Minimalism Hartmut Obendorf,2009-06-12 The notion of Minimalism is proposed as a theoretical tool supporting a more differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity. Possible uses of the notion of minimalism in the field of human-computer interaction design are examined both from a theoretical and empirical viewpoint, giving a range of results. Minimalism defines a radical and potentially useful perspective for design analysis. The empirical examples show that it has also proven to be a useful tool for generating and modifying concrete design techniques. Divided into four parts this book traces the development of minimalism, defines the four types of minimalism in interaction design, looks at how to apply it and finishes with some conclusions.

The Reading for Real Handbook Martin Coles,Colin Harrison,2002-08-27 The Reading for Real Handbook was very well received by both teachers and literacy specialists when it was published in 1992. Since its first publication there have been significant changes in the field of 'reading', not least of which has been governmental demands for higher standards in reading and the resultant National Literacy Strategy (NLS). As well as providing invaluable help for teachers struggling with the National Literacy Strategy and the Literacy Hour, several other new topics of interest are also addressed, including teaching fiction/non-fiction inside and outside the Literacy Hour, integrating reading, writing and spelling work, involving parents, assessment and working with slower readers.

Reading and Writing Public Documents Daniël Janssen,Rob Neutelings,2001-01-01 Annotation Government documents--forms, brochures, letters, and policy papers--that are difficult to understand create problems both for the public they're intended to help and for government agencies. In this collection, researchers from five universities in the Netherlands survey recurring problems in government documents and offer possible solutions. The contributors are linguists, document designers, and other communication experts who have studied public documents both empirically and from a design point of view. Though the subject is Dutch documents, the text is in English, and the work may be of interest to those investigating government communication in other nations as well as those who produce similar documents in the private sector. Arabic Minimalist Story Ibrāhīm Ṭāhā,2009 This unique study aims at characterizing the Arabic minimalist story as a new genre of narrative fiction that exploits many austere devices of post-modern strategies to exhibit a variety of socio-political and ideological matters that affect the fundamental needs of the common people in all Arab states. One of the major aims of this study is to expose the reader to the particularity of the Arabic minimalist story on both levels, thematic and aesthetic. On the thematic level, political, national and citizenship questions are at the top of the genre's agenda. Other topics, such as feminism and economic conditions, also attract significant interest among minimalist writers in all Arab countries. However, Arab minimalist writers are mostly preoccupied by national and political issues related to their quest for freedom, free speech, and proper interrelations between common people and rulers. In reading Arabic minimalist fiction, we come to recognize that the political crisis in Arab states has been among the uppermost concerns of Arab minimalist writers for the last three decades. On the aesthetic/poetic level, Arabic minimalist story is mostly applied to identify texts that are pared down to their most essential features and fundamental components. One of the departure points of the minimalist story in modern Arabic fiction is 'blurring transparency', which challenges the reader and his ability to go beyond the surface, namely to cross the verbal text to unseen texts. Since the minimalist story goes immediately to the point of the text, implicitly or explicitly, it generates a deep sense of powerful product. This is apparently the very reason why the minimalist story is particularly apt for devices that forcefully move the reader, such as satire, sarcasm, the absurd, irony, the grotesque, caricature, paradox, and the like. Unlike long genres of narrative fiction, which narrate a piece of reality or history, the minimalist story touches directly the core of the experience that the writer wishes to portray. Unlike long narrative genres, of well-explained events and detailed descriptions, the unique powerful effect of the minimalist story stems from its concentrated, focal and sudden presentation. Fighting and resistance are well suited to the minimalist story, which does not scatter the reader's attention to side issues. The immediacy and shortness of minimalist fiction are apparently the very features needed to reach the extreme of challenge and resistance.

