

Meteodroid

Charles C. Dalton

Lunar Meteoroid Impacts and How to Observe Them Brian Cudnik, 2010-03-10 The genesis of modern searches for observable meteoritic phenomena on the Moon is the paper by Lincoln La Paz in Popular Astronomy magazine in 1938. In it he argued that the absence of observed flashes of meteoritic impacts on the Moon might be interpreted to mean that these bodies are destroyed as luminous meteors in an extremely rarefied lunar atmosphere. The paper suggested the possibility of systematic searches for such possible lunar meteors. With these concepts in mind, I was surprised to note a transient moving bright speck on the Moon on July 10, 1941. It appeared to behave very much as a lunar meteor would – except that the poorly estimated duration would lead to a strongly hyperbolic heliocentric velocity. Thus, the idea of systematic searches for both possible lunar meteors and meteoritic impact flashes was born. It was appreciated that much time might need to be expended to achieve any positive results. Systematic searches were carried out by others and myself chiefly in the years 1945–1965 and became a regular program at the newly founded Association of Lunar and Planetary Observers, or ALPO.

Meteoroid Hazard to Space Vehicles in Orbit Near the Earth Charles C. Dalton, 1962

Meteoroid Effects on Space Exploration Maurice Dubin, 1963

Environmental Problems of Space Flight Structures John R. Davidson, 1963 The meteoroid environment and the effects of hypervelocity impact on a space vehicles are described, and the effects of the incompleteness of present knowledge of each are discussed. The overall problem of the meteoroid hazard is evaluated and methods of eliminating the probability of meteoroid damage are given. A partial listing of typical research projects on meteoroid-environment and hypervelocity-impact problems is presented.

Evolutionary and Physical Properties of Meteoroids Curtis L. Hemenway, Peter MacKenzie Millman, Allan F. Cook, 1973 Astrophysical models for meteoroid formation and stellar and planetary evolutions are developed from simulation composition studies.

The Near-earth Meteoroid Environment Robert J. Naumann, 1966

Determination of Meteoroid Environments from Photographic Meteor Data

Charles C. Dalton, 1969 A mathematical model is used to represent 8pik's 1958 physical theory of meteors in a form convenient for programming the computation of meteoroid photometric mass values. Sub-samples of 333

photographic meteors from McCrosky and Posen's sample are selected with respect to magnitude scaled for minimum velocity. A statistical comparison between the 1958 8pik result and the 1933 8pik provisional result, the Harvard-Meteor project basis for mass values, relative flux in absolute units for mass, momentum and energy are given separately for the terrestrial influx and for the lunar and interplanetary vehicle onfluxes.

Spray Ejected from the Lunar Surface by Meteoroid Impact Donald E. Gault, Eugene M. Shoemaker, Henry J. Moore, 1963

Theoretical Relationships for Meteoroid Puncture Experiments Charles C. Dalton, 1966

The Lunar Orbiter Meteoroid Experiments Gary W. Grew, 1971 Meteoroid experiments by five Lunar Orbiters have provided a direct measurement in the near-lunar environment of the rate of meteoroid penetration of 0.025-mm-thick beryllium-copper. Each experiment used 20 pressurized-cell detectors having a total effective exposed area of 0.186 m². The spacecraft carrying the cells were in both equatorial and polar orbits; altitudes ranged between 30 and 6200 km. Data collected continuously for 17 months indicate that the rate of penetration in the lunar environment is approximately half the rate in the near-earth environment as measured by detectors of the same type aboard Explorers XVI and XXIII.

Estimation of Tolerance Limits for Meteoroid Hazard to Space Vehicles 100-500 Kilometers Above the Surface of the Earth Charles C. Dalton, 1964

Mathematical Modelling of Meteoroid Streams Galina O. Ryabova, 2020-08-12 Modern computer power and high-precision observational data have greatly improved the reliability of meteoroid stream models. At present, scientific research calls for two kinds of models: precise ones for individual streams, and statistically averaged ones for Solar System dust distribution models. Thus, there is a wide field of study open to stream modellers. This brief describes step-by-step computer simulations of meteoroid stream formation and evolution. Detailed derivations of relevant formulae are given, along with plenty of helpful, digestible figures explaining the subtleties of the method. Each theoretical section ends with examples aimed to help readers practice and master the material. Most of the examples are based on the Geminid meteoroid stream model, which has been developed by the author in the last 30 years. The book is intended for researchers interested in meteor astronomy and mathematical modelling, and it is also accessible to physics and astrophysics students.

The Synthesis of Meteoroid Distributions from Monoenergetic Monodirectional Kernels, 1965

Survey of Meteoroid Property and Distribution Data Relevant to SNAP 8 Reactor and Shield Design C. R. Harder, 1963

Modern Meteor Science Robert Hawkes, Ingrid Mann, Peter Brown, 2006-08-18 This volume contains leading edge research and authoritative reviews in meteor science. It provides a comprehensive view of meteoroid research including the dynamics, sources and distribution of these bodies. Techniques for investigation of meteor phenomena in the book include conventional and large aperture radar systems, spacecraft detection, optical systems, spectral measurements, and laboratory based interplanetary dust particle studies.
