The 300 Daniel Wasserbly, 2020-06-16 Military and security expert Daniel Wasserbly introduces the elite unit tasked with protecting the nation from long-range weapons of mass destruction. Comprised of just three hundred soldiers, the United States Army's 100th Missile Defense Brigade and 49th Missile Defense Battalion utilize sophisticated and cutting-edge technology to monitor the skies and seas surrounding the country and shield three hundred million Americans against any potential nuclear threat. Named for the number of Spartan warriors who defended Greece at the Battle of Thermopylae, these vigilant individuals endure rigorous, always-evolving regimens to maintain peak efficiency in the event of an actual nuclear strike. Assigned to extraordinary locations at Fort Greely, Alaska and Schriever Air Force Base, Colorado, the 300 are responsible for the highest levels of homeland security. They not only maintain a never-ending watch via radar and sensor arrays, but receive continuous training in operating advanced interceptors designed to home in on and destroy in-flight ballistic missiles. It's a complex—and occasionally unreliable—defense system that scientists and engineers are always improving and upgrading. With unprecedented access to the highly classified strategic nerve centers of U.S. Northern Command in Cheyenne Mountain, years of research, and dozens of exclusive interviews with normally inaccessible missile crews, Wasserbly reveals the incredible true story behind the 300's essential defense operations.

Ballistic-Missile Defence and Strategic Stability Dean A. Wilkening, 2014-02-25 Should the US deploy ballistic-missile defences? The arguments for and against are becoming increasingly polarised. This paper offers what is currently lacking in the debate: a quantitative analysis of how well defences would have to work to meet specific security objectives, and what level of defence might upset strategic stability.

Regional Missile Defense from a Global Perspective Catherine McArdle Kelleher, Peter Dombrowski, 2015-09-23 Regional Missile Defense from a Global Perspective explains the origins, evolution, and implications of the regional approach to missile defense that has emerged since the presidency of George H. W. Bush, and has culminated with the missile defense decisions of President Barack Obama. The Obama administration's overarching concept for American missile defense focuses on developing both a national system of limited ground-based defenses, located in Alaska and California, intended to counter limited intercontinental threats, and regionally-based missile defenses consisting of mobile ground-based technologies like the Patriot PAC-3 system, and sea-based Aegis-equipped destroyer and cruisers. The volume is intended to stimulate renewed debates in strategic studies and public policy circles over the contribution of regional and national missile defense to global security. Written from a range of perspectives by practitioners and academics, the book provides a rich source for understanding the technologies, history, diplomacy, and strategic implications of the gradual evolution of American missile defense plans. Experts and non-experts alike—whether needing to examine the offense-defense tradeoffs anew, to engage with a policy update, or to better understand the debate as it relates to a country or region—will find this book invaluable. While it opens the door to the debates, however, it does not find or offer easy solutions—because they do not exist.

Naval Forces' Capability for Theater Missile Defense National Research Council, Division on Engineering and Physical Sciences, Naval Studies Board, Committee for Naval Forces' Capability for Theater Missile Defense, 2001-06-01 At the request of the Chief of Naval Operations, the National Research Council, under the auspices of the Naval Studies Board, established a committee to assess the Department of the

Navy's current and future naval theater missile defense (TMD) capabilities. The Committee for Naval Forces' Capability for Theater Missile Defense first convened in April 2000 and met approximately 2 days a month for 8 months. This report is based on the information presented to the committee during that period and on the committee members' accumulated experience and expertise in military operations, systems, and technologies.

Complex Air Defense Tom Karako, Masao Dahlgren, 2022-05 Hypersonic missiles are not unstoppable. This CSIS report argues how numerous efforts tailored to exploit key vulnerabilities of the hypersonic flight regime can make hypersonic defense a tractable problem.

Ballistic Missile Defense Technologies United States. Congress. Office of Technology Assessment, 1985
Seize the High Ground James A. Walker, Lewis Bernstein, Sharon Lang, 2003 [Seize the high ground is a] narrative history of the Army's aerospace experience from the 1950s to the present. The focus is on ballistic missile defense, from the early NIKE-HERCULES missile program through the SAFEGUARD acquisition site allowed by the 1972 ABM Treaty to the more advanced 'Star Wars' concepts studies toward the end of the century. [What is] covered is not only the technological response to the threat but the organizational and tactical development of the commands and units responsible for the defense mission--CMH website.

