Global Mobile Satellite Communications Applications

Stojce Dimov Ilcev,2017-11-11 This book discusses global mobile satellite communications (GMSC) for maritime, land (road and rail), and aeronautical applications. It covers how these enable connections between moving objects such as ships, road and rail vehicles and aircrafts on one hand, and ground telecommunications subscribers through the medium of communications satellites, ground earth stations, Terrestrial Telecommunication Networks (TTN), Internet Service Providers (ISP) and other wireless and landline telecommunications providers. The new edition covers new developments and initiatives that have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits and projects of new hybrid satellite constellations. The book presents current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphics, illustrations and mathematics equations. It represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones. The first edition of Global Mobile Satellite Communications (Springer, 2005) was split into two books for the second edition - one on applications and one on theory. This book presents global mobile satellite communications applications.

**Global Satellite Meteorological Observation
(GSMO) Applications** Stojče Dimov Ilčev,2018-12-05 This
book presents principal structures of space systems
functionality of meteorological networks, media and
applications for modern remote sensing, transmission
systems, meteorological ground and users segments and
transferring weather data from satellite to the ground
infrastructures and users. The author presents techniques
and different modes of satellite image interpretation, type
of satellite imagery, spectral imaging properties, and
enhancement of imaging technique, geo-location and
calibration, atmospheric and surface phenomena. Several
satellite meteorological applications are introduced
including common satellite remote sensing applications,
weather analysis, warnings and prediction, observation and
measurements of meteorological variables, atmosphere
and surface applications, ocean and coastal applications,
land, agriculture and forestry applications, and maritime
and aviation satellite weather applications. The author also

covers ground segment and user segment in detail. The final chapter looks to the future, covering possible space integrations in meteorological and weather observation. This is a companion book of *Global Satellite Meteorological Observation Theory* (Springer), which provides the following topics: Evolution of meteorological observations and history satellite meteorology Space segment with satellite orbits and meteorological payloads Analog and digital transmission, type of modulations and broadcasting systems Atmospheric radiation, satellite meteorological parameters and instruments Meteorological antenna systems and propagation

Air Crash Investigation: The Crash of Air France Flight 358 Hans Griffioen,2009-07-09 On August 2, 2005 Air France Flight 358, an Airbus A340, departed Paris, on a flight to Toronto, Canada, with 297 passengers and 12 crew members on board. On final approach, the aircraft's weather radar was displaying heavy precipitation encroaching on the runway from the northwest. The aircraft touched down 3800 feet down the runway, and was not able to stop before the end of it. The aircraft stopped in a ravine and caught fire. All passengers and crew members were able to evacuate the aircraft on time. Only 2 crew members and 10 passengers were seriously injured during the crash and the evacuation.

Global Mobile Satellite Communications Stojce Dimov Ilcev,2005-12-05 Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial

application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.
