Wolfgang Guggemos

Image Control Patrick Nathan, 2022-08-09 Susan Sontag meets Hanif Abdurraqib in this fascinating exploration of the unexpected connections between how we consume images and the insidious nature of Fascism. Images come at us quickly, often without context. A photograph of Syrian children suffering in the wake of a chemical attack segues into a stranger's pristine Instagram selfie. Before we can react to either, a new meme induces a laugh and a share. While such constant give and take might seem innocent, even entertaining, this barrage of content numbs our ability to examine critically how the world, broken down into images, affects us. Images without context isolate us, turning everything we experience into mere transactions. It is exactly this alienation that leaves us vulnerable to fascism—a reactionary politics that is destroying not only our lives and our nations, but also the planet's very ability to sustain human civilization. Who gets to control the media we consume? Can we intervene, or at least mitigate the influence of constant content? Mixing personal anecdotes with historical and political criticism, *Image Control* explores art, social media, photography, and other visual mediums to understand how our culture and our actions are manipulated, all the while building toward the idea that if fascism emerges as aesthetics, then so too can anti-fascism. Learning how to ethically engage with the world around us is the first line of defense we have against the forces threatening to tear that world apart.

Cultural Analytics Lev Manovich, 2020-10-20 A book at the intersection of data science and media studies, presenting concepts and methods for computational analysis of cultural data. How can we see a billion images? What analytical methods can we bring to bear on the astonishing scale of digital culture--the billions of photographs shared on social media every day, the hundreds of millions of songs created by twenty million musicians on Soundcloud, the content of four billion Pinterest boards? In *Cultural Analytics*, Lev Manovich presents concepts and methods for computational analysis of cultural data. Drawing on more than a decade of research and projects from his own lab, Manovich offers a gentle, nontechnical introduction to the core ideas of data analytics and discusses the ways that our society uses data and algorithms.
