Mobile TV: Customizing Content and Experience Aaron Marcus, Anxo Cereijo Roibás, Riccardo Sala, 2009-12-01 Developing usable, useful, and appealing solutions for the customer or user experience requires customization according to specific users' needs amidst frequently changing physical and social environments. Complex design problems like these require interdisciplinary perspectives that cover software functionality, human interaction and communication experiences, and perceived value. After defining and summarizing current research and development, this book focuses on Mobile TV experience in everyday life, innovative conceptual and participatory design methods, contextual analysis methods, social context for interactive multimedia systems, advanced interaction with mobile digital content, and future trends for the wide range of products and services that will be offered in the decade to come. The Editors have carefully balanced the theoretical and empirical approaches providing a valuable insight into principles and methods, as well as actionable guidelines and recommendations for all those interested in exploring how to achieve the core objectives of usability, usefulness, and social appeal of this new mobile-video technology. The book answers many questions, and raises some new ones that only future technology development and deployment in mobile human-computer interaction and communication can answer.

Regulating Telecommunications in the EU and China Bernd Holznagel, Junqi Xu, Thomas Hart, 2009 Chinese as well as European regulatory decisions need to consider regional particularities but insist on an implementation system that never loses sight of its goal. In the area of electronic communications policy, this goal is the establishment of a market environment that ensures innovation, high quality and affordable prices. The present survey aims at improving the process of knowledge exchange between European and Chinese experts and decision-makers in Information Society law and policy. The EU-China Information Society Project asked the authors to assess both the EU's and the Chinese status quo, and to bring together both perspectives together in a joint effort to learn from the EU experiences for the Chinese decision-making process today.

Assembling Culture Tony Bennett, Chris Healy, 2013-10-31 If the social does not exist as a special domain but, in Bruno Latour's words, as 'a peculiar movement of re-association and reassembling', what implications does this have for how 'the cultural' might best be conceived? What new ways of thinking the relations between culture, the economy and the social might be developed by pursuing such lines of inquiry? And what are the implications for the relations between culture and politics? Contributors draw on a range of theoretical perspectives, including those associated with Deleuze and Guattari, Foucault, Law and Haraway, in order to focus on the roles of different forms of expertise and knowledge in producing cultural assemblages. What expertise is necessary to produce indigenous citizens? How does craniometry assemble the head? What kinds of knowledge were required to create markets for life insurance? These and other questions are pursued in this collection through a challenging array of papers concerned with cultural assemblages as diverse as brands and populations, bottled water and mobile television.

Digital Television Walter Fischer,2004-03-05 Digital Television deals with all present-day TV transmission methods, i.e. MPEG, DVB, ATSC and ISDB-T. The DVD Video is also discussed to some extent. The discussion is focussed on dealing with these subjects in as practical a way as possible. Although mathematical formulations are used, they are in most cases only utilized to supplement the text. The book also contains chapters dealing with basic concepts such as digital modulation or transformations into the frequency domain. A major emphasis is placed on the measuring techniques used on these various digital TV signals. Practical examples and hints concerning measurement are provided. The book starts with the analog TV baseband signal and then continues with the MPEG-2 data stream, digital video, digital audio and the compression methods. After an excursion into the digital modulation methods, all the mentioned transmission methods are discussed in detail. Interspersed between these are found the chapters on the relevant measuring technique.

The impending analogue switch-off will have a major impact on households all over the developed world. Digital Broadcasting considers the effects of digital television on the availability, price and nature of broadcast services in the Americas, Europe and Japan. It shows how this depends upon what platforms cable, satellite, fixed or wireless broadband countries have available for use and also upon government policies and regulatory interventions. The authors show how policies towards digital television are also closely linked with spectrum for example, whether to use spectrum released from analogue broadcasting for mobile communications or for broadcasting, including the newly developed mobile broadcasting. This is one of the key technological changes of the early 21st century and its development will affect many countries economies and societies. The book has an invaluable broad coverage of the economic and commercial issues involved in digital television in major regions and countries around the world.
