Singing Whales and Flying Squid Richard Ellis,2006-01-01 Two-thirds of this
planet is covered by water inhabited by an incredible variety of living
organisms, ranging in size from microbe to whale, and in abundance from
scarce to uncountable. Whales and dolphins must surface to breathe, and some
fishes occupy surface waters and can easily be seen from boats or shore, but
most of the marine bio-profusion is hidden from human eyes, often under
thousands of feet and millions of tons of water, which is usually cold, dark,
and utterly inhospitable to humans. By definition, the study of marine life
has been quantitatively and qualitatively different from the study of
terrestrial life--it is, if you will, a different kettle of fish. What do we
know today, how have we learned it, and what remains unknown and unknowable

about inner space? Because there have been so few human visitors to the uninviting world of the deep sea, scientists have had to rely on trawled specimens, photographs taken by robotic cameras, or occasionally, observations from deep-diving submersibles, to get even the vaguest idea of the nature of life in the abyss. So far, even our most elaborate efforts to penetrate the blackness have produced only minimal results. It is as if someone lowered a collecting basket from a balloon high above the tropical rain forest floor, and tried to analyze the nature of life in the jungle from a couple of random hauls. The inner space of the deep offers the last frontier on the planet. Even now, we know more about the back side of the moon than we do about the bottom of the ocean, but then the surface of the moon is not hidden under miles of impenetrable water. But we do know that living in this inaccessible medium are some of the most fascinating creatures on Earth. An understanding of the interrelationships between various creatures-including the one predator that has the power to distort, damage, or even eliminate populations of marine animals-is necessary if we are to survive in harmony with these populations. Although new technologies have given us tools to better census the whales, dolphins, and fishes, and to see heretofore unexpected life and geological forms deep under the sea, we are a long way from comprehending the nature and importance of marine biodiversity. *Singing Whales, Flying Squid, and Swimming Cucumbers* is an attempt to put the search for knowledge into perspective-to try to find out how we got here, and

where, with the help of curiosity, science, and technology, we might be headed. With this as our Baedeker, we will voyage through time and space, tracing the history of the discovery of marine biology, from the moment that the first scientists--although for the most part, science had barely been invented--tried to figure out what sorts of creatures lived in the Mediterranean, the sea right off their shores. So join Richard Ellis on an underwater adventure like no other you've ever taken or heard of: a voyage to discover the mysteries and reveal the wonders of marine life--more unusual and more astonishing than you--or anyone else--ever imagined.

Luxury Toys Mega Yachts Espen Oeino, Nick Jeffery, 2008 In the rarefied world of mega yachts, one name is respected above all others-Espen Oino. The top star in naval architecture, Oino's creations combine the precision of fine machinery with indulgent finishes and the high-end amenities of a palace. Scientists and the Sea, 1650-1900 Margaret Deacon, 2018-04-17 Scientists and

the Sea is a history of how the scientific study of the sea has developed over a period of nearly 2500 years. Beginning with the speculations of Greek philosophers it carries the story forward, showing how curiosity about the ocean appeared in many different forms and locations before, in the late 19th century, the first deep-sea researches heralded the foundation of the science known today as oceanography. Originally published in 1971, this book has never been superseded as the most comprehensive and wide-ranging treatment of the emergence of marine science within the western scientific tradition. After three introductory chapters dealing with knowledge up to the Renaissance, the main part of the work shows how pioneers of scientific observation at sea during the 17th and 18th centuries made notable discoveries, but that it was not until the middle of the 19th century when, aided by the advance of technology, scientists were able to undertake the first explorations of the ocean depths. This second edition contains a new introduction and bibliography.

A History of Immunology Arthur M. Silverstein, 2012-12-02 This is a professional-level intellectual history of the development of immunology from about 1720 to about 1970. Beginning with the work and insights of the early immunologists in the 18th century, Silverstein traces the development of the major ideas which have formed immunology down to the maturation of the discipline in the decade following the Second World War. Emphasis is placed on the philosophic and sociologic climate of the scientific milieu in which immunology has developed, providing a background to the broad culture of the discipline. A professional-level intellectual history of the development of immunology from about 1720 to 1970, with emphasis placed on the social climate of the scientific milieu in which modern immunology evolved Written by an author very well known both as a historian of medical science and for his substantial research contributions to the immunopathology of the eye The only complete history of immunology available
