**Petrophysics** Djebbar Tiab,Erle C. Donaldson,2024-03-29 Petrophysics, a seminal text in the field authored by recognized experts, now in its 5th edition, delivers information for reservoir engineers, production engineers and geoscience students fundamental to understanding rock-fluid interaction, and critical to maximizing reservoir performance while minimizing emissions and environmental impacts. This new edition lays a foundation through an introduction to petroleum geology, including an overview of pre- and post- carbon emission concerns, porosity and permeability, formation resistivity and water saturation, capillary pressure, wettability, applications of Darcy's Law, naturally fractured reservoirs, stress effects on reservoir rock, reservoir characterization and well logs, fluid-rock interactions, shale gas and shale oil in unconventional reservoirs, and culminates in current studies on permeability from practical interpretation of pressure and rate transient analysis of tight and shale reservoirs. Each chapter synthesizes relevant theory, studies and advances, methods, procedures, calculations, definitions, exercises and assignments designed to reinforce learning. • Continues its longstanding, 28-year history as the leading book on petrophysics • Captures advances in field technologies, reservoir evaluation and testing, porosity, permeability, updated calculations and indices in wettability, permeability, brittleness and fracability. • Includes up-to-date discussions on carbon footprints and strategies to reduce emissions • Each chapter synthesizes relevant theory, studies and advances, methods, procedures, calculations, definitions, exercises and assignments designed to reinforce learning

*Physics of Formation of FeII Lines Outside LTE* Roberto Viotti,Alberto A. Vittone,M. Friedjung,2013-04-17 The same kind of physics is frequently common to very different fields of Astrophysics, so experts in each of these fields have often much to learn from each others. It was therefore logical that the International Astronomical Union should sponsor a colloquium about an ion which produces many spectral lines that can be used as a diagnostic for many sorts of objects, and which may sometimes have a major influence on physical processes occurring in astrophysical sources. The lines of singly ionized iron (FeII) are present in absorption and emission in the spectra of objects such as the Sun, cool stars, circumstellar envelopes of hot stars, novae, diffuse nebulae including the supernova remnants, and active galactic nuclei. These lines are very often formed far from LTE, and their interpretation is not easy in view of the complex Grotrian diagram for FeII, and the gaps in the knowledge of various physical parameters. In addition, the density of very strong FeII lines becomes very large in the ultraviolet, and the lines can play a major role in the line blanketing. They need therefore to be taken into account in any energy balance argument.

**Asymmetric Planetary Nebulae VII** Quentin A. Parker,Noam Soker,2019-03-21 This book contains the best and most up-to-date contributions in the field of late stage stellar evolution, as presented at the APNVII conference in Hong Kong in December 2017. A total of 60 scientists from 20 countries gathered to present, listen, interact and discuss the most current issues and problems in planetary nebulae and related objects research. The emphasis of this influential series of meetings, which was the seventh occasion over the last 20 years, has always been on the hypothesized and observed physical shaping mechanisms of the ejected nebulae that have such wonderful and intriguing forms. This special Galaxies conference issue of fully refereed contributions brings together a representative compilation of the meeting presentations in paper form. It captures the current "snapshot" status of this research field in some real sense. Such proceedings are well received and can be used as a reference material by both participants and all others working in the field for years to come.

Myanmar's Education Reforms Marie Lall,2020-11-02 This book reviews the state of education in Myanmar over the past decade and a half as the country is undergoing profound albeit incomplete transformation. Set within the context of Myanmar's peace process and the wider reforms since 2012, Marie Lall's analysis of education policy and practice serves as a case study on how the reform programme has evolved. Drawing on over 15 years of field research carried out across Myanmar, the book offers a cohesive inquiry into government and non-government education sectors, the reform process, and how the transition has played out across schools, universities and wider society. It casts scrutiny on changes in basic education, the alternative monastic education, higher education and teacher education, and engages with issues of ethnic education and the debate on the role of language and the local curriculum as part of the peace process. In so doing, it gives voice to those most affected by the changing landscape of Myanmar's education and wider reform process: the students and parents of all ethnic backgrounds, teachers, teacher trainees and university staff that are rarely heard.

Myanmar Adam Simpson,Nicholas Farrelly,2023-10-05 This new edition of Myanmar: Politics, Economy and Society provides a sophisticated yet accessible overview of the key political, economic and social challenges facing contemporary Myanmar and explains the complex historical and ethnic dynamics that have shaped the country. Thoroughly revised, the book analyses the context and tragic consequences of the military coup in February 2021 and the COVID-19 pandemic. With clear and incisive contributions from the world's leading Myanmar scholars, this book assesses the policies and political reforms that have provoked contestation in Myanmar's recent history and driven both economic and social change. In this context, questions of economic ownership and control and the distribution of natural resources are shown to be deeply informed by long-standing fractures among ethnic and civil-military relations. The chapters analyse the key issues that constrain or expedite societal development in Myanmar and place recent events of national and international significance in the context of its complex history and social relations. The book provides detailed analysis of the coup, which overturned a decade of political and economic reforms and threw the country into chaos. It explains the drivers for the coup, how it has impacted on the country and the future prospects for accountability and justice. Filling a gap in the market, this research textbook and primer will be of interest to upper undergraduates, postgraduates and scholars of Southeast Asian politics, economics and society and to journalists and professionals working within governments, companies and other organisations.
