**Marketing and Mobile Financial Services** Aijaz A. Shaikh, Heikki Karjalainen, 2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the

frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

An Investigation into Authentication Security of GSM algorithm for Mobile Banking Ali Raheem, 2014-02-01 Due to the mobility of its users, GSM systems are vulnerable to an unauthorized access and eaves droppings when compared with the traditional fixed wired networks. The main idea of this project is to develop an application device in order to secure mobile banking over unsecure GSM network. It is important to mention that mobile banking is a term that is used for performing balance checks, account transactions, payments, credit applications, and many other online applications. Unfortunately, the security architecture for cellular network is not entirely secure. As a matter of fact, GSM network infrastructure is proved to be insecure. Many possible attacks are documented in literature. For security was never considered in the initial stages, the sending of protective banking information across an open mobile phone network remains insecure. Consequently, this project focuses entirely on the development and design of security techniques in order to asses some security issues within mobile banking through cellular phone network (GSM). The main aim of this project is to investigate and examine the following: 1. Security issues in each level of the mobile network architecture. 2. Messages and signals exchanged between user's cellular phone and mobile network at each level. 3. The overall security architecture of GSM flaws. 4. Some

existing security measures for mobile transactions. 5. The current security within SMS banking and GPRS banking. Finally, two folded simulations in MATLABT were performed using OFDM which is a broadband multicarrier modulation method that provides a high performance operation to transmitted and received data or information.

The Impact of New Technology and Mobile Banking in Africa. A Case Study of the Standard Bank South Africa Difrine Madara, 2019-11-28 Seminar paper from the year 2019 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: A, Kenyatta University, language: English, abstract: This paper explores the impact of new technology and mobile banking in the entire financial sector in Africa. The paper focuses on the case of Standard Bank South Africa to assist in understanding the challenges faced by the major commercial banks in adopting new banking technologies in less developed worlds, such as Africa. To realize the primary goal of this paper, the researcher discusses how technology can help Standard Bank to move forward in the aftermath of the 2008/9 financial crisis and the new opportunities for the bank to grow its financial service businesses. Furthermore, the research suggests how new technological applications in the financial services sector can help Africans to escape poverty and if diversification is appropriate for a diverse bank, such as Standard Bank. Technology has immensely transformed business-to-business

and within business transactions and interactions. Technological applications are enabling reconfiguration of design, production, marketing, and service delivery in most businesses. For instance, the design reconfigurations have allowed for the implementation of online marketplaces, mobile business activities, such as mobile banking, and better risk assessment. In the emerging financial markets of Africa, disruptive market innovations and reconstituted value chains have become key drivers of the growing financial services industry. Despite the huge benefits of financial innovations, conventional financial services providers, such as banks, finance companies, microfinance institutions, and insurance must be wary of the new risks and challenges posed by these financial technologies. For a major bank like the Standard Bank, financial innovations, such as e-banking and mobile banking present both new opportunities and threats to its core businesses.

Mobile Financial Services Silas Paulsen, 2013 Mobile phones have clearly become ubiquitous and a standard aspect of daily life for many American consumers in the last decade. Ongoing innovations in mobile finance show some potential to change the way consumers conduct financial transactions by offering consumers new services. Yet, many people remain sceptical of the benefit of mobile financial services and the level of security provided along with such services. This book examines the use of mobile technology to access financial services and make financial decisions, with a focus on how consumers are interacting with financial institutions; current use of mobile banking and payments; and other mobile financial services and new technologies.

**Bank 3.0** Brett King, 2012-11-19 The first edition of BANK 2.0—#1 on Amazon's bestseller list for banking and finance in the US, UK, Germany, France, and Japan for over 18 months—took the financial world by storm and became synonymous with disruptive customer behaviour, technology shift, and new banking models. In BANK 3.0, Brett King brings the story up to date with the latest

trends redefining financial services and payments—from the global scramble for dominance of the mobile wallet and the expectations created by tablet computing to the operationalising of the cloud, the explosion of social media, and the rise of the de-banked consumer, who doesn't need a bank at all. BANK 3.0 shows that the gap between customers and financial services players is rapidly widening, leaving massive opportunities for new, non-bank competitors to totally disrupt the industry. On the Web and on Mobile, the customer isn't king—he's dictator. Highly impatient, skeptical, cynical. Brett King understands deeply what drives this new hard-nosed customer. Banking professionals would do well to heed his advice. —Gerry McGovern, author of Killer Web Content

Integrity in Mobile Phone Financial Services Pierre-Laurent Chatain, Raul Hernandez-Coss, Kamil Borowik, Andrew Zerzan, 2008-06-10 Governments are challenged to make an innovation-friendly climate while simultaneously ensuring that business development remain sustainable. Criminal use of the technology terrorist financing and money laundering challenges long-run business viability via risk of massive investment flight and public distrust of new players entering the market. Sustainable business models are those that base regulation on a careful risk-based analysis. This study identifies the perceived risks and compares them with the actual level of risk for each category of mobile phone financial services. The comparison reveals that the perceptions do not weigh up to the reality. Based on fieldwork in seven locations where the technology has taken off, this paper finds that providers apply measures that are consistent with international standards to combat money laundering and terrorist financing. It identifies the sometimes non-traditional means the industry uses that both mitigate the risks and are in line with good business practices. Acknowledging that mobile phone financial services are no riskier than other channels, governments are called to treat

them as an opportunity to expand access to finance.

*Mobile Banking and Access to Public Services in Bangladesh* M. Kabir Hassan, Jannatul Ferdous, Hasanul Banna, 2024-03-31 This Element examines the role of mobile banking in accessing public services in Bangladesh. It also identifies the key influencing factors and challenges in accessing public services through mobile banking and suggests policy measures to overcome these challenges. Based on a survey of 300 people, the study finds that mobile banking facilitates access to public services, which is beneficial and effective for both rural and urban users, as technology can increase the quality of work. Despite the benefits, some individuals are reluctant to use the service due to high transaction costs and a lack of digital literacy.
