Comprehensive Healthcare Simulation: Mobile Medical Simulation Patricia K. Carstens,Paul Paulman,Audrey Paulman,Marissa J. Stanton,Brian M. Monaghan,Douglas Dekker,2020-02-13 This book provides information to support the new and growing field of medical simulation training using mobile simulation vehicles. These mobile training programs bring vehicles equipped with spaces to simulate patient care areas, task trainers, and mannequins directly to the medical provider. This concise reference introduces programs that bring necessary training to providers and offers step by step guidance on how to establish and run a mobile medical simulation program. Divided into two main sections, the first analyzes the methods and techniques to implement a program, including marketing, finances, and program evaluation. The second section then delves into greater detail regarding the actual teaching and training, including chapters on educational methodology, scenario design, and how to prepare for a simulation session. Part of the groundbreaking Comprehensive Healthcare Simulation Series, Mobile Medical Simulation is an ideal guide for administrators and managers who design and implement mobile simulation training programs, as well as educators and trainers working in the field.

Cryptographic Primitives in Blockchain Technology Andreas Bolting,2020-09-09 Many online applications, especially in the financial industries, are running on blockchain technologies in a decentralized manner, without the use of an authoritative entity or a trusted third party.

Such systems are only secured by cryptographic protocols and a consensus mechanism. As blockchain-based solutions will continue to revolutionize online applications in a growing digital market in the future, one needs to identify the principal opportunities and potential risks. Hence, it is unavoidable to learn the mathematical and cryptographic procedures behind blockchain technology in order to understand how such systems work and where the weak points are. Cryptographic Primitives in Blockchain Technology provides an introduction to the mathematical and cryptographic concepts behind blockchain technologies and shows how they are applied in blockchain-based systems. This includes an introduction to the general blockchain technology approaches that are used to build the so-called immutable ledgers, which are based on cryptographic signature schemes. As future quantum computers will break some of the current cryptographic primitive approaches, Andreas Bolting considers their security and presents the current research results that estimate the impact on blockchain-based systems if some of the cryptographic primitive break. Based on the example of Bitcoin, he shows that weak cryptographic primitives pose a possible danger for the ledger, which can be overcome through the use of the so-called post-quantum cryptographic approaches.

MoneyBall Medicine Harry Glorikian, Malorye Allison Branca, 2017-11-20 How can a smartwatch help patients with diabetes manage their disease? Why can't patients find out prices for surgeries

and other procedures before they happen? How can researchers speed up the decade-long process of drug development? How will Precision Medicine impact patient care outside of cancer? What can doctors, hospitals, and health systems do to ensure they are maximizing high-value care? How can healthcare entrepreneurs find success in this data-driven market? A revolution is transforming the \$10 trillion healthcare landscape, promising greater transparency, improved efficiency, and new ways of delivering care. This new landscape presents tremendous opportunity for those who are ready to embrace the data-driven reality. Having the right data and knowing how to use it will be the key to success in the healthcare market in the future. We are already starting to see the impacts in drug development, precision medicine, and how patients with rare diseases are diagnosed and treated. Startups are launched every week to fill an unmet need and address the current problems in the healthcare system. Digital devices and artificial intelligence are helping doctors do their jobs faster and with more accuracy.

MoneyBall Medicine: Thriving in the New Data-Driven Healthcare Market, which includes interviews with dozens of healthcare leaders, describes the business challenges and opportunities arising for those working in one of the most vibrant sectors of the world's economy. Doctors, hospital administrators, health information technology directors, and entrepreneurs need to adapt to the changes effecting healthcare today in order to succeed in the new, cost-conscious and value-based

environment of the future. The authors map out many of the changes taking place, describe how they are impacting everyone from patients to researchers to insurers, and outline some predictions for the healthcare industry in the years to come.

Cognitive Hyperconnected Digital Transformation

Ovidiu Vermesan, Joël Bacquet, 2022-09-01 Cognitive Hyperconnected Digital Transformation provides an overview of the current Internet of Things (IoT) landscape, ranging from research, innovation and development priorities to enabling technologies in a global context. It is intended as a standalone book in a series that covers the Internet of Things activities of the IERC-Internet of Things European Research Cluster, including both research and technological innovation, validation and deployment. The book builds on the ideas put forward by the European Research Cluster, the IoT European Platform Initiative (IoT-EPI) and the IoT European Large-Scale Pilots Programme, presenting global views and state-of-the-art results regarding the challenges facing IoT research, innovation, development and deployment in the next years. Hyperconnected environments integrating industrial/business/consumer IoT technologies and applications require new IoT open systems architectures integrated with network architecture (a knowledge-centric network for IoT), IoT system design and open, horizontal and interoperable platforms managing things that are digital, automated and connected and that function in real-time with remote access and control based on Internet-enabled tools. The IoT is bridging the

physical world with the virtual world by combining augmented reality (AR), virtual reality (VR), machine learning and artificial intelligence (AI) to support the physical-digital integrations in the Internet of mobile things based on sensors/actuators, communication, analytics technologies, cyber-physical systems, software, cognitive systems and IoT platforms with multiple functionalities. These IoT systems have the potential to understand, learn, predict, adapt and operate autonomously. They can change future behaviour, while the combination of extensive parallel processing power, advanced algorithms and data sets feed the cognitive algorithms that allow the IoT systems to develop new services and propose new solutions. IoT technologies are moving into the industrial space and enhancing traditional industrial platforms with solutions that break free of device-, operating system- and protocol-dependency. Secure edge computing solutions replace local networks, web services replace software, and devices with networked programmable logic controllers (NPLCs) based on Internet protocols replace devices that use proprietary protocols. Information captured by edge devices on the factory floor is secure and accessible from any location in real time, opening the communication gateway both vertically (connecting machines across the factory and enabling the instant availability of data to stakeholders within operational silos) and horizontally (with one framework for the entire supply chain, across departments, business units, global factory locations and other markets). End-

to-end security and privacy solutions in IoT space require agile, context-aware and scalable components with mechanisms that are both fluid and adaptive. The convergence of IT (information technology) and OT (operational technology) makes security and privacy by default a new important element where security is addressed at the architecture level, across applications and domains, using multi-layered distributed security measures. Blockchain is transforming industry operating models by adding trust to untrusted environments, providing distributed security mechanisms and transparent access to the information in the chain. Digital technology platforms are evolving, with IoT platforms integrating complex information systems, customer experience, analytics and intelligence to enable new capabilities and business models for digital business.

On The Move to Meaningful Internet Systems 2003:
OTM 2003 Workshops Zahir Tari, 2003-10-25 missions
in fact also treat an envisaged mutual impact
among them. As for the 2002 edition in Irvine, the
organizers wanted to stimulate this cross-
pollination with a program of shared famous
keynote speakers (this year we got Sycara, - ble,
Soley and Mylopoulos!), and encouraged multiple
attendance by providing authors with free access
to another conference or workshop of their choice.
We received an even larger number of submissions
than last year for the three conferences (360 in
total) and the workshops (170 in total). Not only
can we therefore again claim a measurable success
in attracting a representative volume of scienti?c
papers, but such a harvest allowed the program
committees of course to compose a high-quality
cross-section of worldwide research in the areas
covered. In spite of the increased number of
submissions, the Program Chairs of the three main
conferences decided to accept only approximately
the same number of papers for presentation and
publication as in 2002 (i. e. , around 1 paper out
of every 4–5 submitted). For the workshops, the
acceptance rate was about 1 in 2. Also for this
reason, we decided to separate the proceedings
into two volumes with their own titles, and we are

grateful to Springer-Verlag for their collaboration in producing these two books. The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees.
