Garske, M.S., P.T., 2013-04-07 If you're one of the millions who use computers at work or at home, the hours you spend in front of the monitor could be giving you a pain in the neck, back, hand, wrist, or arm. If so, you may be suffering from CRS. Tightness, stiffness, and pain of the upper extremities are common complaints of writers and computer users. Carpal tunnel pain, repetitive strain injuries, occupational disorders of the upper extremities, and other problems related to heavy keyboard and computer use have spread across the nation as computers become indispensable at work and at home. Classified under the rubric computer-related syndrome, or CRS for short, these injuries have caused a work slowdown, while creating a whole field of medical exploration. CRS: The Prevention & Treatment of Computer-Related Injuries by rheumatologist Dr. Richard Dean Smith and physical therapist Steve Garske calls attention to the common problems of computer use and offers practical advice and helpful hints intended to lessen the risk of sustaining injuries related to posture, rapid movements, and positional errors common to writers, computer users, and other occupations. Everyone needs to be informed of the dangers involved, as well as successful prevention techniques and helpful remedies when injury does occur. The book includes a history of CRS, information on symptoms, clinical findings, effects on work, and where to get help.

Customizable Computing Yu-Ting Chen, Jason Cong, Michael Gill, Glenn Reinman, Bingjun Xiao, Zhiyang Ong, 2015-07-01 Since the end of Dennard scaling in the early 2000s, improving the energy efficiency of computation has been the main concern of the research community and industry. The large energy efficiency gap between general-purpose processors and application-specific integrated circuits (ASICs) motivates the exploration of customizable architectures, where one can adapt the architecture to the workload. In this Synthesis lecture, we present an overview and introduction of the recent developments on energy-efficient customizable architectures, including customizable cores and accelerators, on-chip memory customization, and interconnect optimization. In addition to a discussion of the general techniques and classification of different approaches used in each area, we also highlight and illustrate some of the most successful design examples in each category and discuss their impact on performance and energy efficiency. We hope that this work captures the state-of-the-art research and development on customizable architectures and serves as a useful reference basis for further research, design, and implementation for large-scale deployment in future computing systems.