Sea-Based Ballistic Missile Defense Ronald O'Rourke, 2011 This is a print on demand edition of a hard to find publication. The proposed FY 2010 defense budget requests \$1,859.5 million for the Aegis Ballistic Missile Defense (BMD) program. The issue for Congress discussed in this report is: What should be the role of sea-based systems in U.S. ballistic missile defense, and are DoD's programs for sea-based BMD capabilities appropriately structured and funded? Potential issues for Congress re: sea-based BMD systems include the number of SM-3 interceptors planned for procurement, whether development of a far-term sea-based terminal defense BMD capability should be accelerated, technical risk in the Aegis BMD program, the number of Aegis BMD ships, and the role of Aegis BMD in European missile defense. The HAWK Air Defense Missile System Marc Romanych, Jacqueline Scott, 2022-08-18 This is the first history of the legendary US Army's HAWK missile system, the world's first mobile air-defense missile system, which saw service and combat around the world. Designed to counteract the threat posed by advanced 1950s Soviet-built aircraft, the first HAWK unit became operational in 1959. At its peak, it saw frontline service in the Far East, Panama, Europe, and in the Middle East. Units were also used during the Cuban Missile Crisis, Vietnam War, and Persian Gulf War. In the hands of other nations, HAWK proved its efficacy in combat during the Arab-Israeli Wars, Iran-Iraq War, Chadian-Libyan War, and the Iraqi invasion of Kuwait. Credited with shooting down more than 100 aircraft during its combat career, the HAWK system was respected for its lethality. Such was Soviet concern, that the USSR developed electronic jammers, anti-radiation missiles, and other countermeasures specifically to degrade its effectiveness. The US retired its HAWK systems soon after the Cold War ended in 1991 when air defense priorities shifted from aircraft to ballistic missile defense, yet a modernized version of the system remains in service to this day in many nations. Packed with archive photos and original artwork, this is the first book about the HAWK system. Featuring research from HAWK technical and field manuals, interviews with HAWK veterans, and detailing the authors' personal experiences with HAWK missile units, it provides a comprehensive study of one of the most lethal and effective air missile systems of all time.

Missile Defense Steven A. Hildreth, 2004 The United States has pursued missile defenses since the dawn of the missile age shortly after World War II. The development and deployment of missile defenses has not only been elusive, but has proven to be one of the most divisive issues of the past generation. The

Bush Administration substantially altered the debate over missile defenses. The Administration requested significant funding increases for missile defense programs, eliminated the distinction between national and theater missile defense, restructured the missile defense program to focus more directly on developing deployment options for a layered capability to intercept missiles aimed at U.S. territory across the whole spectrum of their flight path, adopted a new, untried development and acquisition strategy, announced U.S. withdrawal from the 1972 Anti-ballistic Missile Treaty, and is deploying an initial national missile defense capability. Critics, however, take issue with assertions that the threat is increasing, citing evidence that the number of nations seeking or possessing nuclear weapons has actually declined over the past twenty years. Moreover, they argue that the technology for effective missile defense remains immature, that deployment is provocative to allies, friends, and adversaries, and it is a budget-buster that reduces the availability of funds to modernize and operate U.S. conventional military forces. They argue especially that some major powers view U.S. missile defense as an attempt at strategic domination and that other, such as China, will expand their missile capabilities in response.

Directed energy missile defense in space, 1984 This Background Paper describes and assesses current concepts for directed-energy ballistic missile defense in space. Its purpose is to provide Members of Congress, their staffs, and the public with a readable introduction to the so-called 'Star Wars' technologies that some suggest might form the basis of a future nationwide defense against Soviet nuclear ballistic missiles. Since these technologies are a relatively new focus for U.S. missile defense efforts, little information about them has been readily available outside the expert community. Directed-energy or 'beam' weapons comprise chemical lasers, excimer and free electron lasers, nuclear bomb-powered x-ray lasers, neutral and charged particle beams, kinetic energy weapons, and microwave weapons. In addition to describing these devices, this Background Paper assesses the prospects for fashioning from such weapons robust and reliable wartime defense system resistant to Soviet countermeasures. The assessment distinguishes the prospects for perfect or near-perfect protection of U.S. cities and population from the prospects that technology will achieve a modest, less-than-perfect level of performance that will nonetheless be seen by some experts as having strategic value. Though the focus is technical, the Paper also discusses, but does not assess in detail, the strategic and arms control implications of a major U.S. move to develop and deploy ballistic missile defense (BMD).

Directed Energy Missile Defense in Space Ashton B. Carter, 1984

Regional Ballistic Missile Defense in the Context of Strategic Stability Russian Academy of Sciences, National Academy of Sciences, Policy and Global Affairs, Committee on International Security and Arms Control, Joint Committee on Ballistic Missile Defense in the Context of Strategic Stability, 2019-12-13 As ballistic missile technology proliferates, and as ballistic missile defenses are deployed by both the Russian Federation and the United States, it is increasingly important for these two countries to seek ways to reap the benefits of systems that can protect their own national security interests against limited missile attacks from third countries without undermining the strategic balance that the two governments maintain to ensure stability. *Regional Ballistic Missile Defense in the Context of Strategic Stability* examines both the technical implications of planned missile defense deployments for Russian and U.S. strategic deterrents and the benefits and disadvantages of a range of options for cooperation on missile defense.

