Mobile TV: Customizing Content and Experience Aaron Marcus,Anxo Cereijo Roibás,Riccardo Sala,2009-12-01 Developing usable, useful, and appealing solutions for the customer or user experience requires customization according to specific users' needs amidst frequently changing physical and social environments. Complex design problems like these require interdisciplinary perspectives that cover software functionality, human interaction and communication experiences, and perceived value. After defining and summarizing current research and development, this book focuses on Mobile TV experience in everyday life, innovative conceptual and participatory design methods, contextual analysis methods, social context for interactive multimedia systems, advanced interaction with mobile digital content, and future trends for the wide range of products and services that will be offered in the decade to come. The Editors have carefully balanced the theoretical and empirical approaches providing a valuable insight into principles and methods, as well as actionable guidelines and recommendations for all those interested in exploring how to achieve the core objectives of usability, usefulness, and social appeal of this new mobile-video technology. The book answers many questions, and raises some new ones that only future technology development and deployment in mobile human-computer interaction and communication can answer.

Designing a Business Model for Mobile TV on Mobile Devices Stephen Osei-Akoto,2018-04-26 Master's Thesis from the year 2010 in the subject Business economics - Business Management, Corporate Governance, grade: B, Aalborg University (CMI, Copenhagen Institute of Technology,), course: Masters degree in Information Communication Technology, language: English, abstract: The author studied the business model that will be suitable for deploying Mobile TV as a service to the user/customer, the market players and the providers involved in rolling out such as service. The research which was carried out in this project included finding a suitable business model to drive this service and also looking at the various technologies that is backing the mobile TV service. In order to know what pertains in Ghana and that of the outside world, the author conducted a small survey to seek the views of future and present customers of this service. Their responses were not too different from what have been reported by other surveys and analysts. During the project there was evidence that the operators and providers will need clearly defined roles in order for each member to be committed to the project and also to sustain the service. Despite the challenges outlined by experts in the industry, there is light at the end of the tunnel for Mobile TV service which is yet to be seen. The Europeans, the Americans and the Asians have already taken lead in this service and are constantly researching to make the service affordable, available, and interactive as possible and innovated than the traditional TV.

Nanometer CMOS RFICs for Mobile TV Applications Ahmed A. Youssef,James Haslett,2010-06-17 Nanometer CMOS RFICs for Mobile TV Applications focuses on how to break the trade-off between power consumption and performance (linearity and noise figure) by optimizing the mobile TV front-end dynamic range in three hierarchical levels: the intrinsic MOSFET level, the circuit level, and the architectural level. It begins by discussing the fundamental concepts of MOSFET dynamic range, including nonlinearity and noise. It then moves to the circuit level introducing the challenges associated with designing wide-dynamic range, variable-gain, broadband low-noise amplifiers (LNAs). The book gives a detailed analysis of a new noise-canceling technique that helps CMOS LNAs achieve a sub - 2 dB wideband noise figure. Lastly, the book deals with the front-end dynamic range optimization process from the systems perspective by introducing the active and passive automatic gain control (AGC) mechanism.

Mobile TV Syed A. Ahson,Borko Furht,2007-11 Addressing the topic of TV access from portable electronic devices, this guide covers all the issues—including which technologies to use, how to best use them, and how to deliver the service with guaranteed quality—and is a useful tool not only for those just getting into the mobile TV game, but also for those who have entered the ring but want an inside look at how competitors are faring.

Social TV Mike Proulx,Stacey Shepatin,2012-01-26 The Internet didn't kill TV! It has become its best friend. Americans are watching more television than ever before, and we're engaging online at the same time we're tuning in. Social media has created a new and powerful "backchannel", fueling the renaissance of live broadcasts. Mobile and tablet devices allow us to watch and experience television whenever and wherever we want. And "connected TVs" blend web and television content into a unified big screen experience bringing us back into our living rooms. Social TV examines the changing (and complex) television landscape and helps brands navigate its many emerging and exciting marketing and advertising opportunities. Social TV topics include: Leveraging the "second screen" to drive synched and deeper brand engagement Using social ratings analytics tools to find and target lean-forward audiences Aligning brand messaging to content as it travels time-shifted across devices Determining the best strategy to approach marketing via connected TVs Employing addressable TV advertising to maximize content relevancy Testing and learning from the most cutting-edge emerging TV innovations The rise of one technology doesn't always mean the end of another. Discover how this convergence has created new marketing opportunities for your brand.