Minimal Surfaces Ulrich Dierkes,Stefan Hildebrandt,Friedrich Sauvigny,2010-08-16 Minimal Surfaces is the first volume of a three volume treatise on minimal surfaces (Grundlehren Nr. 339-341). Each volume can be read and studied independently of the others. The central theme is boundary value problems for minimal surfaces. The treatise is a substantially revised and extended version of the monograph Minimal Surfaces I, II (Grundlehren Nr. 295 & 296). The first volume begins with an exposition of basic ideas of the theory of surfaces in three-dimensional Euclidean space, followed by an introduction of minimal surfaces as stationary points of area, or equivalently, as surfaces of zero mean curvature. The final definition of a minimal surface is that of a nonconstant harmonic mapping $X: \Omega \rightarrow \mathbb{R}^3$ which is conformally parametrized on $\Omega \subset \mathbb{R}^2$ and may have branch points. Thereafter the classical theory of minimal surfaces is surveyed, comprising many examples, a treatment of Björling's initial value problem, reflection principles, a formula of the second variation of area, the theorems of Bernstein, Heinz, Osserman, and Fujimoto. The second part of this volume begins with a survey of Plateau's problem and of some of its modifications. One of the main features is a new, completely elementary proof of the fact that area A and Dirichlet integral D have the same infimum in the class $C(G)$ of admissible surfaces spanning a prescribed contour G . This leads to a new, simplified solution of the simultaneous problem of minimizing A and D in $C(G)$, as well as to new proofs of the mapping theorems of Riemann and Korn-Lichtenstein, and to a new solution of the simultaneous Douglas problem for A and D where G consists of several closed components. Then basic facts of stable minimal surfaces are derived; this is done in the context of stable H -surfaces (i.e. of stable surfaces of prescribed mean curvature H), especially of cmc-surfaces ($H = \text{const}$), and leads to curvature estimates for stable, immersed cmc-surfaces and to Nitsche's uniqueness theorem and Tomi's finiteness result. In addition, a theory of unstable solutions of Plateau's problems is developed which is based on Courant's mountain pass lemma. Furthermore, Dirichlet's problem for nonparametric H -surfaces is solved, using the solution of Plateau's problem for H -surfaces and the pertinent estimates.

Minimal Surfaces, Stratified Multivarifolds, and the Plateau Problem A. T. Fomenko,1991-02-21 Plateau's problem is a scientific trend in modern mathematics that unites several different problems connected with the study of minimal surfaces. In its simplest version, Plateau's problem is concerned with finding a surface of least area that spans a given fixed one-dimensional contour in three-dimensional space--perhaps the best-known example of such surfaces is provided by soap films. From the mathematical point of view, such films are described as solutions of a second-order partial differential equation, so their behavior is quite complicated and has still not been thoroughly studied. Soap films, or, more generally, interfaces between physical media in equilibrium, arise in many applied problems in chemistry, physics, and also in nature. In applications, one finds not only two-dimensional but also multidimensional minimal surfaces that span fixed closed "contours" in some multidimensional Riemannian space. An exact mathematical statement of the problem of finding a surface of least area or volume requires the formulation of definitions of such fundamental concepts as a surface, its boundary, minimality of a surface, and so on. It turns out that there are several natural definitions of these concepts, which permit the study of minimal surfaces by different, and complementary, methods. In the framework of this comparatively small book it would be almost impossible to cover all aspects of the modern problem of Plateau, to which a vast literature has been devoted. However, this book makes a unique contribution to this literature, for the authors' guiding principle was to present the material with a maximum of clarity and a minimum of formalization. Chapter 1 contains historical background on Plateau's problem, referring to the period preceding the 1930s, and a description of its connections with the natural sciences. This part is intended for a very wide circle of readers and is accessible, for example, to first-year graduate students. The next part of the book, comprising Chapters 2-5, gives a fairly complete survey of various modern trends in Plateau's problem. This section is accessible to second- and third-year students specializing in physics and mathematics. The remaining chapters present a detailed exposition of one of these trends (the homotopic version of Plateau's problem in terms of stratified multivarifolds) and the Plateau problem in homogeneous symplectic spaces. This last part is intended for specialists interested in the modern theory of minimal surfaces and can

be used for special courses; a command of the concepts of functional analysis is assumed.

