Learning to Diagnose with Simulations Frank Fischer, Ansgar Opitz, 2022 This open access book presents 8 novel approaches to measure and improve diagnostic competences with simulation. The book compares the effects of interventions on these diagnostic competences in both teacher and medical education. It includes analyses showing that important aspects of diagnostic competences and effects of instructional interventions aiming to facilitate them are comparable for teachers and doctors. Through closely analyzing projects from medical education, mathematics education, biology education, and psychology, the reader is presented with multiple options for interventions that may be used in each of the subject areas and the improvements in diagnostic skills that could be expected from each simulation. The book concludes with an outline of promising future research on the use of simulations to facilitate professional competences in higher education in general, and for the advancement of diagnostic competencies in particular. This is an open access book.

Dissenting Diagnosis Arun Gadre, Abhay Shukla, 2016-04-22 Complaints about the state of medical care are increasing in today's India: whether it's unnecessary investigations, botched operations or expensive—sometimes even harmful—medication. But while the unease is widespread, few outside the profession understand the extent to which the medical system is being distorted. Dr Arun Gadre and Dr Abhay Shukla have gathered evidence from seventy-eight practising doctors, in both the private and public medical sectors, to expose the ways in which vulnerable patients are exploited by a system that promotes unscrupulous medical practices. At a time when the medical sector is growing rapidly, especially in urban areas, with the proliferation of multi-specialty hospitals and the adoption of ever-more sophisticated technologies, rational and ethical medical care is becoming increasingly rare. Honest doctors feel under siege, professional bodies meant to regulate the medical sector fail to do so, and the influence of the powerful pharmaceutical industry becomes even more pervasive. Drawing on the frank and courageous statements of these seventy-eight doctors dismayed at the state of their profession, *Dissenting Diagnosis* lays bare the corruption afflicting the medical sector in India and sets out solutions for a healthier future.

Immunocytochemistry in Diagnostic Cytology Pranab Dey, 2021-01-31 Cytology refers to a branch of pathology that deals with making diagnoses of diseases and conditions through the examination of tissue samples from the body (MedicineNet.com). Immunocytochemistry is a laboratory method that uses antibodies to check for certain antigens (markers) in a sample of cells. The antibodies are usually linked to an enzyme or a fluorescent dye. After the antibodies bind to the antigen in the cell sample, the enzyme or dye is activated, and the antigen can then be seen under a microscope. Immunocytochemistry is used to help diagnose diseases, such as cancer. It may also be used to help tell the difference between different types of cancer (National Cancer Institute). This book is a comprehensive guide to the techniques and application of immunocytochemistry in cytology. Divided into two parts, the first section discusses basic principles and preparation, techniques and quality control, and automated immune staining. Section Two covers diagnostic applications of immunocytochemistry for many

different types of tumour. The text is highly illustrated with microphotographs, tables and boxes to assist learning and interpretation of findings for accurate diagnosis. Key points Comprehensive guide to techniques and application of immunocytochemistry in cytology Provides thorough understanding of basic principles and methods Covers diagnostic applications for many different types of tumour Highly illustrated with microphotographs, tables and boxes

Instructional Design Principles for High-Stakes Problem-Solving Environments Chwee Beng Lee, José Hanham, Jimmie Leppink, 2018-11-29 This book examines the types of problems and constraints faced by specialists in the areas of security, medicine, mental health, aviation and engineering. Every day we rely on highly trained specialists to solve complex problems in high-stakes environments, that is, environments involving direct threats to the preservation of human life. While previous work has tended to focus on problem solving in a single domain, this book covers multiple, related domains. It is divided into three parts, the first of which addresses the theoretical foundations, with coverage of theories of instructional design and expertise. Part two covers the five high-stakes domains and offers directions for training in these domains. In turn, part three provides practical guidelines for instructional design in high-stakes professions, including learner analysis, task analysis, assessment and evaluation. The book is intended for a broad readership, including those who operate in high-stress, time-pressure occupations. Trainers at professional organisations can utilise the theoretical frameworks and training strategies discussed in this book when preparing their clients for complex, real-world problem solving. Further, the book offers a valuable resource for academics and graduate students, as well as anyone with an interest in problem solving.
