Minerals, Metals and Sustainability WJ Rankin,2011-09-14 Minerals, Metals and Sustainability examines the exploitation of minerals and mineral products and the implications for sustainability of the consumption of finite mineral resources and the wastes associated with their production and use. It provides a multi-disciplinary approach that integrates the physical and earth sciences with the social sciences, ecology and economics. Increasingly, graduates in the minerals industry and related sectors will not only require a deep technical and scientific understanding of their fields (such as geology, mining, metallurgy), but will also need a knowledge of how their industry relates to and can contribute to the transition to sustainability. Minerals, Metals and Sustainability is an important reference for students of engineering and applied science and geology; practising engineers, geologists and scientists; students of economics, social sciences and related disciplines; professionals in government service in areas such as resources, environment and sustainability; and non-technical professionals working in the minerals industry or in sectors servicing the minerals industry.

The World Copper Market G. Wagenhals,2012-12-06 1.1 The Importance of Copper Copper, the red metal, has been known in history for thousands of years. It may have been mankind's first metal (Joralemon= 1973). And still,

probabl~ more than one hundred decades after native copper was used for the first time (Muhl~ (1973: 171», toda~, copper is a ver~ important commodit~: 1. Onl~ aluminum (first in 1963) surpasses refined copper in terms of the total 1 world's mine production and consumption. It outpaces zinc, lead, nickel and tin • 2. Refined copper is one of the most important export products of the developing countries. In 1975, refined copper ranked 8th in the developing countries' export values in general, it was 6th among their non-fuel exports, and their most important export 2 commodit~ among the non-ferrous metals • 3. Man~ small and medium sized industrialized countries depend heavil~ on copper imports. For example, West German~'s share in world mine production has alwa~s been smaller than 0.1 per cent. In the last few decades, however, the Federal Republic's consumption share has amounted to some 8 i. in 1982. 4. Copper is of utmost importance for the export earnings of several countries.

Explaining Metals Prices Paul W. Macavoy, 2012-12-06 Work on this book began in the Spring of 1983, not long after an Amax Corporation annual budget meeting. As a member of the Amax board of directors since 1979, I had been present at such meetings in which the molybdenum price had been forecast to move higher than \$7.00 per pound. The actual annual average prices were \$9.70 in 1980, \$8.50 in 1981, and \$4.00 in 1982. The forecast for 1983 called for prices to return to higher levels, but as both dealer and producer prices declined further, my research began in earnest. Initially, the research was to address the question of why the molybdenum price had declined by more than half in a short period. More fundamental, as other metals prices also declined, was an impelling need to know the causes of the abrupt and sustained reduction in metals price levels that year. As prices stayed at low levels, while those of other materials recovered over the 1983-1986 period, the question became that of why metals prices had remained at startlingly low levels for over five years.
