Serrano,Nikolaos Isaris,Hans

Schaffers,2022-09-01 The Internet as we know it today is the result of a continuous activity for improving network communications, end user services, computational processes and also information technology infrastructures. The Internet has become a critical infrastructure for the human-being by offering complex networking services and end-user applications that all together have transformed all aspects, mainly economical, of our lives. Recently, with the advent of new paradigms and the progress in wireless technology, sensor networks and information systems and also the inexorable shift towards everything connected paradigm, first as known as the Internet of Things and lately envisioning into the Internet of Everything, a data-driven society has been created. In a data-driven society, productivity, knowledge, and experience are dependent on increasingly open, dynamic, interdependent and complex Internet services. The challenge for the Internet of the Future design is to build robust enabling technologies, implement and deploy adaptive systems, to create business opportunities considering increasing uncertainties and emergent systemic behaviors where humans and machines seamlessly cooperate.

Media, Surveillance and Affect Nicole Falkenhayner,2018-12-21 Surveillance has become a part of everyday life: we are surrounded by surveillance technologies in news media, when we go down the street, in the movies, and even carry them in our own pockets in the form of smartphones. How are we constructing imaginaries of our realities and of ourselves as living in structures of control? What affects, emotions and feelings do we develop in societies of control, and how do we narrate them? Media, Surveillance and Affect represents a big step in revealing the depth of the entanglement of surveillance technology not only with our everyday lives, but with our imaginaries and affective

experiences. Combining insights from affect studies with narratological and visual cultural studies approaches, the case studies in this book focus on how surveillance cameras and surveillance camera images have been used to narrate affective stories of Great Britain. Cases discussed include the memory work surrounding the murder of James Bulger in 1993 and of Lee Rigby in 2011, but also novels and artworks. With a multidisciplinary approach Media, Surveillance and Affect will appeal to students, scholars and specialists interested in fields such as media and cultural studies, literary studies, cultural sociology and surveillance studies.
