Wills Eye Institute - Oculoplastics Robert B. Penne, 2012-01-05 This text is part of the Color Atlas and Synopsis of Clinical Ophthalmology which was developed at Philadelphia's famed Wills Eye Institute. The beauty of this series is the powerful combination of illustrative photographs and a summary approach to the text. While the seven ophthalmic subspecialties in this series, Cornea, Retina, Glaucoma, Oculoplastics, Neuroophthalmology, Pediatrics, and Uveiti, employ varying levels of visual recognition, a relatively standard format for the text is used for all volumes. The goal of the series is to provide an up-to-date clinical overview of the major areas of ophthalmology for students, residents, and practitioners in all the healthcare professions. Oculoplastics, Second Edition, presents unmistakable guidelines for the differential diagnosis and treatment of the full range of oculoplastic conditions. This book is a unique combination of text, quick reference, and color atlas, with over 250 full color illustrations throughout. A short, succinct format includes: Epidemiology and Etiology, History, Physical Examination, Differential Diagnosis, Laboratory and Special Examinations, Diagnosis, Prognosis, and Management.

Eye Pathology Ralph C. Eagle, 2011 *Eye Pathology: An Atlas and Text* is a basic introduction to eye pathology that can be read and mastered during an ophthalmic pathology rotation. In addition, it

will serve as a well-illustrated resource for residents who are studying for the OKAP examinations or Board certification in ophthalmology. Pseudophakic Monovision Fuxiang Zhang, Alan Sugar, Graham D. Barrett, 2019-01-23 A state-of-the-art resource on successful management of intraocular lens monovision Pseudophakic Monovision: A Clinical Guide by renowned ophthalmologic surgery experts Fuxiang Zhang, Alan Sugar, and Graham Barrett reflects decades of robust academic research, with comprehensive discussion of the pseudophakic lens. Pseudophakic monovision is frequently used as a strategy for presbyopia correction in cataract surgery patients, with high satisfaction rates. The authors address the advantages and drawbacks to this approach, with topics ranging from the optics and neurophysiology of monovision to preoperative vision testing and counseling. The book fills a gap in the literature on this essential yet relatively neglected topic. In the current era of an ever-expanding array of intraocular lenses inserted in cataract surgery, monovision correction is emerging as an efficacious, far less expensive method for managing presbyopia than multifocal lenses. One eye is corrected for optimal distance vision and the other for optimal near vision, thereby avoiding both the expense of multifocal lenses and inconvenience of wearing glasses and/or contact lenses. Emerging adjustable IOLs address eye dominance issues, enabling patients to attain excellent distance acuity in one eye, then select the amount of myopia that works best in the second eye. Key Features Guidelines on basic calculations, optics, and techniques Various practical considerations, such as patient selection, incorporating IOL monovision into practice, essential preoperative tests, nighttime driving, and limitations Optics, neurophysiology, and graphic illustrations enhance understanding of

the basics of IOL monovision including mini, moderate, and full monovision, as well as the concept of the not-sharply focused-zone Ocular as well as systemic contraindications, and how to use extra tests to detect subtle contr

Wills Eye Institute - Pediatric Ophthalmology Leonard B. Nelson, 2012-01-05 This text is part of the Color Atlas and Synopsis of Clinical Ophthalmology which was developed at Philadelphia's famed Wills Eye Institute. The beauty of this series is the powerful combination of illustrative photographs and a summary approach to the text. While the seven ophthalmic subspecialties in this series, Cornea, Retina, Glaucoma, Oculoplastics, Neuroophthalmology, Pediatrics, and Uveiti, employ varying levels of visual recognition, a relatively standard format for the text is used for all volumes. The goal of the series is to provide an up-to-date clinical overview of the major areas of ophthalmology for students, residents, and practitioners in all the healthcare professions. Pediatric Ophthalmology was written in an effort to provide practicing ophthalmologists, pediatric ophthalmologists, and residents in training with a concise update of the clinical findings and the most recent treatment available for a wide spectrum of childhood ocular diseases. The atlas format should provide readers with a clear and succinct outline of the disease entities and stimulate a more detailed pursuit of the specific ocular disorders. The book features more than 150 4-color illustrations throughout and a short, succinct format which includes: Epidemiology and Etiology, History, Physical Examination, Differential Diagnosis, Laboratory and Special Examinations, Diagnosis, Prognosis, and Management.