Psychology of Reading Keith Rayner, Alexander Pollatsek, Jane Ashby, Charles Clifton Jr., 2012-05-22 Reading is a highly complex skill that is prerequisite to success in many societies in which a great deal of information is communicated in written form. Since the 1970s, much has been learned about the reading process from research by cognitive psychologists. This book summarizes that important work and puts it into a coherent framework. The book's central theme is how readers go about extracting information from the printed page and comprehending the text. Like its predecessor, this thoroughly updated 2nd Edition encompasses all aspects of the psychology of reading with chapters on writing systems, word recognition, the work of the eyes during reading, inner speech, sentence processing, discourse processing, learning to read, dyslexia, individual differences and speed reading. Psychology of Reading, 2nd Edition, is essential reading for undergraduates, graduates, and researchers in cognitive psychology and could be used as a core textbook on courses on the psychology of reading and related topics. In addition, the clear writing style makes the book accessible to people without a background in psychology but who have a personal or professional interest in the process of reading.

The Svetlana Boym Reader Svetlana Boym, 2018-04-19 Svetlana Boym was a prolific writer, a charismatic professor, a novelist, and a public intellectual. She was also a fiercely resourceful and reflective immigrant; her most resonant book, *The Future of Nostalgia*, was deeply rooted in that experience. Even after *The Future of Nostalgia* carried her fame beyond academic circles, few readers were aware of all of her creative personas. She was simply too prolific, and her work migrated across most people's disciplinary boundaries—from literary and cultural studies through film, visual, and material culture studies, performance, intermedia, and new media. The Svetlana Boym Reader presents a comprehensive view of Boym's singularly creative work in all its aspects. It includes Boym's classic essays, carefully chosen excerpts from her five books, and journalistic gems. Showcasing her roles both as curator and curated, the reader includes interviews and excerpts from exhibition catalogues as well as samples of intermedial works like *Hydrant Immigrants*. It also features autobiographical pieces that shed light on the genealogy of her scholarly work and rarities like an excerpt from Boym's first graduate school essay on Russian literature, complete with marginalia by her mentor Donald Fanger. Last but not least, the reader includes late pieces that Boym did not live to see through publication, as well as transcripts of her memorable last lectures and performances.

Machines for Living Victoria Rosner, 2020-02-04 Changes in the routines of domestic life were among the most striking social phenomena of the period between the two World Wars, when the home came into focus as a problem to be solved: re-imagined, streamlined, electrified, and generally cleaned up. Modernist writers understood themselves to be living in an epochal moment when the design and meaning of home life were reconceived. Moving among literature, architecture, design, science, and technology, *Machines for Living* shows how the modernization of the home led to profound changes in domestic life and relied on a set of emergent concepts, including standardization, scientific method, functionalism, efficiency science, and others, that form the basis of literary modernism and stand at the confluence of modernism and modernity. Even as modernist writers criticized the expanding reach of modernization into the home, they drew on its conceptual vocabulary to develop both the thematic and formal commitments of literary modernism. Rosner's work develops a new methodology for interdisciplinary modernist studies and shows how the reinvention of domestic life is central to modernist literature.

Diagnosis and Correction of Reading Difficulties in Secondary School Students Wilma H. Miller, 1973

Minimal Submanifolds in Pseudo-Riemannian Geometry Henri Anciaux, 2011 Since the foundational work of Lagrange on the differential equation to be satisfied by a minimal surface of the Euclidean space, the theory of minimal submanifolds have undergone considerable developments, involving techniques from related areas, such as the analysis of partial differential equations and complex analysis. On the other hand, the relativity theory has led to the study of pseudo-Riemannian manifolds, which turns out to be the most general framework for the study of minimal submanifolds. However, most of the recent books on the subject still present the theory only in the Riemannian case. For the first time, this textbook provides a self-contained and accessible introduction to the subject in the general setting of pseudo-Riemannian geometry, only assuming from the reader some basic knowledge about manifold theory. Several classical results, such as the Weierstrass representation formula for minimal surfaces, and the minimizing properties of complex submanifolds, are presented in full generality without sacrificing the clarity of exposition. Finally, a number of very recent results on the subject, including the classification of equivariant minimal hypersurfaces in pseudo-Riemannian space forms and the characterization of minimal Lagrangian surfaces in some pseudo-Kähler manifolds are given.

