Geology and Geochemistry of Molybdenum Deposits in the Qinling Orogen, P R China YanJing Chen,Franco Pirajno,Nuo Li,XiaoHua Deng,YongFei Yang,2022-01-01 This book is the first systematic treatise of available data and view-points obtained from geological and geochemical studies of the Mo deposits in Qinling Orogen, China. Qinling Orogen has a minimum reserve of 8.7 Mt Mo, ranking the largest molybdenum province both in China and the world. Incorporating all known Mo deposit types in the world, it presents extensive studies of Mo deposits of world-class and unusual types within tectonic settings. The Qinling Orogen was finally formed during continental collision between Yangtze and North China cratons, following the Triassic closure of the northernmost paleo-Tethys. It hosts 49 Mo deposits formed in seven mineralization events since 1850 Ma, with all the world-class deposits being formed during 160-105 Ma, coeval with collisional orogeny. These deposits are assigned to magmatic and metamorphic hydrothermal classes. The magmatic hydrothermal class includes porphyries, skarns, and intrusion-related veins (carbonatite, fluorite and quartz). The porphyry Mo systems in Qinling Orogen are predominated by Dabie-type formed in continental collision setting, followed by Endako- and Climax-types formed in continental arcs and rifts, respectively. The metamorphic hydrothermal Mo deposits are only reported in Qinling Orogen, and thus a new crustal continuum model for the orogenic class mineral systems is proposed. A scientific linkage between ore geology and fluid inclusions is introduced and verified both by theory and case studies. This is the first research book comprehensively displaying continental collision metallogeny. This literature will benefit both Western and Chinese mineral explorers and miners, as well as research scientists and students.

*Review of the Eustrophinae (Coleoptera, Tetratomidae) of America north of Mexico* Darren A. Pollock,2012-05-02 Based on examination of more than 6,600 adult specimens, this work treats the Nearctic fauna of Eustrophinae (Tetratomidae), a relatively obscure, but potentially ecologically significant, group of beetles associated with wood-rotting fungi in most forest ecosystems. Five genera and 12 species are recognized: Pseudoholostrophus (Pseudoholostrophus) impressicollis (LeConte), P. (Holostrophinus) discolor (Horn), Holostrophus bifasciatus (Say), Eustrophus tomentosus Say, Eustrophopsis confinis (LeConte), E. bicolor (Fabricius), E. brunneimarginatus (Dury), E. indistinctus (LeConte), E. arizonensis (Horn), E. ornatus (Van Dyke), and Synstrophus repandus (Horn). A new species, Eustrophopsis crowdyi is described from southern Arizona. An identification key, supplemented with color photographs of the body (dorsal and lateral), frontal view of head, prosternal process and other structural features, is presented. Distribution maps of known geographical ranges in Canada and the United States (and Mexico for three southern species) are included, supplemented by detailed locality data. In addition to the taxonomic analyses, preliminary comments are made on the biogeography of the Nearctic Eustrophinae, as well as their natural history and ecological importance in forest habitats.

**United States Code** United States,2013 The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited U.S.C. 2012 ed. As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office--Preface.
