Democratic Frontiers Michael Filimowicz,2022-02-10 *Democratic Frontiers: Algorithms and Society* focuses on digital platforms' effects in societies with respect to key areas such as subjectivity and self-reflection, data and measurement for the common good, public health and accessible datasets, activism in social media and the import/export of AI technologies relative to regime type. Digital technologies develop at a much faster pace relative to our systems of governance which are supposed to embody democratic principles that are comparatively timeless, whether rooted in ancient Greek or Enlightenment ideas of freedom, autonomy and citizenship. Algorithms, computing millions of calculations per second, do not pause to reflect on their operations. Developments in the accumulation of vast private datasets that are used to train automated machine learning algorithms pose new challenges for upholding these values. Social media platforms, while the key driver of today's information disorder, also afford new opportunities for organized social activism. The US and China, presumably at opposite ends of an ideological spectrum, are the main exporters of AI technology to both free and totalitarian societies. These are some of the important topics covered by this volume that examines the democratic stakes for societies with the rapid expansion of these technologies. Scholars and students from many backgrounds as well as policy makers, journalists and the general reading public will find a multidisciplinary approach to issues of democratic values and governance encompassing research from Sociology, Digital Humanities, New Media, Psychology, Communication, International Relations and Economics.

Legal, Institutional, and Economic Indicators of Forest Conservation and Sustainable Management ,2005 This review looks at the Nation's legal, institutional, and economic capacity to promote forest conservation and sustainable resource management. It focuses on 20 indicators of Criterion Seven of the so-called Montreal Process and involves an extensive search and synthesis of information from a variety of sources. It identifies ways to fill information gaps and improve the usefulness of several indicators. It concludes that there is substantial information about the application of such capacities, although that application is widely dispersed among agencies and private interests; which in turn has led to differing interpretations of the indicators. Individual chapters identify a need to further develop the conceptual foundation on which many of the indicators are predicated. While many uncertainties in the type and accuracy of information are brought to light, the review clearly indicates that legal, institutional, and economic capacities to promote sustainability are large and widely available in both the public and private sectors.--P. vi.
