Minimal Art Daniel Marzona, 2004 The bare minimum Often regarded as a backlash against abstract expressionism, Minimalism was characterized by simplified, stripped-down forms and materials used to express ideas in a direct and impersonal manner. By presenting artworks as simple objects, minimalist artists sought to communicate esthetic ideals without reference to expressive or historical themes. This critical movement, which began in the 1960s and branched out into land art, performance art, and conceptual art, is still a major influence today. This book explains the how, why, where and when of Minimal Art, and the artists who helped define it. Featured artists: Carl Andre, Stephen Antonakos, Jo Baer, Larry Bell, Ronald Bladen, Walter De Maria, Dan Flavin, Robert Grosvenor, Eva Hesse, Donald Judd, Gary Kuehn, Sol LeWitt, Robert Mangold, John McCracken, Robert Morris, Robert Ryman, Fred Sandback, Richard Serra, Tony Smith, Frank Stella, Robert Smithson, Anne Truitt About the Series: Each book in TASCHEN's Basic Genre Series features: a detailed illustrated introduction plus a timeline of the most important political, cultural and social events that took place during that period a selection of the most important works of the epoch, each of which is presented on a 2-page spread with a full-page image and with an interpretation of the respective work, plus a portrait and brief biography of the artist approximately 100 colour illustrations with explanatory captions

Nominalism about Properties Ghislain Guigon, Gonzalo Rodriguez-Pereyra, 2015-02-11 Nominalism, which has its origins in the Middle Ages and continues into the Twenty-First Century, is the doctrine that there are no universals. This book is unique in

bringing together essays on the history of nominalism and essays that present a systematic discussion of nominalism. It introduces the reader to the distinction between particulars and universals, to the difficulties posed by this distinction, and to the main motivations for the rejection of universals. It also describes the main varieties of nominalism about properties and provides tools to understand how they developed in the history of Western Philosophy. All essays are new and are written by experts on the topic, and they advance the discussion about nominalism to a new level.

Blue in Old English C.P. Biggam,2022-06-08 Blue in Old English represents the first thorough investigation of an area of the colour semantics of Old English, and the methodology developed for this study is believed to be appropriate for researching the colour semantics of any language which survives only in recorded texts. By means of a collection of in-depth word-studies, which suggest new interpretations of many well-known passages, an understanding of how blueness was described in Old English is developed. The approach is interdisciplinary, using evidence from subjects such as botany, manuscript illustration, etymology, early technologies, and others. The conclusion contradicts certain previously held views on Old English colour, and presents a hitherto obscured sociolinguistic picture of differing language use among various groups of Old English speakers.

The New Southern Garden Cookbook Sheri Castle, 2011-04-30
In *The New Southern Garden Cookbook*, Sheri Castle aims to make what's in season the answer to what's for dinner? This timely cookbook, with dishes for omnivores and vegetarians alike, celebrates and promotes delicious, healthful homemade meals centered on the diverse array of seasonal fruits and vegetables grown in the South, and in most of the rest of the nation as well. Increased attention to the health benefits and environmental advantages of eating locally, Castle notes, is inspiring Americans

to partake of the garden by raising their own kitchen plots, visiting area farmers' markets and pick-your-own farms, and signing up for CSA (Community Supported Agriculture) boxes from local growers. The New Southern Garden Cookbook offers over 300 brightly flavored recipes that will inspire beginning and experienced cooks, southern or otherwise, to take advantage of seasonal delights. Castle has organized the cookbook alphabetically by type of vegetable or fruit, building on the premise that when cooking with fresh produce, the ingredient, not the recipe, is the wiser starting point. While some dishes are inspired by traditional southern recipes, many reveal the goodness of gardens in new, contemporary ways. Peppered with tips, hints, and great stories, these pages make for good food and a good read.

Groundwater Exploitation in the High Plains David E. Kromm, Stephen E. White, 1992 In the forty years since the invention of center pivot irrigation, the High Plains aquifer system has been depleted at an astonishing rate. Is the region now in danger of becoming the Great American Desert? In this volume eleven of the most knowledgeable scholars and water professionals in the Great Plains insightfully examine the dilemmas of groundwater use. They address both the technical problems and the politics of water management, providing a badly needed analysis of the implications of large-scale irrigation.

High Performance Computing in Science and Engineering '09 Wolfgang E. Nagel, 2010-04-28 At the end of the year 2008, we have seen a strategic step towards a functioning HPC infrastructure on Tier-0 level in Germany. Based on an agreement (Verwaltungsabkommen) between the Federal Ministry of Education and Research (BMBF) and the state ministries for research of Baden-Württemberg, Bayern, and Nordrhein-Westfalen, a budget of overall 400 Million Euro had been allocated - equally shared between federal and state authorities in a five year time frame - to establish the next

generation of HPC systems at the Gauss Centre for Supercomputing (GCS) - consisting of the three national supercomputing centres HLRS (Stuttgart), NIC/JSC (Jülich), and LRZ (Munich). As part of that strategic initiative, in May 2009 already NIC/JSC has installed the first phase of the GCS HPC Tier-0 resources, an IBM Blue Gene/P with roughly 300.000 Cores, this time in Jülich. With that, the GCS provides the most powerful high-performance computing infrastructure in Europe already today. HLRS and its partners in the GCS have agreed on a common strategy for the installation of the next generation of leading edge HPC systems. Over the next few years, HLRS and LRZ as the other two GCS centers will upgrade their systems accordingly. The plan is to have a Tier-0 HPC system within GCS operating at any time in this year period.

As an intermediate step,

HLRS has replaced most of their NEC SX-8 nodes by the NEC

SX-9/12M192, a system with roughly 20 TFLOPs peak
