Analysis and Strategies for Sustainable Regional Planning Juanjo Galan, 2018-09-26 The book presents a unique example of integral planning at different scales and across different types of landscapes found on the outskirts of metropolitan areas. It features a sustainability-based plan to improve the evolution of the south-central area of the Calderona Mountain Range, Spain (Sierra Calderona). It is informed and driven by social, cultural, perceptual, sustainability and economic factors supported by a participative process. The plan addresses the frequent conflict between the management of natural and cultural values found in peri-urban areas and the strong pressure for transformation and public use. Incorporating new methodologies and graphical systems for regional and local planning, the plan provides a practical example of balanced and multidisciplinary planning, based on principles of sustainability, systems thinking, new governance and local adaptation. This is volume one of a two-volume series. It elaborates on regional analysis and diagnosis, and on the definition of strategies for the following themes: natural environment, agriculture and livestock farming, urban environment and wellbeing, infrastructures and mobility, cultural heritage, tourism and public use, landscape, sustainability, socio-demography, economic development and governance. The book is intended for planners and researchers from various disciplines, including urban planning, forestry, agriculture, cultural and touristic management, and sustainability studies.

Urban Transport XXI C.A. Brebbia,J.L. Miralles i Garcia,V. de Esteban Chapapria,2015-06-02 Urban Transport XXI contains the proceedings of the 21st International Conference on Urban Transport and the Environment. The series of annual conferences organised by the Wessex Institute was first held in 1995. Transportation in urban areas, with its related environmental and social impacts, is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems. Urban transport systems require considerable studies to devise and then safeguard their operational use, maintenance and safety. Transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres. Clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute concern, with financial, political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public. Papers cover such topics as: Urban Transport Planning and Management; Urban Transport Strategies; Public Transport Systems; Environmental Aspects; Economic and Social Impact; Safety and Security; Travel Behaviour Studies; Customer Satisfaction; Transportation Modelling and Simulation; Infrastructure Development; Intelligent and Advanced Transport Systems; Transportation Integration; City Logistics; Resilience and Inter-modal Transport Systems; Mass Transport Strategies; Social Impacts; Freight Transport; Railway Systems; Transport Governance and Administration; Port and City; Mobility and Public Space; Life Cycle Management.