Minimal Ideas Werner Abraham, 1996-01-01 The articles in this volume are inspired by the Minimalist Program first outlined in Chomsky's MIT Fall term class lectures of 1991 and in his seminal paper *A Minimalist Program for Linguistic Theory*. The articles seek to develop further some key idea in the Minimalist Program, sometimes in ways deviating from the course taken by Chomsky. The articles are preceded by a 40 page introduction into the minimalist framework. The introduction pays special attention to the question how the minimalist framework developed out of the Principles and Parameters (Government and Binding) framework. The introduction serves as a guide through the entire volume, presenting the issues to be discussed in the articles in detail, and offering a thematic overview over the volume as a whole. Most of the articles in this volume are concerned with issues raised in Chomsky's first two minimalist papers, namely *A Minimalist Program for Linguistic Theory* (1993, first distributed in 1992) and *Bare Phrase Structure* (1995a, first distributed 1994). In acknowledgment of this, each article starts out with a quote from Chomsky (1993, 1995a). This quote also serves to highlight the particular grammatical or theoretical issue that is primarily discussed in the relevant article. Several articles relate issues raised in Chomsky's first two minimalist papers to the basic ideas in Kayne's book, *The Antisymmetry of Syntax* (1994, distributed in part in manuscript form in 1993). In many respects, therefore, these articles develop alternatives to ideas proposed in chapter 4, *Categories and Transformations*, of Chomsky's most recent book, *The Minimalist Program* (1995b). Some of the articles contain references to chapter 4, and some comments on similarities and differences between ideas developed in these papers and in chapter 4 of Chomsky 1995b can also be found in the Introduction to this volume.

Fiction and Narrative Derek Matravers, 2014-04-24 For the past twenty years there has been a virtual consensus in philosophy that there is a special link between fiction and the imagination. In particular, fiction has been defined in terms of the imagination: what it is for something to be fictional is that there is some requirement that a reader imagine it. Derek Matravers argues that this rests on a mistake; the proffered definitions of 'the imagination' do not link it with fiction but with representations more generally. In place of the flawed consensus, he offers an account of what it is to read, listen to, or watch a narrative whether that narrative is fictional or non-fictional. The view that emerges, which draws extensively on work in psychology, downgrades the divide between fiction and non-fiction and largely dispenses with the imagination. In the process, he casts new light on a succession of issues: on the 'paradox of fiction', on the issue of fictional narrators, on the problem of 'imaginative resistance', and on the nature of our engagement with film.

Project Management Tools and Techniques Deborah Sater Carstens, Gary L. Richardson, Ronald B. Smith, 2013-04-08 A combination of art and skill that results in the balancing of project objectives against restraints of time, budget, and quality, effective project management requires skill and experience as well as many tools and techniques. *Project Management Tools and Techniques: A Practical Guide* describes these tools and techniques and how to use them, giving students the strong foundation they need to develop the skills and experience needed for a successful career in project management. The first five sections discuss a typical project life cycle, and beginning with an introduction to project management in terms of the role it plays in the organization and how a business case drives the process. From this starting point, the various planning and control-oriented techniques described evolve this process through the life cycle from scope development to completion. The final section closes the discussion with a group of more contemporary topics labeled advanced. These

are essential tools that need to be in wide use but are still evolving in practice. Most of the chapters supply sample questions and exercises to help with a review of the material. Each of the authors has extensive real-world experience in her or his respective professional areas with a combined experience of about 100 years. They have selected topics based on their valuation of the tool and its project management value. They present the material in such a way that the concepts can be applied to any project. Once this material is mastered, students will have a good overview regarding the basic planning and control actions required by a project manager. Also, this book will make a great reference guide that can be used by project managers and team members for years to come.

An Experimental Study in the Psychology of Reading William Anton Smith,1917
Readers and Reading Andrew Bennett,2014-07-15 Much literary criticism focuses on literary producers and their products, but an important part of such work considers the end-user, the reader. It asks such questions as: how far can the author condition the response of the reader, and how much does the reader create the meaning of a text? Dr Bennett's collection includes important essays from such writers and critics as Wolfgang Iser, Mary Jacobus, Roger Chartier, Michel de Certeau, Shoshana Felman, Maurice Blanchot, Paul de Man and Yves Bonnefoy. It looks in turn at deconstructionist, feminist, new historicist and psychoanalytical response to the school. The book then considers the act of reading itself, discussing such issues as the uniqueness of any reading and the difficulties involved in its analysis.