Next Generation Mobile Broadcasting David Gómez-Barquero,2013-03-26 Next Generation Mobile Broadcasting provides an overview of the past, present, and future of mobile multimedia broadcasting. The first part of the book—Mobile Broadcasting Worldwide—summarizes next-generation mobile broadcasting technologies currently available. This part covers the evolutions of the Japanese mobile broadcasting standard ISDB-T One-Seg, ISDB-Tmm and ISDB-TSB; the evolution of the South Korean T-DMB mobile broadcasting technology AT-DMB; the American mobile broadcasting standard ATSC-M/H; the Chinese broadcasting technologies DTMB and CMMB; second-generation digital terrestrial TV European standard DVB-T2 and its mobile profile T2-Lite; and the multicast/broadcast extension of 4G LTE cellular standard E-MBMS. This part includes a chapter about a common broadcast specification of state-of-the-art 3GPP and DVB standards to provide a broadcast overlay optimized for mobile and operated in conjunction with a broadband unicast access. It also contains an overview chapter on a new High-Efficiency Video Coding (HEVC) standard that is expected to provide significantly improved coding efficiency compared to current MPEG-4 AVC video coding. The second part of the book—Next-Generation Handheld DVB Technology: DVB-NGH —describes the latest mobile broadcast technology known as Digital Video Broadcasting-Next-Generation Handheld (DVB-NGH), which is expected to significantly outperform all existing technologies in both capacity and coverage. DVB-NGH introduces new technological solutions that along with the high performance of DVB-T2 make DVB-NGH a powerful next-generation mobile multimedia broadcasting technology. In fact, DVB-NGH can be regarded as the first 3G broadcasting system because it allows for the possibility of using multiple input multiple output MIMO antenna schemes to overcome the Shannon limit of single antenna wireless communications. DVB-NGH also allows the deployment of an optional satellite component forming a hybrid terrestrial-satellite network topology to improve coverage in rural areas where the installation of terrestrial networks is economically unfeasible. Although the commercial deployment of DVB-NGH is nowadays unclear after its standardization, it will be a reference point for future generations of digital terrestrial television technologies. Edited by a member of the DVB-NGH standardization group, the book includes contributions from a number of standardization groups worldwide—including Digital Video Broadcasting (DVB) in Europe; Advanced Television Systems Committee (ATSC) in the US, Korea, Japan, and China; Third Generation Partnership Project (3GPP); and the Moving Picture Experts Group (MPEG).

The DVB-H Handbook Jyrki T. J. Penttinen,Petri Jolma,Erkki Aaltonen,Jani Väre,2009-11-12 A guide to implementing the DVB-H system for the carriage of MobileTV services, The DVB-H Handbook provides an overview of all aspects of the specification. Placing particular emphasis on the technical elements, it includes important information on the signalling and service discovery. The background, functioning, planning and optimisation of DVB-H are systematically explained for use in network planning and optimization. Subjects such as coding, different modes for channel delivery and protection in core and radio system are detailed. Giving examples on

the practical interpretation of the DVB-H specifications, this book also describes the process behind the realization of the end-to-end system. • Outlines the functioning, planning and optimization of the complete DVB-H system • Spans topics from physical network planning and link layer specifications, to application ingredients such as EPGs and audiovisual streaming technologies • Uses illustrations and selected case examples reflecting real-life practice to give greater understanding • Functions as an overview of the topic, as well as a tutorial for implementing the system • A must-read for beginners as well as established experts within the field of Mobile broadcasting

Mobile Video with Mobile IPv6 Daniel Minoli,2012-07-30 Increased reliance on mobile devices and streaming of video content are two of the most recent changes that have led those in the video distribution industry to be concerned about the shifting or erosion of traditional advertising revenues. Infrastructure providers also need to position themselves to take advantage of these trends. Mobile Video with Mobile IPv6 provides an overview of the current mobile landscape, then delves specifically into the capabilities and operational details of IPv6. The book also addresses 3G and 4G services, the application of Mobile IPv6 to streaming and other mobile video outputs, and closes with a chapter on future directions.
