Bioactive Glasses Aldo R Boccaccini, Delia S Brauer, Leena Hupa, 2016-11-28 The global ageing society has significantly increased the need for implant materials, which not only replace damaged or lost tissue but are also able to regenerate it. The field of bioactive glasses has been expanding continuously over recent years as they have been shown to bond with hard and soft tissue, release therapeutically active ions, and be capable of enhancing bone formation and regeneration. In addition, they are successfully being used to re-mineralise teeth, thereby making bioactive glasses highly attractive materials in both dentistry and medicine. Understanding the multidisciplinary requirements set by the human body's environment and the special characteristics of the different families of bioactive glasses is a key in developing new compositions to novel clinical applications. Bioactive Glasses aims to bridge the different scientific communities associated with the field of bioactive glasses with focus on the materials science point of view. Emerging applications covered include soft tissue regeneration, wound healing, vascularisation, cancer treatment and drug delivery devices. This book provides a comprehensive overview of the latest applications of bioactive glasses for material scientists.

The Chemistry and Bioactive Components of Turmeric Sreeraj Gopi, Sabu Thomas, Ajaikumar B Kunnumakkara, Bharat B Aggarwal, Augustine Amalraj, 2020-10-15 Turmeric belongs to the family Zingiberaceae and is a yellow spice of high economic importance due to its medicinal value. Cultivated in tropical and sub-tropical regions around the world, it is used extensively as a colouring, flavouring and preserving agent. In recent years, several drugs derived from natural products have been developed and current drug research is actively investigating the possible therapeutic roles of many Ayurvedic medicines, most notable among those being examined is turmeric. The wide range of pharmacological activities attributed to turmeric come mainly from curcuminoids and two related compounds, demethoxycurcumin and bisdemethoxycurcumin. This comprehensive book brings together the research carried out on constituents obtained from turmeric and highlights their chemical and biological activities. Comprising 17 chapters, each written by experts in their respective field and curated by authorities, it will be invaluable to all those who are involved in the production, processing, marketing, and the use of turmeric. Appealing to researchers and professionals in natural products, nutraceuticals and food chemists, this book is exposing some of the myths and showing areas for possible future use.

The New Digital Storytelling Bryan Alexander, 2011-04-07 This book surveys the many ways of telling stories with digital technology, including blogging, gaming, social media, podcasts, and Web video. Digital storytelling uses new media tools and platforms to tell stories. The second wave of digital storytelling started in the 1990s with the rise of popular video production, then progressed in the new century to encompass newer, social media technologies. The New Digital Storytelling: Creating Narratives with New Media is the first book that gathers these new, old, and emergent practices in one place, and provides a historical context for these methods. Author Bryan Alexander explains the modern expression of the ancient art of storytelling, weaving images, text, audio, video, and music together. Alexander draws upon the latest technologies, insights from the latest scholarship, and his own extensive experience to describe the narrative creation process with personal video, blogs, podcasts, digital imagery, multimedia games, social media, and augmented reality—all platforms that offer new pathways for creativity, interactivity, and self-expression.

This book delivers the most relevant technological developments from academia and water authorities, comprehensively addressing the main aspects of interest in design, construction, and operation of UASB reactors for sewage treatment. Special attention is given to the proper and integrated management of sludge, scum, gaseous emissions, energy recovery, and effluent quality. The main purpose is to provide information and share experiences not yet compiled in the specialized literature on anaerobic sewage treatment. Therefore, a sequence of 12 well-interconnected chapters consolidates the practical knowledge and experiences that important research groups and recognized professionals worldwide have acquired over the past 20 years in demo- and full-scale
