Gordon V. Cormack

Spam Wars Danny Goodman, 2004 Spammers, scammers, and hackers are destroying electronic mail. The email inbox that once excited you with messages from friends, family, and business prospects now causes outright dread and rage. With unsolicited and unwelcome email accounting for as much as 80% of the world's email traffic, it's time for all email users to act to turn the tide in this epic battle for their privacy and sanity. Spam Wars veteran and award-winning technology interpreter Danny Goodman exposes the often criminal tricks that spammers, scammers, and hackers play on the email system, even with the wariest of users. He also explains why the latest anti-spam technologies and laws can't do the whole job. Spam Wars provides the readers with the additional insight, not only to protect themselves from attack, but more importantly to help choke off the economies that power today's time-wasting email floods. Spam Wars puts to rest many popular misconceptions and myths about email, while giving readers the knowledge that email attackers don't want you to have. Danny Goodman's crystal-clear writing can turn any email user into a well-armed spam warrior.

Email Spam Filtering Gordon V. Cormack, 2008 Email Spam Filtering: A Systematic Review surveys current and proposed spam filtering techniques with particular emphasis on how well they work. The primary focus is on spam filtering in email, while similarities and differences with spam filtering in other communication and storage media - such as instant messaging and the Web - are addressed peripherally. Email Spam Filtering: A Systematic Review examines the definition of spam, the user's information requirements and the role of the spam filter as one component of a large and complex information universe. Well known methods are detailed sufficiently to make the exposition self-contained; however, the focus is on considerations unique to spam. Comparisons, wherever possible, use common evaluation measures and control for differences in experimental setup. Such comparisons are not easy, as benchmarks, measures and methods for evaluating spam filters are still evolving. The author surveys these efforts, their results and their limitations. In spite of recent advances in evaluation methodology, many uncertainties (including widely held but unsubstantiated beliefs) remain as to the effectiveness of spam filtering techniques and as to the validity of spam filter evaluation methods. Email Spam Filtering: A Systematic Review outlines several uncertainties and proposes experimental methods to address them. Email Spam Filtering: A Systematic Review is a highly recommended read for anyone conducting research in the area or charged with controlling spam in a corporate environment.

The Concept Of Spam In Email Communication Alena Rudnitskaya, 2009-08-17 Seminar paper from the year 2006 in the subject English Language and Literature Studies - Linguistics, grade: keine, LMU Munich (Department für Anglistik und Amerikanistik), course: Internet Communication, language: English, abstract: The communication by email has become one of the most important means of communication in cooperate and private. An internet user is constantly confronted by mass emails containing undesired information. Spam, defined as bulk unsolicited emailing, generally commercial in nature, and predominately fraudulent. Spam causes high charges and damages. Nucleus Research announced that the spam epidemic is costing US businesses \$712 per employee each year in lost worker productivity. As a result, users are spending 16 seconds identifying and deleting each spam e-mail, which translates into an annual cost of \$70 bln to all US businesses. Looking at the total e-mail traffic, Nucleus estimates that at least 90% of e-mail reaching corporate servers is spam. The average user receives 21 spam messages to their inbox each day. (Moskalyuk 2007) Regardless of the inefficient time spent, there are further costs caused by spam, such as (cf Filterpoint 2008):
· Deleted emails remain stored in the trash folder.
· Higher storage costs through higher server expenses.
· Higher bandwidth essential to store the spam mails.
· Time spent by IT staff for anti-spam measures.
· Recovery costs after a virus attack. Various experts provide a spam calculator that enables to determine the approximate annual costs for an enterprise created by spam. (Gibbs 2003, Commtouch 2007) The calculator introduced by Gibbs differentiates productivity, connectivity, storage and support costs. This Spam Cost Analysis Model can be found in appendix 1 of this work. In this work different types of spam in general and in specific will be pointed out and characterized. Measures against unsolicited emails will be reviewed. First I start with the definition of spam and where it comes from, followed with the spam history. Then I briefly list the most common categories and variants of spam used. The next step will be the revision of a present situation captured by Commtouch and Symantec, as well as statistics on the information learned through spam monitoring during the last few months, with the examples of its usage. I conclude with an overview of spam solutions offered and point out further research topics in the area.
