The Moon Moon,1857

Moon Stories John Halajian,2007 How does one go about researching an object that seems a world away? Moon Stories: A Road Map to Lunar Exploration and Beyond follows author John Halajians journey through and contribution to the lunar science and space exploration program that landed men on the moon in the 1960s. As a consultant for NASA in lunar science and exploration, Halajian pioneered technologies such as digital imaginghis story is one of hard work and determination for advancements tickling the imaginations of the scientific community. Not only a story of science and technology, Moon Stories is the tale of one man, his passion for knowing the unknown, and mankind's desire to reach beyond the here and now.

The Moon Ralph Winrich,2005 Discusses the orbit, atmosphere, surface features, and exploration of the Moon.

The Moon William Henry Pickering,1903

The Moon-Maker Arthur Train,Robert Williams Wood,2013-04-15 Now with an Historical Afterword by Ron MillerIncludes the original illustrations
Featured in Ron Miller's _The Conquest of Space Book Series.Ó An atomic-powered spaceship on a mission to divert an asteroid from an impending collision with earth might sound like an up-to-date SF scenario...unless the book was written in 1916! Discoverer of the asteroid and passenger on the dangerous space mission is beautiful Rhoda Gibbs, an extraordinary woman 50 years ahead of her time. The novel's science is impeccable and remains accurate even by today's standards. Includes the prequel, The Man Who Rocked the Earth, which includes the first-ever realistic description of a nuclear explosion...right down to the gruesome effects of lingering radiation poisoning. At the publisher's request, this title is sold without DRM (Digital Rights Management).

Journey to Harvest the Moon Robert Wilton Dale,2006-03-21 This, the second book of the trilogy, will stretch the limits of space, time and religion, as we know them. It is an epic journey by this dauntless crew to collect the third, powerful, crystal core before a madman and his followers can get their hands on it. This sequel takes the reader to our Moon, Mars and the Stars in an effort to find the answers we have sought since the beginning of intelligent thought.

The Measure of the Moon Ralph B. Baldwin,1963

Making Moon: A British Sci-Fi Cult Classic Simon Ward,2019-10-15 The official 10th anniversary making-of book for the Duncan Jones directed sci-fi film Moon. Directed by Duncan Jones, and written by Nathan Parker from a story by Jones, Moon is a 2009 science fiction drama following Sam Bell, a man who experiences a personal crisis as he nears the end of a three-year solitary stint mining helium-3 on the moon. Independently financed and produced on a modest budget, Moon became an instant cult classic. It was well received by critics and audiences alike, and was particularly praised for its scientific plausibility and realism. Making Moon will take an in-depth look back at the film's production: It features interviews with the film's key creatives and includes rare concept and behind-the-scenes images, as well as excerpts from the original shooting script.

The Moon David Whitehouse,2016-04-07 In *The Moon* David Whitehouse explains how our nearest celestial neighbor was created (and what moonrocks tell us of its earth-shattering origins), and how its existence may have been a crucial factor in mankind being here at all. Whitehouse discusses how man has related to it, worshipped it and blamed it for his own 'lunacy' - though can it really affect our behavior? He tells how the first person to look at the moon through a telescope was not Galileo, as is commonly believed, but an Englishman who knew Shakespeare and had a part in the Gunpowder Plot. While some of the story of the modern moon race may be known, the first moon race to map its surface has not been charted before, and is one of the most dramatic and unexpected stories in science. The recent discovery of ice hidden in the moon's polar regions opens up new possibilities for space travel that mean it is essential that mankind returns there if we are ever to journey to the rest of the solar system.

Full Moon Michael Light,Andrew Chaikin,1999 The most thrilling of all journeys--the missions of the Apollo astronauts to the surface of the Moon and back--yielded 32,000 extraordinarily beautiful photographs, the record of a unique human achievement. Until recently, only a handful of these

photographs had been released for publication; but now, for the first time, NASA has allowed a selection of the master negatives and transparencies to be scanned electronically, rendering the sharpest images of space that we have ever seen. Michael Light has woven 129 of these stunningly clear images into a single composite voyage, a narrative of breathtaking immediacy and authenticity that begins with the launch and is followed by a walk in space, an orbit of the Moon, a lunar landing and exploration, and a return to Earth with an orbit and splashdown. Graced by five 45-inch-wide gatefolds that display the lunar landscape, from above the surface and at eye level, in unprecedented detail and clarity, *Full Moon* conveys on each page the excitement, disorientation, and awe that the astronauts themselves felt as they were shot into space and then as they explored an alien landscape and looked back at their home planet from hundreds of thousands of miles away. Published on the thirtieth anniversary of Apollo 11--the first landing on the Moon--this remarkable and mesmerizing volume is, like the voyages it commemorates and re-creates, an experience both intimate and monumental.

A Popular Inquiry Into the Moon's Rotation on Her Axis Johannes von Gumpach, 1856

The Moon Metal Garrett P. Serviss, 2004-10 When the news came of the discovery of gold at the south pole, nobody suspected that the beginning had been reached of a new era in the world's history. The newsboys cried Extra! as they had done a thousand times for murders, battles, fires, and Wall Street panics, but nobody was excited. In fact, the reports at first seemed so exaggerated and improbable that hardly anybody believed a word of them. Who could have been expected to credit a despatch, forwarded by cable from New Zealand, and signed by an unknown name, which contained such a statement as this:

All About the Moon Wes Lipschultz, 2002-01-01 This book discusses the formation of the moon, the physical characteristics of the moon, and the effect of the moon's gravity on Earth's oceans.

Red Moon Michael Cassutt,2001 Yuri Ribko grows from engineering student to Cosmonaut under the secret control of his KGB uncle. This fascinating thriller takes the reader deep into the heart of the Soviet space program--its successes and its heart-breaking failures--and shows the human face on the other side of the Iron Curtain.

Dark Side of the Moon Gerard Degroot,2006-11 Discusses the myths constructed by the Eisenhower, Kennedy, and Johnson administrations that were used to exploit American fears of what Russians would do in space.
