**Exergy Analysis of the Air Handling Unit at Variable Reference Temperature** Vytautas Martinaitis,Giedrė Streckienė,Juozas Bielskus,2022-03-25 This book explore how exergy analysis can be an important tool for assessing the sustainability of buildings. Building's account or around 40 percent of total energy conditions depending on local climatic conditions. Due to its nature, exergy analysis should become a valuable tool for the assessment of building sustainability, first of all considering their scope and the dependence of their energy demands on the local environmental and climatic conditions. Nonetheless, methodological bottlenecks do exist and a solution to some of them is proposed in this monograph. First and foremost, there is the still-missing thermodynamically viable method to apply the variable reference environment temperature in exergy analysis. The monograph demonstrates that a correct approach to the directions of heat exergy flows, when the reference temperature is considered variable, allows reflecting the specifics of energy transformation processes in heating, ventilation, and air conditioning systems in a thermodynamically viable way. The outcome of the case analysis, which involved coordinated application of methodologies based on the Carnot factor and coenthalpies, was exergy analysis indicators – exergy efficiency and exergy destroyed – obtained for air handling units and their components. These methods can be used for the purposes of analysing and improving building technical systems that, as a rule, operate at a variable environment temperature. Exergy analysis becomes more reliable in designing dynamic models of such systems and their exergy-based control algorithms. This would improve the possibility to deploy them in building information modelling (BIM) technologies and the application of life cycle analysis (LCA) principles in designing buildings, thus improving the quality of the decision-making process. Furthermore, this would benefit other systems where variable reference environment plays a key role. This book is relevant to academics, students and researchers in the field of thermodynamic analysis considering HVAC equipment, building energy systems, energy efficiency, sustainable development of technical systems of energy, mechanics, and construction, as well as preservation of natural resources. Planners, designers, engineers of HVAC equipment, building energy systems, and developers of appropriate simulation tools (e.g., BIM) will also find it of use.

Ellavut / Our Yup'ik World and Weather Ann Fienup-Riordan,Alice Rearden,2013-08-27 Ellavut / Our Yup'ik World and Weather is a result of nearly ten years of gatherings among Yup'ik elders to document the qanruytet (words of wisdom) that guide their interactions with the environment. In an effort to educate their own young people as well as people outside the community, the elders discussed the practical skills necessary to live in a harsh environment, stressing the ethical and philosophical aspects of the Yup'ik relationship with the land, ocean, snow, weather, and environmental change, among many other elements of the natural world. At every gathering, at least one elder repeated the Yup'ik adage, The world is changing following its people. The Yup'ik see environmental change as directly related not just to human actions, such as overfishing or burning fossil fuels, but also to human interactions. The elders encourage young people to learn traditional rules and proper behavior--to act with compassion and restraint--in order to reverse negative impacts on their world. They speak not only to educate young people on the practical skills they need to survive but also on the knowing and responsive nature of the world in which they live.

**A Person My Colour** Dahlmanns, Martina,2018-09-20 If you are tired of hearing about ‘whiteness’, and if you think racism exists in the hearts of evil others, or you believe that having a black friend unshackles you from racism’s hold, I dare you to read this book. – Pumla Gobodo-Madikizela Martina Dahlmanns, the daughter of parents who grew up in the shadow of post-war Germany, an adoptive mother of children who are black, and a member of a dialogue group of black and white women, urgently questions the very depths of what it means to be white in South Africa today. Her deeply personal memoir is unsettling because of what it reveals simultaneously about the enduring impact of inherited privilege and the repercussions of disadvantage Her book is unsettling, precisely because of what it reveals simultaneously about the enduring impact of inherited privilege and the repercussions of disadvantage. But it is Dahlmanns’ dialogue with Tumi Jonas–whose own reflections appear in the last section of the book–that reveals so much of what’s possible, yet potentially destructive, in relationships between black and white South Africans today.

**Christmas Trees Lit the Sky** Anneliese Heider Tisdale,2012-11-08 The Heider family huddles together in the basement, wondering if this is the last day they will be together, if this is the last day of their lives. Its Munich, Germany, in 1945, the day American tanks are rolling in. Annelieses father finds a white sheet, ready to hang it from the attic window, hoping he times it right. Too early, and German SS forces could open fire. Too late, and the Allied forces could shoot. Thank god, its not the Russians. And so begins the memoir of Anneliese Heider Tisdale, who grew up in Germany during World War II. Hers is a universal and timeless tale of war and death, of fear and deprivation, of the inventiveness of children who want to dance and wear new clothes but instead have childhoods filled with bandages and bombs, who return to school one fall to find the crucifix in their classroom replaced with a picture of the Fhrer.

The Greatest Love of My Life Rodney Tupweed, Climate Change and Regional/Local Responses Pallav Ray,Yuanzhi Zhang,2013-05-22 Understanding climate change requires analysis of its effects in specific contexts, and the case studies in this volume offer examples of such issues. Its chapters cover tropical cyclones in East Asia, study of a fossil in Brazils Araripe Basin and the fractal nature of band-thickness in an iron formation of Canadas Northwest Territories. One chapter examines the presence of trace elements and palynomorphs in the sediments of a tropical urban pond. Examples of technologies used include RS- GIS to map lineaments for groundwater targeting and sustainable water-resource management, the ALADIN numerical weather-prediction model used to forecast weather and use of grids in numerical weather and climate models. Finally, one chapter models sea level rises resulting from ice sheets melting.
