The 50-Year History of Mitutoyo Tadao Arai, 1986
Nuclear Black Markets Mark Fitzpatrick

(M.P.P.), 2007 The arrest and public confession of Pakistani nuclear weapons scientist Abdul Qadeer Khan in 2004 revealed the existence of a global proliferation network which had, over almost two decades, provided nuclear technology, expertise, and designs to Iran, North Korea, Libya and possibly other countries. Khan was not the only nuclear arms merchant and Pakistan was not the only country implicated in his shadowy network. It spanned three continents and eluded both national and international systems of export controls that had been designed to prevent illicit trade. The discovery of the network highlighted concerns that nuclear technology is no longer the monopoly of industrially advanced countries, but can be purchased off-the-shelf by both states and terrorist groups. The IISS Strategic Dossier on nuclear black markets provides a comprehensive assessment of the Pakistani nuclear programme from which the Khan network emerged, the network's onward proliferation activities, and the illicit trade in fissile materials. In addition, the Strategic Dossier provides an overview of the clandestine nuclear procurement activities of other states, along with the efforts made both by Pakistan and the international community to prevent the reoccurrence of further proliferation networks and to secure nuclear technology. The final chapter assesses policy options for further action.

Coordinate Measuring Machines and Systems Robert J. Hocken, Paulo H. Pereira, 2016-04-19 Since John Bosch edited and published the first version of this book in 1995, the world of manufacturing and coordinate measuring machines (CMMs) and coordinate measuring systems (CMSs) has changed considerably. However, the basic physics of the machines has not changed in essence but have become more deeply understood. Completely revised and updated

Coordinate Measuring Machines and Systems John A. Bosch, 1995-04-10 This work reviews the basic concepts of co-ordinate metrology. It defines what co-ordinate measuring machines (CMMs) are and details how they can be applied to gain a competitive advantage in a variety of business settings, from small machine shops to global manufacturers. Areas that are critical for the successful application of CMMs - including environmental factors, the measuring of speed and accuracy, traceability, versatility and programming methodology - are considered.; The book is intended for manufacturing, mechanical, quality control, design, industrial, automation, automotive and aerospace engineers and managers, as well as upper-level undergraduate and graduate students in these disciplines.; College or university bookstores may order five or more

Snow Crystals Kenneth G. Libbrecht,2021-12-21

Despite substantial, cross-disciplinary interest in the subject as a scientific case study, surprisingly little has been written on the science of snowflakes and their formation. For materials scientists, snowflakes constitute archetypal examples of crystal growth; for chemists, the site of complex molecular dynamics at the ice surface. Physicists can learn from snowflake symmetry and self-assembly; geologists study snow as mineral crystals; and biologists can even gain insight into the creation of shape and order in organisms. In the humble snowflake are condensed many of the processes-many of them still not fully understood-that govern the organization of classical systems at all levels of the natural world. This book by Kenneth Libbrecht-inarguably the world's foremost expert on the subject-will be the authoritative text on the science of snow crystals. It will cover all of the physical processes that govern the life of a snowflake, including how snowflakes grow and why they have the shapes they do. It will also outline techniques for creating and experimenting with snow crystals, both with computer models and in

the lab. Featuring hundreds of color illustrations, the book will be comprehensive and is sure to become definitive resource for researchers for years, if not decades, to come--
