New Practices - New Pedagogies Malcolm Miles, 2004-11-23 With radical changes happening in arts over the past two decades, this book brings us up to date with the social and economic contexts in which the arts are produced. Influential and knowledgeable leaders in the field debate how arts education - particularly in visual art - has changed to meet new needs or shape new futures for its production and reception. Opening up areas of thought previously unexplored in arts and education, this book introduces students of visual culture, performance studies and art and design to broad contextual frameworks, new directions in practice, and finally gives detailed cases from, and insights into, a changing pedagogy.

Imperial Russia's Muslims Mustafa Tuna, 2015-06-04 Investigates the entangled transformations of Russia's Muslim communities from the late eighteenth century through to the First World War. Anomalous and Topological Hall Effects in Itinerant Magnets Yuki Shiomi, 2013-04-02 This book presents an investigation of the anomalous and topological Hall effects in some itinerant ferromagnets and helimagnets by measurements of Hall effects driven by electrical or heat current. New clarifications are provided for spin-dependent Hall effects induced by the Berry phase, skew scattering, and scalar spin chirality. The author reveals the scattering-free nature of the Berry-phase-induced anomalous Hall current by conducting the first comparative study of electrical and thermal Hall effects. The impurity-element dependence of the anomalous Hall effect caused by skew scattering is systematically investigated in the low-resistivity region for Fe. Two new examples showing a topological Hall effect are found in helimagnets, in which nonzero scalar spin chirality arises from the modulation of spin structure through Dzyaloshinsky-Moriya (DM) interaction. Such a DM-interaction-mediated topological Hall effect is a new type of topological Hall effect. Also the temperature dependence of topological Hall terms in the thermal Hall effect and Nernst-Ettingshausen effect is found to be totally different from that in the electrical Hall effect. These results will be useful for applications of spin current to devices with low power consumption.