Missiles: Defense Programs, Threats and Types Maik Schiffer, 2020-04-22 The United States has been developing and deploying ballistic missile defenses (BMD) to defend against enemy missiles continuously since the late 1940s. Chapter 1 gives a brief history of the BMD Program. For over half a century, the Department of Defense (DOD) has funded efforts to defend the United States from ballistic missile attacks.

The Missile Defense Agency (MDA) developing missile defense capabilities to defend the United States, deployed forces, and regional allies from missile attacks. Chapter 2 addresses for fiscal year 2018 (1) the progress MDA made in achieving delivery and testing goals and (2) the extent to which MDA made progress in developing and delivering integrated regional BMDS capabilities. Chapter 3 discusses (1) the challenges MDA and the defense intelligence community face in meeting the agency's threat assessment needs and (2) the extent to which MDA engages the defense intelligence community on missile defense acquisitions. Foreign countries have made advancements in their nuclear weapons and ballistic missile programs. Chapter 4 reports on the current status of North Korea's nuclear weapons and ballistic missile programs, while chapter 5 provides information on Iran's ballistic missile capabilities. Members of Congress and Pentagon officials have placed a growing emphasis on U.S. programs to develop hypersonic weapons as a part of an effort to acquire the capability for the United States to launch attacks against targets around the world in under an hour. Chapter 6 focuses, primarily, on the Pentagon's ongoing program to develop ballistic missile-based conventional prompt strike systems. The Navy undertook a conceptual design phase for the FFG(X) Guided Missile Frigate program that enabled industry to inform FFG(X) requirements, identify opportunities for cost savings, and mature different ship designs. Chapter 7 addresses the FFG(X) acquisition approach and contracting plans. Chapter 8 provides background information and issues for Congress on the Aegis ballistic missile defense (BMD) program, which is carried out by the Missile Defense Agency (MDA) and the Navy, and gives Navy Aegis cruisers and destroyers a capability for conducting BMD operations.

NATO Missile Defense and the European Phased Adaptive Approach Steven J. Whitmore, John R. Deni, 2013 In 2010, NATO decided to expand its ballistic missile defense program, in part because of the American offer to include its European Phased Adaptive Approach (EPAA) as the centerpiece of an expanded effort. For the Allies' part, few have actually contributed tangible ballistic missile defense assets, in terms of missile interceptors, radars or other sensors, or ballistic missile defense-related platforms. This is likely to have significant implications for the U.S. Army, which has an important but largely underappreciated role in NATO missile defense today. In particular, the Army is likely to face increased manpower demands, materiel requirements, and training needs in order to meet the demand signal created by the NATO ballistic missile defense program. Additionally, Army units involved directly in or in support of ballistic missile defense are likely to face a higher OPTEMPO than currently projected. Ultimately, this will exacerbate the perceived imbalance in transatlantic burden-sharing, particularly if the EPAA provides little, if any, benefit to the defense of U.S. territory, given Washington's decision to cancel Phase 4 of that framework.

Options for Deploying Missile Defenses in Europe United States. Congressional Budget Office, 2009 Examines the cost and potential defensive capability of the proposed European ground-based midcourse defense system. Also explores alternatives.

Navy Aegis Ballistic Missile Defense (BMD) Program Ronald O'Rourke, 2011-05 The Aegis BMD program gives Navy Aegis cruisers and destroyers a capability for conducting BMD operations. Under current plans, the number of BMD-capable Navy Aegis ships is scheduled to grow from 20 at the end of FY 2010 to 38 at the end of FY 2015. Contents of this report: (1) Intro.; (2) Background: Planned Quantities of Ships, Ashore Sites, and Interceptor Missiles; Aegis BMD Flight Tests; Allied Participation and Interest in Aegis BMD Program; (3) Issues for Congress: Demands for BMD-Capable Aegis Ships; Demands for Aegis Ships in General; Numbers of SM-3 Interceptors; SM-2 Block IV Capability for 4.0.1 and Higher Versions; (4) Legislative Activity for FY 2011. Charts and tables. This is a print on demand publication.

Shield of Dreams Stephen J. Cimbala, 2008 This book examines the implications of deploying missile defences by the United States and Russia within the current and next decades. Noting that U.S. plans to locate parts of the global ballistic missile defence system in eastern Europe contributed to a deterioration in U.S.-Russian relations, Cimbala discusses how a post-Bush/post-Putin era could open the door either to improved detente or increased acrimony over such issues as missile defences and NATO enlargement, the fate of the CFE and INF treaties, and U.S. hegemony in world politics.
