Supporting Multilingual Learners in the Early Years Sandra Smidt,2007-11-21 Shortlisted for the Nasen Book that supports SEN and Disability Issues Award 2008 Are children who are exposed to more than one language from birth at an advantage or a disadvantage when starting school? Supporting Multilingual Learners in the Early Years examines the theoretical, ideological and practical issues involved in the education of children speaking two or more languages coming to settings which are predominantly monolingual. The book examines current research and thinking about the advantages and disadvantages of being multilingual and tackles complex topics such as: what being multilingual implies in terms of prior learning and why this matters in education the importance of respect for diversity and encouraging children to be proud of their language and culture practical ways to help young children acquire English ways of working with parents who themselves have little or no English the differences and difficulties involved in a child learning an additional language so early on in their lives strategies for exploring the learning of multilingual learners and a review of the resources and activities that could help. Sandra Smidt views multilingualism as a cognitive advantage and shows how Early Years practitioners can use interactive styles of learning to focus on the benefit that the many cultures and languages in the classroom can bring to children’s learning and development. Written in a highly accessible tone, this book offers practitioners a mix of practical case studies and examples in which theory is embedded and its importance explained. Students of early childhood education will also appreciate the author's carefully structured approach to the topic, as she includes summary boxes, glossaries and points for reflection in each chapter.

Anthropic Bias Nick Bostrom,2013-10-11 Anthropic Bias explores how to reason when you suspect that your evidence is biased by observation selection effects--that is, evidence that has been filtered by the precondition that there be some suitably positioned observer to have the evidence. This conundrum--sometimes alluded to as the anthropic principle, self-locating belief, or indexical information--turns out to be a surprisingly perplexing and intellectually stimulating challenge, one abounding with important implications for many areas in science and philosophy. There are the philosophical thought experiments and paradoxes: the Doomsday Argument; Sleeping Beauty; the Presumptuous Philosopher; Adam & Eve; the Absent-Minded Driver; the Shooting Room. And there are the applications in contemporary science: cosmology (How many universes are there?, Why does the universe appear fine-tuned for life?); evolutionary theory (How improbable was the evolution of intelligent life on our planet?); the problem of time's arrow (Can it be given a thermodynamic explanation?); quantum physics (How can the many-worlds theory be tested?); game-theory problems with imperfect recall (How to model them?); even traffic analysis (Why is the 'next lane' faster?). Anthropic Bias argues that the same principles are at work across all these domains. And it offers a synthesis: a mathematically explicit theory of observation selection effects that attempts to meet scientific needs while steering clear of philosophical paradox.
