*Nutritional Failure in Ecuador* ,2007-01-01 Malnutrition - especially, the stunting of children under five - is arguably Ecuador's biggest development challenge. Like other Andean countries (such as Peru and Bolivia), Ecuador has a persistently high stunting rate, well above what would be expected given its middle income status. Even more worrying, over the last decade, the trend reduction has virtually stopped. The study supports the development of a more coherent and effective nutrition strategy in Ecuador through an analysis of the main nutrition issues, based on in-depth statistical analysis of a large new household survey dataset (ENDEMAIN 2004) and other data sources, together with a review of qualitative evidence regarding behavioral and program-access obstacles to improved nutritional outcomes. It also reviews the existing programs and policies which aim to improve nutritional outcomes, considered the available evidence on the efficiency, effectiveness, targeting and inter-programmatic coherence of the programs and projects reviewed and suggests an agenda for policy discussions to improve these outcomes.

Performance Evaluation of Supercomputers Joanne L. Martin,1988 Although supercomputer systems are faster, and have larger memory hierarchies than other computer systems, such characteristics merely imply the existence of great potential power. How much of that power can be harnessed productively is the central theme of performance evaluation. A set of methods for evaluating the performance of applications on supercomputers has not yet been rigorously defined. This volume is a compilation of research approaches and techniques that are a promising means to that end. The contributions are grouped into three sections. Contributors to Performance looks at applications, algorithms, compilers, operating systems, and memory issues. Measurements and Metrics addresses some of the current techniques and methods of performance evaluation. Among the topics are: the performance monitoring capabilities of the CEDAR system, the methodology behind the Livermore loops, the empirical analysis of system performance, and a software simulator developed in connection with the RP3 project. Methods, Models, and Directions looks at ways of establishing a general and theoretical framework for supercomputer performance evaluation.

*Modeling of Carbon Nanotubes, Graphene and their Composites* Konstantinos I. Tserpes,Nuno Silvestre,2013-10-15 A large part of the research currently being conducted in the fields of materials science and engineering mechanics is devoted to carbon nanotubes and their applications. In this process, modeling is a very attractive investigation tool due to the difficulties in manufacturing and testing of nanomaterials. Continuum modeling offers significant advantages over atomistic modeling. Furthermore, the lack of accuracy in continuum methods can be overtaken by incorporating input data either from experiments or atomistic methods. This book reviews the recent progress in continuum modeling of carbon nanotubes and their composites. The advantages and disadvantages of continuum methods over atomistic methods are comprehensively discussed. Numerical models, mainly based on the finite element method, as well as analytical models are presented in a comparative way starting from the simulation of isolated pristine and defected nanotubes and proceeding to nanotube-based composites. The ability of continuum methods to bridge different scales is emphasized. Recommendations for future research are given by focusing on what still continuum methods have to learn from the nano-scale. The scope of the book is to provide current knowledge aiming to support researchers entering the scientific area of carbon nanotubes to choose the appropriate modeling tool for accomplishing their study and place their efforts to further improve continuum methods.

**Handbook of Research on Big Data and the IoT** Kaur, Gurjit,Tomar, Pradeep,2019-03-29 The increase in connected devices in the internet of things (IoT) is leading to an exponential increase in the data that an organization is required to manage. To successfully utilize IoT in businesses, big data analytics are necessary in order to efficiently sort through the increased data. The combination of big data and IoT can thus enable new monitoring services and powerful processing of sensory data streams. The Handbook of Research on Big Data and the IoT is a pivotal reference source that provides vital research on emerging trends and recent innovative applications of big data and IoT, challenges facing organizations and the implications of these technologies on society, and best practices for their implementation. While highlighting topics such as bootstrapping, data fusion, and graph mining, this publication is ideally designed for IT specialists, managers, policymakers, analysts, software engineers, academicians, and researchers.

Composite Materials Luigi Nicolais,Michele Meo,Eva Milella,2011-05-18 Composite Materials presents recent developments and state-of-the-art achievements in the science and technology of composites. It identifies and discusses key and emerging issues for future progress in the multidisciplinary field of composites. By bringing together leading experts and promising innovators from research institutions and academia, Composite Materials highlights unresolved issues and identifies opportunities for long-term research needs to provide the reader with a vision for the future in various fields of application of composite materials. A few of the many future directions highlighted in the book are increasingly multifunctional properties; complex, hybrid and nanoreinforced materials; and tailoring in multiple dimensions and directions. The wider areas covered include, but are not limited to, the following: biomedical engineering, civil engineering, aerospace engineering, automotive engineering, and naval engineering. Composite Materials is designed to increase the reader's understanding of the state of the art of composite materials in a variety of industrial sectors and to explore future needs and opportunities. It will therefore be of use to professionals working in the composites industry, research centers, and academia, who already have a graduate-level knowledge of composite materials.

Insects of the Los Angeles Basin Charles Leonard Hogue,1993 Southern California is home not only to the country's second largest metropolitan center but to an estimated 3,000 to 4,000 different kinds of insects. Insects of the Los Angeles Basin provides an introduction to more than 400 of the most conspicuous or curious of these invertebrate animals and to about 70 spiders, mites and ticks, and related forms. With color photographs or drawings of all but a few species, the text describes the size and most striking physical characteristics of adults and immature stages and gives information on locomotion and behavior, offensive and defensive maneuvers, mating rituals, food preferences, nests and traps, and noises and scents. The specific habitat and general geographic range of each insect are included, as are lore and superstition regarding some notorious species. The author, Dr. Charles L. Hogue, has answered the questions that he was most often

asked in his position as Curator of Entomology at the Natural History Museum of Los Angeles County. The result is a highly readable text with an emphasis on the effects that insects have on the people who encounter them.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. **The Dopamine Receptors** Kim Neve,Rachael L. Neve,2013-03-09 Seven years after the cloning of the rat dopamine D receptor, and four 2 years after the cloning of the last mammalian dopamine receptor identified to date, this seems to be an excellent time to put together the present The Dopamine Receptors volume ofthis series, The Receptors. There has been time for considerable characterization of the novel receptor subtypes, and new, exciting lines of research from the molecular to the behavioral levels are taking shape. We asked the contributors to The Dopamine Receptors to follow the superb example set by the previous volumes in this series by writing compre hensive, historical reviews that will comprise an essential resource for nonspe cialists and newcomers to the dopamine receptor field, while at the same time providing up-to-date summaries of the most active areas of research. It is difficult these days to write about receptors without addressing the issue of receptor nomenclature. For dopamine receptors, valid arguments can be made for a system in which the subtypes are classified as belonging to the D1 or D2 classes, with letters assigned in the order of cloning (D A, D , D A, 1 18 2 D , Dc). We decided, however, that common usage counts for something, and 28 2 chose to use D , D , and D for the D2-like receptors because these names are 2 3 4 nearly unanimously used in the literature.
