Mountain Veronica della Dora, 2016-09-15 Majestic and awe-inspiring, there is nothing like the sight of a mountain on the horizon. Throughout all of human history mountains have been linked to the eternal, attracting us to their dizzying heights, stunning us with their natural beauty, and often threatening us with their dangers. Through a compelling journey to both real and imaginary peaks, this book explores how the mountain has figured in our history, culture, and imaginations. Veronica della Dora explores the ways mountains have functioned spiritually as a boundary between life and death, a bridge between the earth and the heavens. Interlacing science, culture, and religion, she sketches the mountain as a geological phenomenon that has profoundly influenced and been influenced by the human imagination, shaping our environmental consciousness and helping us understand our—quite small indeed—place in the world. She also explores their significance as objects of human feats, as prizes of adventure and sport, and as places of serene beauty for vacationers. Magnificently illustrated and showcasing famous peaks from all around the world, *Mountain* offers a fascinating dual portrait of these giants in nature and culture.

Mountain Nature Jennifer Frick-Ruppert, 2010-04-15 The Southern Appalachians are home to a breathtakingly diverse array of living things--from delicate orchids to carnivorous pitcher plants, from migrating butterflies to flying squirrels, and from brawny black bears to more species of salamander than anywhere else in the world. *Mountain Nature* is a lively and engaging account of the ecology of this remarkable region. It explores the animals and plants of the Southern Appalachians and the webs of interdependence that connect them. Within the region's roughly 35 million acres, extending from north Georgia through the Carolinas to northern Virginia, exists a mosaic of habitats, each fostering its own unique natural community. Stories of the animals and plants of the Southern Appalachians are intertwined with descriptions of the seasons, giving readers a glimpse into the interlinked rhythms of nature, from daily and yearly cycles to long-term geological changes. Residents and visitors to Great Smoky Mountains or Shenandoah National Parks, the Blue Ridge Parkway, or any of the national forests or other natural attractions within the region will welcome this appealing introduction to its ecological wonders.

The Mountain Reader John A. Murray, 2000 This Nature Conservancy volume celebrates the mountains of the world with 23 literary works that range over three continents and 200 years. Includes John Muir on the Sierra Nevadas, Henry David Thoreau on Maine's Ktaadn, and more.

48 Mountains Dendrologist Forest Authority John White, John White, 2016-05-26 What starts out as a seemingly impossible dream conceived as a teenager, turns into John's personal quest to stand on top of the highest point of every state in the United States of America. He almost accomplished his dream, but on a high ridgeline on his 44th mountain, he was struck by a bolt of lightning in the midst of a freak storm. The fear that hit him at that moment prevented him from ever climbing another mountain again. Many challenges and obstacles faced John during his adventures, but he was always able to persevere until that fateful day on top of Utah when all his highpointing hopes and dreams were gone in a painful flash of light. This pain was not only physical, but played on his mental state as well. This dream that he had worked so hard for and spent so much time and energy on was taken away by fears he did not know he had; fears that were not understood. These fears brought White's highpointing dream to an abrupt end at the base of Borah Peak, Idaho's highest mountain just months after his terrifying experience. *48 Mountains* is the exhilarating story of his quest and a moving reflection on the nature of fear.

The West Side of Any Mountain J. Scott Bryson, 2005-04-01 In contrast to nature poets of the past who tended more toward the bucolic and pastoral, many contemporary nature poets are taking up radical environmental and ecological themes. In the last few years, interesting and evocative work that examines this poetry has begun to lay the foundation for studies in ecopoetics. Informed in general by current thinking in environmental theory and specifically by the work of cultural geographer Yi-Fu Tuan, *The West Side of Any Mountain* participates in and furthers this scholarly attention by offering an overarching theoretical framework with which to approach the field. One area that contemporary theorists have found problematic is the dualistic civilization/wilderness binary that focuses on the divisions between culture and nature, thereby increasing the modern sense of alienation. Tuan's place-space framework offers a succinct vocabulary for describing the attitudes of ecological poets and other nature writers in a way that avoids setting up an adversarial relationship between place and space. Scott Bryson describes the Tuanian framework and employs it to offer fresh readings of the work of four major ecopoets: Wendell Berry, Joy Harjo, Mary Oliver, and W. S. Merwin. *The West Side of Any Mountain* will be of great interest to scholars and teachers working in the field of contemporary nature poetry. It is recommended for nature-writing courses as well as classes dealing with 20th-century poetry, contemporary literary criticism, and environmental theory.

Mountains of the Heart Scott Weidensaul,2016-05-01 Part natural history, part poetry, Mountains of the Heart is full of hidden gems and less traveled parts of the Appalachian Mountains Stretching almost unbroken from Alabama to Belle Isle, Newfoundland, the Appalachians are one of the oldest mountain ranges in the world. In Mountains of the Heart, renowned author and avid naturalist Scott Weidensaul shows how geology, ecology, climate, evolution, and 500 million years of history have shaped one of the continent's greatest landscapes into an ecosystem of unmatched beauty. This edition celebrates the book's 20th anniversary of publication and includes a new foreword from the author.

To Think Like a Mountain Niels Sparre Nokkentved,2021-06-22 In the West, shortsighted human self-interest has resulted in devastating environmental losses. The fur trade decimated beaver populations, and streams and wetland ecosystems deteriorated. Though most mining ceased by the late 1920s, water running from the Pacific Mine nearly a century later still carried ten times the lead level standard set by the federal Clean Water Act. Where grazing depleted native bunchgrasses, fire-prone cheatgrass grew in its place. Migrating from Idaho streams, salmon once reached the ocean in ten to fourteen days. Now it takes fifty or more. In 2016, a snowstorm blew a flock of snow geese off course. They landed on contaminated water, and about three thousand died. Author Niels S. Nokkentved takes a fresh look at environmental challenges affecting Northwest residents. His essays examine cultural conflicts over resource extraction, threats to watersheds from abandoned mines, wolf recovery in the northern Rocky Mountains, the lingering effects of livestock grazing on western rangelands, and the rapidly disappearing sage grouse. They discuss the importance of forest fires, the value of beavers, the failed promises of salmon hatcheries, the reasons behind the decline of the timber industry in the Pacific Northwest, and how unlikely allies learned to set aside their differences in order to resolve long-standing disputes. Nokkentved's goal is to encourage people to think like a mountain--in other words, to consider the long-term consequences. He shares his connection to each concern as well as his own evidence-based perspective. He believes that it most profits society--collectively and as individuals--when people respect the balance of nature, and he wants to draw others to the same conclusion.
